

CONTENTS

PREFACE	vii
TERMINOLOGY AND NOTATION	xi
1 ORE'S METHOD OF LOCALIZATION,	1
1.1 Quotient rings,	2
1.2 Transfer of properties to quotient rings,	12
1.3 Noetherian rings: examples,	16
2 ORDERS IN SEMI-SIMPLE RINGS,	32
2.1 Orders: definition and elementary properties	33
2.2 Torsionfree modules over orders in semi-simple rings,	39
2.3 Goldie's Theorem,	53
3 LOCALIZATION AT SEMI-PRIME IDEALS,	64
3.1 The set $C_R(S)$,	65
3.2 Localizable semi-prime ideals,	71
3.3 Classical localization,	77
3.4 Why Ore's method?	88
4 LOCALIZATION, PRIMARY DECOMPOSITION, AND THE SECOND LAYER,	91
4.1 Injective modules over Noetherian rings,	92
4.2 Primary decomposition of modules,	97
4.3 Localizability and injectives,	106
4.4 The second layer,	110
5 LINKS, BONDS, AND NOETHERIAN BIMODULES,	119
5.1 Noetherian bimodules,	120
5.2 Bonds,	122
5.3 Links and cliques,	135
5.4 Localizability and stability,	144
6 THE SECOND LAYER,	150
6.1 The dichotomy in the second layer,	151
6.2 Sparsity and local finiteness of the link graph,	159
6.3 Evaluation of multiplicity,	175

7	CLASSICAL LOCALIZATION,	186
	7.1 Classical sets,	187
	7.2 Classical cliques,	193
	7.3 Classical localization at semi-prime ideals,	203
	7.4 Noetherian orders in Artinian rings,	211
8	THE SECOND LAYER CONDITION,	219
	8.1 A hierarchy of Noetherian rings,	220
	8.2 Incomparability condition and invariants of \sim ,	226
	8.3 Fully semi-primary rings and Jacobson's conjecture,	239
9	INDECOMPOSABLE INJECTIVES AND THE SECOND LAYER CONDITION,	251
	9.1 Fundamental series,	252
	9.2 Fundamental prime ideals,	256
	9.3 Modules over polynormal rings and centrally separated rings,	263
	9.4 Modules over FBN rings,	268
	APPENDIX: IMPORTANT CLASSES OF NOETHERIAN RINGS,	274
	A.1 Hereditary Noetherian prime rings,	275
	A.2 Finite algebras and Noetherian P.I. rings,	296
	A.3. Enveloping algebras of solvable Lie algebras,	298
	A.4. Group rings of polycyclic-by-finite groups,	305
	REFERENCES,	310
	INDEX,	319
