

CONTENTS

	Preface	vii
1	The linearised equations of motion	1
1.1	Deformation and strain	2
1.2	Continuity of mass	5
1.3	Stress	7
1.4	The momentum equations and their consequences	10
1.5	Constitutive relations	12
1.6	Isotropic elastic solids	15
1.7	The equations of motion and of continuity	18
1.8	The equations of motion in plane and antiplane strain	23
2	Compressional waves and shear waves	25
2.1	Waves of dilatation and rotation	25
2.2	Plane waves	27
2.3	Spherical waves	29
2.4	Radiation from a point force	36
2.5	Cylindrical waves	39
2.6	Two-dimensional problems	45
2.7	Dilatation and shear potentials	46
3	Surface and interface waves	51
3.1	Snell's law	51
3.2	The reflection and refraction of plane harmonic waves	55
3.3	Reflection at a free surface	64
3.4	Rayleigh waves	65
3.5	Stoneley waves	67
3.6	Love waves	71
3.7	Dispersive Rayleigh waves	76
3.8	Group velocity	77
4	Wavefronts and ray paths	82
4.1	Discontinuities across a moving surface	82
4.2	Ray paths	85
4.3	The transport equations	87
4.4	The reflection and refraction of rays	91
4.5	The ray series	93

J. A. Hudson

Table of Contents

[More information](#)

vi	CONTENTS	
5	The general initial-boundary-value problem	99
5.1	Statement of the problem	99
5.2	An extension of Green's theorem	101
5.3	Uniqueness	102
5.4	The reciprocity relation	104
5.5	Green's function	105
5.6	Radiation from boundaries	106
5.7	Representation of the solution of the general problem	109
6	Time-harmonic problems	112
6.1	Transients	112
6.2	The asymptotic solution for a harmonic source	115
6.3	Harmonic waves in a homogeneous medium	117
6.4	Expansion in plane waves	122
6.5	Radiation conditions	126
6.6	Uniqueness	131
6.7	Reciprocity and the Kirchhoff integral	134
6.8	Green's function	136
6.9	Two-dimensional problems	137
6.10	Harmonic waves in heterogeneous material	142
7	A line source in a half-space (the Lamb problem)	146
7.1	The method of images	147
7.2	Solution by the use of integral transforms	149
7.3	Inversion of the double transform	154
7.4	Identification of singularities and wavefronts	166
7.5	Rayleigh waves and leaky modes	169
8	The Lamb problem with a harmonic source	173
8.1	The behaviour of the disturbance in a half-space after long time	174
8.2	The solution of the time-harmonic problem	176
8.3	The asymptotic form of the solution at high frequencies	177
8.4	The asymptotic form of the solution at large distances	185
9	Linear visco-elasticity	188
9.1	Constitutive relations for linearly visco-elastic materials	189
9.2	The relation between relaxation and creep	194
9.3	Some simple visco-elastic laws	197
9.4	Wave speeds and uniqueness	204
9.5	Damping of harmonic oscillations	205
9.6	Damped harmonic waves	211
9.7	Slight damping	219
	References	223
	Index	225
