<i>Acknowledgements</i>	vii
Introduction	1
Section I: The scientific, technological, and political environments	7
1 The heritage of X-ray astronomy	9
2 The political environment	27
3 First fruit	34
Section II: The X-ray astronomy community	47
4 Competition and confirmation	49
5 'A major area within astronomy'	54
6 Migrants and money	62
Section III: Resolving the central problem	75
7 Of mechanisms and a model	77
8 Research programs	87
9 More problems, new lines of research	100
10 Uhuru	112
Section IV: Epilogue	125
11 Success and frustration	127
Appendixes	131
1 Statistics on scientists	133
2 Experimental groups in nonsolar X-ray astronomy	136
3 Technical discussion	138
<i>Bibliographic note on unpublished sources</i>	144
<i>Notes</i>	149
<i>Index</i>	183

The generous support and encouragement of many people meshed to create this book. P. Frank Winkler, my former physics professor at Middlebury College, initially spurred my interest in X-ray astronomy. A practitioner in the field, Frank repeatedly urged me to do 'something honest' in life and become a physicist. Instead, I wrote about his specialty. I conducted my first historical research on X-ray astronomy when assisting Homer E. Newell, Jr, a former National Aeronautics and Space Administration (NASA) administrator, in writing a book describing his 30 years as a director of space research. While working at NASA for two summers, I was unselfishly aided by Monte D. Wright, Director of the agency's History Office, and by Frank W. Anderson, Alex F. Roland, Carrie E. Karegeannes, Lee D. Saegesser, Nancy Brun, and Martha Parr.

A fellowship from the Smithsonian Institution's National Air and Space Museum allowed me to pursue further research. My advisers, Tom D. Crouch and Paul A. Hanle, assisted me greatly in understanding the influence of technological innovation on the growth of modern scientific specialties. But perhaps I benefited most by interacting with research fellows having different academic backgrounds. Robert Marc Friedman, for example, emphasized the value of simple and direct writing. I only hope I have mastered enough of his lessons for this book. And Joseph J. Corn contributed useful advice on organizing the manuscript, often during our daily jog past tourists and protestors on the Washington Mall. My positive experience at the museum was enhanced by the kind assistance of Diane Palmer, Dominick Pisano, Catherine Scott, Phyllis Dobson, Robert Van Der Linden, Philip Edwards, Peter Suthard, and Mimi Scharf in the library, and by the aid, patience, and friendship offered by Frederick C. Durant, Howard Wolko, Walter Flint, Louis Purnell, Richard Hallion, Frank Winter, Walter Dillon, Gregory Kennedy, Barbara Pawlowski,

Diane Pearson, Louise Hull, Wendy Ackerman Stephens, Lillian Kozloski, Holly Laffoon, and Nancy Byrkit.

For aid in using their institutional resources, I am indebted to David K. Allison of the Naval Research Laboratory, Spencer R. Weart of the American Institute of Physics, Henry Small of the Institute for Scientific Information, and Richard Hart of the National Academy of Sciences. Much of the book's discussion on X-ray astronomy's social structure benefited from data and insights provided by Thomas F. Gieryn of Indiana University, whose assistance is gratefully acknowledged. I also appreciate the time and effort expended by the scientists, engineers, and administrators who consented to interviews as part of my research (see the bibliographic note on unpublished sources).

For continuing advice and encouragement while writing my dissertation, an early version of this book, I am grateful to my adviser at the University of Wisconsin, Daniel M. Siegel. His characteristic good cheer and sound criticism helped me produce better pieces of scholarship. Further valuable comments came from Aaron J. Ihde and Terry S. Reynolds. My present colleagues at Virginia Polytechnic Institute and State University also deserve special thanks. Lisa Donis, Connie Aikens, Carolyn Alls, and Linda Arnold taught me how to use our new 'toy,' a word processor, which provided tremendous freedom and latitude in revising the manuscript. Many thanks are due to Harold C. Livesay for advising me on the business aspects of publishing, and to Daniel B. Thorp and Carla Knapp, who always know how to celebrate scholarly accomplishments with impromptu parties and a 'fresh' bottle of wine. As friend and as scholar, Albert E. Moyer carefully examined the text and highlighted logical inconsistencies that I hope have since been eliminated. And from a faraway outpost in Orlando, Florida, the manuscript received scrutiny from the journalistic (and lovely!) eyes of Lisanne Renner. Bert and Lisanne's efforts surpassed the bounds of professional courtesy and bolstered my courage to publish this work.

Finally, I owe much to my parents, sister, and grandmother for encouraging my intellectual development. I dedicate this work to these loving people.
