Preface xix

1 Planning biological surveys	1
<i>J. M. Baker, J. P. Hartley, and B. Dicks</i>	
Why do biological surveys?	1
Scientific research	1
Education	1
Conservation	1
Exploitation of natural resources	1
Management of amenity	2
Environmental impact assessments	2
Biological surveillance or monitoring	2
Contingency plans	2
Damage assessment	2
Thinking around the problem	3
Setting objectives and criteria	3
Options	4
Planning considerations	4
Levels of planning	4
<i>Estuary/coast</i>	4
<i>Habitat/community/population</i>	5
<i>Samples</i>	5
Location of sites and stations	6
Options	6
Examples	7
Sizes and numbers of samples	9
Comparability and reproducibility	10
The time dimension	12
The physical and chemical environment	13
Data handling and presentation	13
Classification schemes	13
Recording data	16
Statistical treatment of results	17
<i>Variance and standard error</i>	17
<i>Diversity and dominance indices</i>	18
<i>Rarefaction</i>	19

vi CONTENTS

Numerically dominant species 19
Multivariate analyses 20
Estimation of community structure using the log-normal method 21
Correlation tests 21
 Presenting the results 22
 Acknowledgements 23
 References 23

2 Remote sensing 27

D. H. Dalby and W. J. Wolff
 Introduction 27
 Aerial photography 28
 Film 28
 Constraints 30
Cost 30
Scale requirements 30
Season 30
Weather and time of day 30
State of the tide 31
 Photogrammetry 31
 Photointerpretation 31
 Digital systems 32
 Principles and general information 32
 Constraints 34
 Digital processing of analogue imagery 35
 Acknowledgements 36
 References 36

3 Salt marshes 38

D. H. Dalby
 Introduction 38
 Planning the survey 39
 Delimiting the working area 40
 Upper limits 40
 Lower limits 41
 Composite treatments 41
 Markers and reference points 42
 Photography 42
 Markers 42
Stability 42
Permanence 43
Conspicuousness 43
 Recommendations 44
 Trampling effects 44
 Preparation of base maps 45
 Mapping small areas 45
Parallax 46
Ambiguous or indeterminate topographical features 46
Poor draughtsmanship 46
Site location 46

CONTENTS

vii

<i>Site disturbance</i>	46
Photographic cover of small areas	46
<i>Size and distance restrictions</i>	46
<i>Horizontal control</i>	47
<i>Optical distortion</i>	47
<i>Lighting</i>	47
<i>Ground truth</i>	47
<i>Mosaics</i>	48
<i>Transport to site</i>	48
Instrument mapping of larger areas	48
Spirit levelling	49
Tide heights as local datum levels	50
Microtopography	51
Vegetation mapping	51
Measures of plant abundance	53
Quadrat studies	53
<i>Quadrat shape</i>	53
<i>Quadrat size and number</i>	53
Qualitative estimates	55
Quantitative measures	56
<i>Density</i>	56
<i>Frequency</i>	57
<i>Cover</i>	57
<i>Cover–abundance scales</i>	58
<i>Point sampling</i>	58
<i>Local frequency</i>	59
<i>Cover repetition</i>	59
Small algae	60
Sampling stands of mixed age and structure	60
Plant performance	60
<i>Indirect methods</i>	61
<i>Direct methods</i>	61
<i>Pattern studies</i>	61
<i>Remote sensing studies</i>	62
Marking individual specimens in the field	62
Direct marking	62
Indirect marking	63
Formal classification of salt-marsh plant communities	63
Subjective floristic approach	63
International phytosociological approach	63
Objective numerical approach	65
Transect studies	65
Accretion measurements	66
Sampling the salt-marsh fauna	67
Tidal cover	68
Adhering salt and silt	68
Humidity near the ground	68
Fauna of soft sediments	68
Fauna of the sediment surface	69
Extraction from loose organic soils	69
Animal behaviour	69
Local migration	69
Problems in identification	70
Indicator species	70
Site evaluation	71

viii CONTENTS

Acknowledgements	72
Appendix 3.1	73
Rapid surveys of arthropods and the ranking of sites in terms of conservation value R. H. L. Disney	73
References	75

4 Flora and macrofauna of intertidal sediments 81

<i>W. J. Wolff</i>	
Introduction	81
Mapping	82
Qualitative surveys	83
Quantitative surveys	87
Sampling strategies	87
Microflora	88
<i>Strategies for microalgae</i>	89
<i>Separation and counting</i>	91
<i>Pigment extraction and estimation</i>	92
Macroflora	94
<i>Seagrasses</i>	94
<i>Macroalgae</i>	95
Macrofauna	95
Position fixing	99
Transport	101
Measurement of environmental factors	102
Acknowledgements	102
References	102

