

Index

- approximation, 105–7, 133–4, 172, 174, 175, 302
- Arrow, K., 247, 257, 260, 272, 273, 278
- assumptions: in causal inference, 39–42, 54–6, 59t, 288; in modern statistical inference, 10, 112–13; in Neyman–Pearson theory, 96, 98, 100–7, 110; in regression point estimation, 107–10; statistical, in classical mechanics, 126, 128, 147; in welfare microeconomics, 10, 274–80
- attachment difficulties: in classical mechanics, 144–6; in income maintenance experiments, 200–5, 214–18, 223–6, 232–4, 237–41, 244–5; in microeconomics, 163–77, 179–81, 244–5; rationalist mode of inquiry and, 309
- behavior, problem of: atomization and individuality and, 291–4, 312; Chomsky's linguistics and, 298–301; consciousness and will and, 294–8, 312
- causal inference: assumptions for, 39–42, 54–6, 59t, 288; difficulties with, in controlled social experiments, 61–4; and hypothesis testing, 47–51; stratified assignment in, 50–2, 71–3; summary of theory of, 59–60t
- causality: counterfactual conditionals and, 25–6, 115; inconsistency and circularity and, 19–22; observations and, 22–3; two concepts of, 17–19
- causal point estimation: with disproportionate stratified assignment, 71–3; extended, 50–8; impediments to, in controlled social experiments, 64–73; impediments to, in income maintenance experiments, 73–82; theory core of, 43–5
- Chomsky, N., 288, 299–301, 310
- classical mechanics: approximation in, 133–4, 302; attachment difficulties in, 144–6; Bohr's hydrogen model and, 140–1; classical hydrogen model in, 139–40; falling bodies in, 132–3; Hooke's Law in, 305–6; ideal-gas law in, 135–6; law of conservation of linear momentum in, 127–9; Newton's laws in, 122–7, 129–32; parallels between microeconomics and, 10, 179t, 237t, 301–8; pendulum motion in, 133–4; placeholder relations in, 124, 182–3; Rutherford scattering in, 136–8; statistical inference in, 148f; summary of formalization of, 141–4
- collocation, 26–7
- complexity, 288–91, 302
- controlled social experiments: as basis for public policy, 313–16, difficulties in, 61–4, 287–91; good and true in conflict in, 67–71; impediments to causal point estimation in, 64–73; income maintenance experiments as, 5; problem of behavior and, 291–301, 312; problem of time and, 288, 289, 301–8, 312–13; two senses of “experiment” and, 3–4; *see also* income maintenance experiments
- Debreu, Gerard, 247, 249–53, 257
- deductive logic: breaches of, in income maintenance experiments, 196–9, 205–14, 218–23, 234–7; in classical mechanics, 141–4; comparison of, in classical mechanics, microeconomics, and income maintenance experiments, 237t; in Gary experiment second study, 226–32; in microeconomics, 178–9; in science generally, 119–21, 141–2
- deterministic law of working (DLW), 27, 42
- die roll, 30–2, 93
- distributions, *see* probability distributions
- DLW, *see* deterministic law of working (DLW)
- double-blind experiments, 61–3, 65–7
- empiricism, 10, 21–3, 116, 287, 308–9; attachment difficulties and, 288; beginning immanent critique of, 34f; Hume and, 89

