	<i>Preface to the first edition</i>	xiii
	<i>Preface to the second edition</i>	xv
1	Introduction	1
	1.1 Uses of interferometry	1
	1.2 Interference and coherence	3
	1.3 Classifications of interferometers	3
	1.3.1 Laser or thermal source	4
	1.3.2 Number of beams	4
	1.3.3 Separation of beams	4
	1.3.4 Number of passes	6
	1.3.5 Order of correlation	6
	1.3.6 Hologram interference	7
	1.4 Basic interferometers	7
	1.5 Description of an interferometer: complementary fringes	9
	1.5.1 Alternative fringes	10
	1.5.2 Fringes of equal chromatic order	11
2	Mathematical foundations	12
	2.1 Fourier transforms	12
	2.1.1 Sine and cosine transforms	13
	2.1.2 More than one variable	14
	2.2 Linear systems	14
	2.3 Generalized functions	16
	2.4 Some useful functions	17
	2.5 Table of Fourier transforms	19
	2.5.1 Uncertainty relation	20
	2.6 Series, sampling, and Gibbs phenomenon	21
	2.6.1 Sampling theorem	22
	2.6.2 Gibbs phenomenon	22
	2.7 Analytic signal	23
	2.8 Random functions	24

Contents

3	Optical foundations	26
	3.1 Reflexion at plane mirrors	26
	3.1.1 Retroreflectors	27
	3.2 Imaging systems	28
	3.3 Units of radiometry	30
	3.4 Wave propagation and diffraction	32
	3.4.1 Plane waves	32
	3.4.2 Spherical waves	33
	3.4.3 General wave	33
	3.4.4 Diffraction at an aperture	33
	3.5 Diffraction in optical systems	34
	3.5.1 Coherent object	36
	3.5.2 Incoherent object	37
	3.5.3 Aberration tolerances	38
	3.5.4 Amplitudes around focus	38
	3.5.5 Diffraction gratings	39
	3.6 Polarization	39
	3.7 Reflexion and transmission at surfaces	40
	3.7.1 Total internal reflexion	42
	3.7.2 Optical thin films	42
4	Wave interference	43
	4.1 Plane waves	43
	4.2 Spherical waves	47
	4.2.1 Derivation of the source separation	48
	4.3 General wave	50
	4.4 Shearing interferometers	51
	4.5 Heterodyne interferometry	53
	4.6 Laser Doppler	54
	4.7 Laser sources	54
	4.7.1 Laser stabilization	56
	4.7.2 Frequency changing	57
	4.7.3 Spatial filters	58
	4.7.4 Optical isolators	58
5	Holograms	60
	5.1 Gabor holograms	60
	5.2 Holograms with an inclined reference beam	61
	5.3 Theory	61
	5.3.1 Interpretation	63
	5.3.2 Thick holograms	64
	5.3.3 Other reconstructions	64

Contents

	5.3.4 Classification	65
	5.4 Reconstruction	65
	5.5 Other holograms	66
	5.5.1 Reflexion holograms	66
	5.5.2 Rainbow holograms	67
	5.5.3 Computed holograms	68
	5.6 Holographic optical components	68
	5.6.1 Holographic gratings	69
	5.6.2 Holograms in interferometry	69
	5.7 Speckle	69
	5.7.1 Properties of speckle patterns	70
6	Coherence theory	72
	6.1 General concepts	72
	6.1.1 Time coherence	72
	6.1.2 Spatial coherence	73
	6.2 Mutual coherence function	74
	6.3 Temporal coherence and quasi-monochromatic radiation	76
	6.4 Spatial coherence	78
	6.4.1 Imaging systems	81
	6.4.2 Effective source	81
	6.5 Combined effects	83
	6.6 Diffuse reflexion	83
	6.6.1 Homologous rays	83
	6.7 Polarization	85
	6.8 Higher-order correlations	85
	6.9 Phase retrieval	86
7	Theory of two-beam interferometers	89
	7.1 Reference planes	89
	7.2 Geometry of the general interferometer	90
	7.3 General theory	93
	7.4 Quasi-monochromatic radiation	94
	7.5 Spatial relations	96
	7.5.1 Fringe localization	97
	7.5.2 Circular source	99
	7.5.3 Integrated values	101
	7.6 Spectral effects	101
	7.6.1 White-light fringes	102
	7.7 Combined effects	103
	7.8 Alternative interferogram	104

