Editor's Statementxi
Section Editor's Foreword	xiii
Preface	xvii
Chapter 1. The Theory of Permanents in the Historical Order of Development	1
1.1. Introduction	1
1.2. The Originators: Binet and Cauchy	2
1.3. The Continuator: Borchardt, Cayley, and the Master from Edinburgh—Sir Thomas Muir	5
1.4. Renaissance of Permanents: Muirhead's Theorem, Pólya's Problem, Schur's Inequality, and van der Waerden's Conjecture	8
1.5. The New Era: Marvin Marcus and Company	12
Problems	14
Chapter 2. Properties of Permanents	15
2.1. Elementary Properties	15
2.2. The Permanent Function as an Inner Product	19
Problems	26
Chapter 3. (0, 1)-Matrices	29
3.1. Incidence Matrices	29
3.2. Theorems of Forbenius and König	31
3.3. Structure of Square (0, 1)-Matrices	34
3.4. (0, 1)-Circulants	44
Problems	48
Chapter 4. Lower Bounds for Permanents	51
4.1. Marshall Hall's Theorem	51
4.2. (0, 1)-Matrices	53

4.3.	Fully Indecomposable (0, 1)-Matrices	57
4.4.	Nonnegative Matrices	62
4.5.	Positive Semi-definite Hermitian Matrices	66
	Problems	71
Chapter 5.	The van der Waerden Conjecture	73
5.1.	The Marcus–Newman Theory	73
5.2.	Properties of Minimizing Matrices	81
5.3.	Some Partial Results. Friedland’s Theorem	86
5.4.	A Conjecture of Marcus and Minc	91
5.5.	Lower Bounds for the Permanents of Doubly Stochastic Matrices	95
	Problems	100
Chapter 6.	Upper Bounds for Permanents	103
6.1.	From Muir to Jurkat and Ryser	103
6.2.	(0, 1)-Matrices	107
6.3.	Nonnegative Matrices	110
6.4.	Complex Matrices	113
	Problems	116
Chapter 7.	Evaluation of Permanents	119
7.1.	Binet–Minc Method	119
7.2.	Ryser’s Method	122
7.3.	Comparison of Evaluation Methods	124
	Problems	126
Chapter 8.	More about Permanents	129
8.1.	Other Results	129
8.2.	Some Applications of Permanents	135
8.3.	Conjectures and Unsolved Problems— Vintage 1965	148
8.4.	Conjectures and Unsolved Problems— A Current List	154
	Problems	159
	Bibliography	161
	Index to Bibliography	197
	Index of Notation	201
	Index	203