364 Index

- epistemological problems, 121, 123, 142, 147; *see also* attachment difficulties
- equiprobability, 28–9, 32; first principle of (PEI), 42, 54–6, 58, 64–6; principle of blocked (PBE), 51–2, 71–2; randomization and, 38, 42, 43; second principle of (PEII), 53–4
- Fisher, F. M., 167
- Fisher, R. A., 36–9, 43, 287, 292, 308
- formalization, 8–9
- Friedman, Milton, 151, 198, 200–1, 251, 254, 290
- gambling-device law (GDL), 31–5, 114
- Gödel, Kurt, 9
- Hacking, Ian, 90–1, 95
- Hahn, Frank, 257, 260, 272, 273, 274, 278, 309, 311
- Hamilton's principle, 123
- Händler, E. W., 280–1
- Hausman, Jerry, 311–12
- Hawthorne effect, 62–3, 66–7, 73, 83
- Hayek, F. A., 183
- Heisenberg uncertainty principle, 295
- Huber, P. J., 100
- Hume, David: on causality, 17–19, 23; problem of, in modern statistical inference, 89–90
- income maintenance experiments, 4–6; and first Gary study, 218–26; as immature science experiments, 240–5; impediments to causal point estimation in, 73–82; inferential difficulties in, 83–8, 234–7; and New Jersey study, 196–205; origin of, 1–2; and Seattle-Denver study, 205–18; and second Gary study, 226–34
- induction: problem of, 89–90, 113, 116; weaknesses of, in income maintenance experiments, 196–9, 205–14, 218–23, 234–7
- inference, *see* causal inference; modern statistical inference
- IPES (*inductio per enumerationem simplicem*), 20–2
- Keynes, J. N., 246
- Kuhn, Thomas, 121–2, 141–4, 147, 150–1, 232, 283
- labor-leisure choice theory, 184–96, 238t
- Laplace, P. S., M. de, 28–30
- law: Mill's concept of, 26–7; Popper's sense of, 163; of supply and demand, 272–3, 285, 290, 301–4; Walras's, 272; *see also* classical mechanics; placeholder relations
- McCloskey, D. N., 151–2
- Mackie, J. L., 16, 23, 31–2, 113
- matched pairs, 25, 36–7
- method of difference, 17–26
- microeconomics: approximation in, 172, 174, 175; attachment difficulties in, 163–77, 179–81, 244–5; complexity in, 288–91; consumer theory in, 153–8, 247–53; equilibrium in, 163–7, 255–8, 301–2; identification problem in, 163–9; as immature science, 182, 310; income distribution in, 266, 267–9; logical status of abstract, 258–61; methodological problems of, 310; as normative science, 246–7; parallels between classical mechanics and, 10, 179t, 237t, 301–8; Pareto efficiency in, 261–4, 265–7; placeholder relations in, 155, 160, 182–3, 285, 290, 301, 303–4; producer theory in, 158–61, 253–5; science and scientism in, 182–4; weakening assumptions in welfare, 274–80
- Mill, J. S., 15; on causality, 17–26; on deductive logic in science, 119–20; on distinction between law and collocation, 26–7; on two concepts of probability, 27–30
- modern statistical inference: approximation theorem in, 105–7; classical and consistent nonparametric regression in, 107–10; in classical mechanics experiment, 148f; Hume's problem in, 89–90; limiting relative-frequency concept of probability and, 92–5; Neyman-Pearson problematique in, 95–8; normal distribution's referent in, 92–5; testing problems in, 90–2, 98–105
- Morganstern, Oskar, 262–4
- Moynihan, Daniel Patrick, 314
- Nagel, E., 294, 296–8, 306–7
- negative income tax (NIT), 1–2, 74–80, 83–5, 184, 196; budget constraints and, 198, 210–13, 219–23, 224–6, 227–31; Rawls's principle of justice and, 268–9
- Newton's First Law, 125–7
- Newton's Law of Universal Gravitation, 129–32
- Newton's Second Law (NSL), 122–5, 295, 301, 305
- Neyman, Jerzy, 37–9, 45–7
- Neyman-Pearson theory, 95–110

- observational study, 3
 observation statement, 121
- PBE, *see* equiprobability, principle of blocked (PBE)
- PEI, *see* equiprobability, first principle of (PEI)
- PEII, *see* equiprobability, second principle of (PEII)
- placeholder relations: in microeconomics, 155, 160, 182–3, 285, 290, 301, 303–4; in physics, 124, 141, 182–3
- Polanyi, Karl, 185
- Popper, Sir Karl, 142, 147, 151–2, 163, 232, 259; attachment difficulties and, 144, 146; on economics, 150–1, 303; on history, 183, 306; rationalist view of science and, 120–2, 283, 287
- prediction, 143–4, 151–2, 306, 310–11
- prediction statement, 141–2, 157
- preference satisfaction, principle of, 249
- PRES, *see* reporting-error symmetry, principle of (PRES)
- probability: classical good-reasons concept of, 28–9, 32; die roll and, 30–2; limiting relative-frequency concept of, 29–30, 31, 92–5; two kinds of error and, 96–8
- probability distributions: continuous 100–3; with finite variance, 103–5; normal, 91–5, 98–100, 112; *see also* equiprobability
- profit maximization, principle of, 159, 253
- Putnam, H., 114
- randomization, 3, 47, 49, 295; equiprobability and, 38, 42, 43; Fisher and, 36–8; Neyman and, 38–9, as random sampling, 41, 45–6; stratified, 71, 80–2
- randomization-based causal inference, *see* causal inference
- random selection: difficulties with, in income maintenance experiments, 76–80; from infinite population, 91; in randomization, 41, 45–6; stratified, 54; of subjects, 52–3
- rationalism, 116, 119–20, 287–8, 309; *see also* deductive logic
- Rawls, John, 251, 267–70
- regression: causal univariate, 56–8; classical and consistent nonparametric, 107–10
- reporting-error symmetry, principle of (PRES), 65–6
- Rubin, Donald, 66
- Samuelson, Paul, 304–5, 306–7
- Savage, L., 36
- Schrödinger, E., 18, 19, 92
- Schumpeter, Joseph, 307
- self-reporting, 67, 72, 83, 84t
- self-selection, 69–70, 72, 84t
- Sen, Amartya, 266
- significance level, 47
- Smith, Adam, 246–7, 260–1, 264, 267–70, 273, 274, 281–2, 284
- social experiments, *see* controlled social experiments
- Solow, Robert, 309
- statistical inference, *see* causal inference; modern statistical inference
- Stegmüller, W., 124, 145
- subject consciousness, 64–7; double-blind experiments and, 61–3, 65–7; Hawthorne effect and, 62–3, 66–7, 73, 83; will and, 294–8, 312
- Suppes, Patrick, 18–19
- time, problem of, 288, 289, 301–8, 312–13
- utility maximization, principle of, 154–5
- Weintraub, E. R., 259
- Wise, David, 311–12
- Zelin, M., 68t, 69–70
