

## Contents

Preface	vii
<b>1 Interfacial free energy and the <math>\gamma</math>-plot</b>	
1.1 The free energy of an interface	1
1.2 Surface tension and its relation to surface free energy	
1.3 The $\gamma$ -plot and the 'terrace-ledge-kink' model of a surface	3
1.4 Pairwise bonding models	5
1.5 Effect of temperature on the $\gamma$ -plot	7
1.6 Equilibrium shape of a surface	9
<i>General reading</i>	11
<b>2 The experimental determination of the solid-liquid interfacial free energy <math>\gamma_{SL}</math></b>	12
2.1 Methods of interface intersections	12
2.2 Interface intersections methods for $\gamma_{SL}$	16
2.3 Homogeneous nucleation in the liquid-solid transition	21
2.4 Heterogeneous nucleation in the liquid-solid transition	31
2.5 Nucleation in the solid-liquid transition	32
2.6 Other methods for determining $\gamma_{SL}$	36
2.7 Experimental determinations of the shape of the $\gamma$ -plot for $\gamma_{SL}$	37
<i>Further reading</i>	38
<b>3 The structure of the solid-liquid interface</b>	39
3.1 Singular and non-singular interfaces	39
3.2 Jackson's (1958) theory of the interface structure	40
3.3 Comparison of Jackson's predictions with experiment	46
3.4 Jackson's theory in perspective	48
3.5 Temkin's $n$ -layer model of the interface	51
3.6 Interface morphologies during melting	57
3.7 The structure of the interface in alloy systems	59
<i>Further reading</i>	62
<b>4 Non-structural views of the solid-liquid interface</b>	63
4.1 Introduction	63
4.2 Theories of melting	64

vi	<i>Contents</i>	
	4.3 The thickness of the solid–liquid interface	67
	4.4 Theoretical calculations of $\gamma_{SL}$	73
	<i>Further reading</i>	76
	<b>5 Morphological stability</b>	77
	5.1 Introduction	77
	5.2 Steady-state growth conditions for a binary alloy	78
	5.3 Constitutional supercooling	80
	5.4 Mullins and Sekerka’s analysis of planar interface stability	85
	5.5 The influence of interface kinetics on stability	93
	5.6 Time evolution of instabilities	95
	5.7 Experimental studies on constitutional supercooling	97
	5.8 The stability of a melting interface	99
	<i>Further reading</i>	100
	<b>6 Dendritic growth</b>	101
	6.1 The origins and occurrence of dendritic growth	101
	6.2 The stability of a growing spherical nucleus	102
	6.3 The stability of a growing rod	108
	6.4 A steady-state description of a dendrite cap	113
	6.5 Dendritic branching	115
	6.6 Cast structures and dendrites	118
	<i>Further reading</i>	120
	<b>7 Eutectic growth</b>	121
	7.1 Introduction	121
	7.2 Lamellar eutectics	123
	7.3 Rod growth and the lamellar–rod transition	132
	7.4 Eutectic range	136
	7.5 Other structures	143
	<i>Further reading</i>	149
	<b>8 Mechanisms and kinetics of crystal growth</b>	151
	8.1 Introduction: two-dimensional nucleation	151
	8.2 Screw dislocation growth mechanisms	154
	8.3 ‘Continuous’ or ‘normal’ growth	157
	8.4 A unifying theory	158
	8.5 Experiments on growth kinetics	163
	8.6 Mechanisms and kinetics of melting	171
	<i>Further reading</i>	173
	References	175