5 Macrofauna of subtidal sediments using remote sampling 106

<i>J. P. Hartley and B. Dicks</i>	
Introduction	106
Aims and objectives	107
Sampling strategies	108
Standardisation of methods	108
Spatial distribution of sampling stations	109
<i>General considerations</i>	109
<i>Examples</i>	110
Frequency of resurvey	114
Sample replication	115
Size of samples	117
Sampling equipment	117
Sampling boats and gear for handling sampling equipment	118
Sample station location and relocation	118
<i>Sightings and triangulation</i>	118
<i>Radar</i>	119
<i>Electronic navigators, land-based</i>	119
<i>Satellite navigation systems</i>	119
Qualitative samplers – dredges and trawls	120
Quantitative samplers – grabs and corers	121
<i>Very shallow water (less than 2 m)</i>	121
<i>Nearshore waters 2–20 m</i>	121

CONTENTS

ix

Waters deeper than 20 m 122
 Remote sensing techniques 125
Aerial photography 125
Linescan systems 125
Satellite imagery 125
 Correlative measurements 126
 References 127

6 Processing sediment macrofauna samples 131

J. P. Hartley, B. Dicks, and W. J. Wolff
 Introduction 131
 Extraction of fauna from sediments 131
 On board research vessels 131
 On tidal flats 132
 In the laboratory 132
 Size of sieve mesh 133
 Preservation of unsorted samples 135
 Sample sorting and analysis 136
 Sorting methods 136
 Identification 137
 Age classes 137
 Biomass 137
 Preservation of reference specimens 137
 References 138

7 Meiofauna 140

L. A. Bouwman
 Introduction 140
 Aims of meiofauna surveys 144
 Planning considerations 146
 Sampling methods 148
 Sample processing 149
 Data processing and interpretation 151
 References 153

8 Intertidal rock 157

J. M. Baker and J. H. Crothers
 Introduction 157
 Planning considerations 157
 Time available on the shore 157
 Delimiting the working area 158
Vertical zonation 158
Horizontal variation 158
Microhabitats 158
 Markers and reference points 160
Markers 160
Photography 160
 Trampling effects 160
 Worker variability 161
 Safety 161

x CONTENTS

Factors affecting shore communities	161
Exposure to wave action	161
<i>Physical measurements of wave action</i>	162
<i>Biological indicators of exposure</i>	163
Secondary physical factors	165
Aspect	165
Slope	165
Rock type	165
Cracks and crevices	166
Stones and boulders	166
Rock pools	166
Water quality	166
Salinity	166
Other water quality parameters	167
Temporal changes	167
Diurnal changes	167
Seasonal changes	167
Long-term changes	168
Biological interactions	169
Abundance scales	169
Extensive descriptive surveys	171
Primary surveys	171
<i>A field card for rocky shore habitats</i> , D. Nichols and N. A. Holme	171
Detailed extensive surveys	173
Transect surveys	175
Levelling	176
<i>Spirit levelling</i>	176
<i>Cross-staff method</i>	176
<i>Bottle and tube method</i>	177
Datum points	177
Transect techniques	177
<i>Abundance scale assessment of interrupted belt transect</i>	177
<i>Quantitative assessment of continuous belt transect</i>	179
<i>Quantitative assessment of permanent representative quadrats in main zones</i>	181
<i>Quantitative assessment of multiple random quadrats at different levels</i>	183
Quadrat surveys	183
Multiple random quadrats for the assessment of abundance	183
Permanent quadrats for surveillance	183
Quadrat samples for community analysis	185
Artificial substrata	185
Identification	186
Conclusions	189
Acknowledgements	189
Appendix 8.1	189
Variation in algal morphology with shore exposure	189
Appendix 8.2	192
Example of data sheet for secondary physical factors	192
References	192

CONTENTS

xi

9 Subtidal rock and shallow sediments using diving 198*K. Hiscock*

Introduction 198

Strategy 198

General planning 198

Survey and sampling units 201

Location of sites and stations 202

Sample size 206

Data compatibility 207

General equipment and methods 209

Basic aids to observation and collecting 209

Photography 209

Tape recorders and communications equipment 209

Towing systems including hydroplanes and underwater tugs 211

Lines and grids 212

Fixing equipment to the sea-bed 212

Location and relocation of sites 213

Mapping profiles underwater 214

Describing habitats 215

Recording of conspicuous species 215

Presence-absence surveys 215

Semi-quantitative surveys 216

Quantitative surveys and mapping using transects 220

Quantitative surveys using reference quadrats 220

Surveys using photographs 221

Quantitative surveys using photographs 221

Measures of frequency 225

Collection of samples 225

Non-quantitative removal of sessile or sedentary species 225

Rock samples 226

Quantitative sampling of flora and fauna from bedrock 227

Quantitative sampling of the fauna of sediments using cores 229

Quantitative sampling of the fauna of sediments using suction samplers 230

Organisms as sampling units – the kelp holdfast 232

Conclusion 234

References 234

10 Bacteria and fungi 238*G. D. Floodgate and E. B. Gareth Jones*

Introduction 238

BACTERIA (G. D. Floodgate) 240

Planning the programme 240

Obtaining the sample 242

Processing a water sample 244

Amount of bacteria present versus activity 245

Estimation of bacterial numbers 245

Total count 246

Viable count 247

Estimation of biomass 248

Microscopic methods 248

Chemical methods 249

Table of Contents

[More information](#)