Contents

	7.9 Polarization effects	105
	7.10 Division of wavefront	107
8	Practical two-beam interferometers	108
	8.1 The Michelson interferometer	108
	8.1.1 Interferometer without collimation	111
	8.2 Interferometer with retroreflectors	113
	8.3 Interferometer compensation	116
	8.3.1 Field-widened Michelson interferometer	116
	8.3.2 Tilt compensation	121
	8.4 The Mach–Zehnder interferometer	123
	8.5 The cyclic interferometer	125
	8.6 Beam splitters	126
	8.6.1 Beam-splitter coatings	126
	8.6.2 Beam splitters in convergent light	128
	8.6.3 Compensating plate	129
	8.6.4 Symmetrical beam splitters	130
	8.6.5 Prism beam splitters	131
	8.6.6 Polarizing beam splitters	131
	8.7 Polarization interferometers	133
	8.8 Diffraction forms	137
	8.9 Microwave interferometers	137
	8.9.1 Diffraction corrections	138
	8.9.2 Guided waves	139
9	Multiple-beam interferometers	141
	9.1 General characteristics	141
	9.2 Airy function	143
	9.3 The Fabry–Perot interferometer	148
	9.3.1 Reflecting surfaces	149
	9.3.2 Surface quality	150
	9.3.3 Source size	152
	9.3.4 Scanning	153
	9.4 The spherical Fabry–Perot	154
	9.5 Fabry–Perot cavities	155
	9.6 Fabry–Perot interferometers in series	157
	9.6.1 Fringes of superposition	160
	9.7 Gratings and radio interferometers	161
10	Measurement of mean phase	164
	10.1 Measurement of fractional order	165
	10.1.1 Visual measurement	165

Contents

10.1.2	Photo-electric measurements	166
10.1.3	Photo-electric setting	167
10.2	Measurements of integral order	168
10.3	Standard of length	170
10.3.1	Standard wavelengths	171
10.3.2	Wavelength measurement	172
10.3.3	Other standards	173
10.4	Interference comparators for length standards	173
10.4.1	Line standards	174
10.4.2	End standards	174
10.5	Length measurement and control	176
10.5.1	Moiré fringes	177
10.5.2	Small displacements	178
10.6	Measurement of refractive index	178
10.6.1	Plasma diagnostics	181
10.7	Speed of light	182
11	Measurement of phase variations	185
11.1	Testing optical surfaces	186
11.1.1	Flatness interferometers	186
11.1.2	Standards of flatness	188
11.1.3	Spherical surfaces	189
11.1.4	Ground-glass surfaces	189
11.2	Interference microtopography	190
11.3	Testing optical systems with Michelson interferometers	192
11.3.1	Laser sources	196
11.4	Common-path interferometers	197
11.4.1	Double-focus interferometers	199
11.4.2	Radial-shear interferometers	201
11.4.3	Rotational and folding shear	203
11.4.4	Common-path interferometers with lasers	204
11.4.5	Point-diffraction interferometer	205
11.5	Variations of refractive index	206
11.6	Interference microscopes	209
11.7	Alignment by interferometry	213
12	Hologram and speckle interferometry	215
12.1	Classification of methods	215
12.1.1	Treatment of the time variable	215
12.1.2	Objects studied	216

Contents

12.2	Phase variations of classical interferometry	217
12.2.1	Transmitting objects	217
12.2.2	Reflecting objects	218
12.2.3	Diffuse illumination	219
12.3	Hologram interferometry of rough surfaces	219
12.3.1	Theory	219
12.3.2	Fringes at the object	221
12.3.3	Fringes at the hologram	221
12.3.4	Experimental methods	222
12.3.5	Partial analyses	223
12.4	Speckle interferometry	225
12.4.1	Visual speckle interferometer	225
12.4.2	Photographic methods	226
12.4.3	Electronic speckle interferometry	226
12.4.4	Special speckle interferometers	227
12.5	Speckle photography	228
12.5.1	White-light speckle	229
12.6	Object contouring	229
12.6.1	Hologram methods	229
12.6.2	Speckle methods	231
12.6.3	Shadow moiré	231
13	Interference spectroscopy	232
13.1	General theory of spectroscopy	232
13.1.1	Resolution	233
13.1.2	Apodization	234
13.1.3	Sampling	235
13.1.4	Noise	237
13.2	Comparison of methods	238
13.2.1	Etendue advantage	238
13.2.2	Multiplex advantage	240
13.2.3	Effects of errors	241
13.3	Earlier methods of interference spectroscopy	241
13.4	Fabry–Perot interferometers	243
13.5	Birefringent filters	246
13.6	Sisam	249
13.7	Theory of Fourier spectroscopy	250
13.8	Dispersive transforms and phase spectra	256
13.8.1	Phase correction	257
13.9	Methods of computation	259
13.10	Interferometers for Fourier spectroscopy	262

Contents

	13.10.1 Michelson interferometers	262
	13.10.2 Michelson with retroreflectors	264
	13.10.3 Field-widened systems	265
	13.10.4 Polarizing and diffraction forms	266
	13.10.5 Lamellar grating	267
	13.10.6 Sims	268
	13.11 Fringe visibility and correlation interferometry	269
14	Interference imagery	271
	14.1 Survey of applications	271
	14.2 Radio astronomy	272
	14.2.1 Measurement of polarization	275
	14.3 Stellar diameters	276
	14.3.1 Michelson stellar interferometer	277
	14.3.2 Stellar intensity interferometer	279
	14.3.3 Modern stellar interferometers	281
	14.3.4 Speckle interferometry	283
	14.3.5 Heterodyne interferometry	284
	14.4 Optical transfer function	284
	14.4.1 Precision focusing	286
	<i>Bibliography</i>	288
	<i>Index</i>	304
