

CONTENTS

<i>Preface</i>	<i>page</i>	<i>ix</i>
1 Probability		
Introduction		1
1.1 The concept of a frequency limit		3
1.2 The axioms of probability		6
1.3 Independence		14
1.4 Bayes's theorem		19
1.5 Genetical applications		25
1.6 Degrees of belief		29
Exercises		42
2 Probability distributions: one variable		
2.1 The discrete case		49
2.2 The continuous case		57
2.3 The Poisson process		63
2.4 Features of distributions		74
2.5 The simple random walk		82
2.6 Generating functions		91
Exercises		97
3 Probability distributions: several variables		
3.1 The discrete case		107
3.2 The continuous case		117
3.3 Linear functions of random variables		126

Cambridge University Press
978-0-521-29867-4 - Introduction to Probability and Statistics: From a Bayesian
Viewpoint, Part 1 - Probability
D. V. Lindley
Table of Contents
[More information](#)

viii	CONTENTS	
3.4	Approximate means and variances	<i>page</i> 134
3.5	Exact methods	139
3.6	Limit theorems	150
	Exercises	160
4	Stochastic processes	
4.1	Immigration–emigration process	174
4.2	Simple queueing process	187
4.3	Queueing process with Poisson input and general service distribution	193
4.4	Renewal theory	203
4.5	Markov chains	215
4.6	Markov chains (continued)	227
	Exercises	235
	<i>Bibliography</i>	249
	<i>Subject Index</i>	253
	<i>Index of Notations</i>	258