xii CONTENTS

Activity of bacteria	251
Autoradiography	251
Changes in the concentration of oxygen	252
Fate of added substrate	252
Reduction of tetrazolium salts (ETS)	253
Adenylate energy charge	254
Processing a sediment sample	254
Growing aquatic bacteria	255
Coliform bacteria	256
Bacteria as tracers	257
Identification	258
Acknowledgements	258
FUNGI (E. B. Gareth Jones)	258
Planning the programme	258
Baiting techniques	261
In the field	261
Incubation of baits	262
Quantifying fungi on baits	264
<i>Bait blending and plating out</i>	264
<i>Sub-sampling of bait</i>	265
<i>Aeration and collection of spores</i>	265
<i>Millipore filtration and plating out</i>	266
Isolation of fungi	266
Sporulation of isolates	267
<i>Sand grain method</i>	267
<i>Shearer method</i>	267
Sea-water baiting in the laboratory	267
Sand baiting in the laboratory	268
Examination of drift and intertidal substrata	268
Examination of foam samples	269
Direct plating of water and sediments	269
Sea water	269
Millipore filters	270
Sediments	270
Examination of living material for parasitic and commensal forms	270
Estimation of biomass	270
Identification	271
Acknowledgements	271
References	271
11 Plankton	280
<i>P. B. Tett</i>	
Introduction	280
Hydrography	281
The movements of the sea	281
The vertical structure of the water column	282
Circulation and exchange in estuaries and enclosed seas	284
Temperature–salinity and related diagrams	286
Investigating hydrography in relation to plankton	289

CONTENTS

xiii

Plankton	290
General	290
Phytoplankton	291
Zooplankton	294
Small heterotrophs	297
The plankton of estuaries and coastal waters	299
Seasonal cycles	300
Identification	302
Measuring plankton	303
General	303
Sampling	305
Sample treatment	308
Microscopical analysis of microplankton samples	309
Methods for microplankton biomass	312
Analysis of zooplankton samples	314
Strategy and interpretation	316
Don't change the questions	316
Resources	316
Nutrient chemistry	317
Designing a sampling programme	318
Data analysis and presentation	320
Patchiness	323
Example of a survey	323
Conclusions	325
Acknowledgements	325
Appendix 11.1	326
Calculation of density	326
Appendix 11.2	327
Estimation of a flushing time-scale for an estuary	327
Appendix 11.3	328
Measurement of chlorophyll	328
Introduction	328
Extraction of pigments	329
Measurement of pigments with spectrophotometer	330
Measurement of pigments with fluorometer	330
Theory	331
Fluorometer calibration	333
Discussion	334
References	334
12 Fish	342
<i>G. W. Potts and P. J. Reay</i>	
Introduction	342
Planning considerations	344
Relative and absolute abundance	344
Environmental effects on fish behaviour	344
Selectivity of observation and capture techniques	346
Choice of methods	346
Fish handling	346
Surveys using observation techniques	346
Aerial observations	347
Direct observations underwater	348
Underwater photography	349
Acoustic surveys	350

xiv CONTENTS

Surveys using capture techniques 350
 Catching gear 350
Hand nets and associated techniques 352
Traps 353
Hook and line 353
Set nets 353
Seines 354
Trawls 354
Lift, drop, and push nets 354
Intake screens of cooling water systems 355
 Catch per unit effort surveys 355
Precision 355
Calculation of absolute abundance 355
 Mark-recapture methods 356
 Egg and larval surveys 358
 Indirect methods 359
 Sample analysis 359
 Deck sampling, catch recording, and preservation 359
 Identification 359
 Length, weight, and condition 360
 Sex, maturity and fecundity 360
 Diet determination 361
 Age determination 361
 Data processing 363
 Cohort analysis 363
 Estimating growth and mortality rates 363
 Estimating production 363
 Single species yield models 363
 Multi-species yield models 364
 Use of fishery statistics 364
 References 365

13 **Birds** 374

A. J. Prater and C. S. Lloyd
 Introduction 374
 Numbers and distribution of non-breeding coastal birds 374
 Estuaries 374
Methods 376
Sampling errors and accuracy 376
Special wader counts 378
Related wetland surveys 378
Units of national and international assessment 379
Results 380
 Inshore waters 381
 Gulls 382
 Numbers of breeding seabirds 382
 Cliff-nesting seabirds 383
Methods 384
Counting units 384
Timing 385
Frequency of counts 385
Sampling errors and accuracy 386
Results 387
 Terns 388
