

Contents

	<i>Preface</i>	<i>page xi</i>
1	The size of living things	1
	The smallest and the largest	2
	Giant dinosaurs: Were they semiaquatic?	3
	The largest land mammals	4
2	Problems of size and scale	7
	Definition of scaling	7
	Constraints can be overcome by a novel design	9
	Similarity	11
	Allometric scaling	14
	Dimensions	17
	Dimensionless quantities	19
3	The use of allometry	21
	Biological significance and statistical significance	21
	The allometric signal	22
	Secondary signals	23
	Outliers and extrapolations	23
	The use of allometric equations	25
	Were dinosaurs stupid?	26
	Scaling fish	29
4	How to scale eggs	33
	Bird eggs	33
	Requirements to be met	34
		v

vi	<i>Contents</i>	
	Egg size and bird size	35
	Incubation time	36
	Pores in the eggshell	37
	Water loss from eggs	39
5	The strength of bones and skeletons	42
	What skeletons do	42
	Scaling mammalian skeletons	43
	What about real animals?	45
	How light are bird bones?	47
	Aquatic animals: lighter skeletons?	48
	The strength of bones	49
	External skeletons: a complicated matter	52
	Breaking eggshells	54
6	Metabolic rate and body size	56
	Metabolic rates of mammals	57
	Is the “true” slope really 0.75?	60
	Specific metabolic rate	62
	Marsupial mammals	64
	Birds	65
	Reptiles	68
	Amphibians and fish	71
	Invertebrates	73
7	Warm-blooded vertebrates: What do metabolic regression equations mean?	75
	Body temperature	75
	The surface law	77
	Isometric or not?	82
	McMahon’s model	83
	Gravitational effects as an explanation?	86
	Metabolic similarities	87
8	Organ size and tissue metabolism	90
	Tissue metabolism and cell size	90
	Summated tissue respiration	94
	Metabolic equipment of the tissues	97
9	How the lungs supply enough oxygen	99
	The lungs of mammals	99
	Bird lungs	104

<i>Contents</i>	vii
A remarkably simple concept: symmorphosis	106
Cold-blooded vertebrates	108
Fish gills	109
Gill area	111
10 Blood and gas transport	115
Hemoglobin concentration	115
Blood volume	117
Red cell size	118
Oxygen uptake and delivery	119
Oxygen affinity of hemoglobin	119
Oxygen unloading in the tissues	121
Fuel supply	124
Conclusions	125
11 Heart and circulation	126
The mammalian heart	126
Shrews, the smallest mammals	128
The bird heart	130
Marsupials	132
Cold-blooded vertebrates	133
Invertebrates	134
The work of the heart	135
Vascular turbulence	137
Circulation time	139
Non-scaleable variables	141
12 The meaning of time	143
Time and frequency: How fast beats the heart?	143
Metabolic rate and metabolic time	145
Life: How long, how fast?	146
Long life and big brains	148
Real time	149
A cold look at time	150
13 Animal activity and metabolic scope	151
Maximal performance	151
An important principle	152
Metabolic scope	152
Taylor and Weibel	153
Birds and bats	156

viii	<i>Contents</i>	
	To supply oxygen for flight: lungs and heart	158
	Factorial scope: cold-blooded vertebrates	160
	Muscle mass and muscle power	162
14	Moving on land: running and jumping	165
	Running on land	165
	The energy cost of running	167
	How fast animals run	172
	Running uphill and carrying loads	175
	Scaling of jumps	176
	Elastic energy storage	180
15	Swimming and flying	182
	Fish	182
	Swimming salmon	184
	Flying animals	187
	Birds	188
	The structure of birds	188
	Flight speed	189
	Drag and cost of flight	190
	Maximum size for bird flight	191
	Is there a lower size limit?	193
	Cost of transport	194
16	Body temperature and temperature regulation	197
	Scaling of heat loss	197
	The role of fur	201
	Conductance and tolerance to cold	202
	Warm-blooded dinosaurs?	204
	The smallest birds and mammals	204
17	Some important concepts	209
	Non-scaleable and scale-independent variables	209
	Optimal design	211
	Constraints and discontinuities	212
	Ecological implications	213
	Appendixes	217
A	Symbols used	219
B	The allometric equation	220

Cambridge University Press

0521319870 - Scaling: Why Is Animal Size so Important - Knut Schmidt-Nielsen

Table of Contents

[More information](#)

	<i>Contents</i>	ix
C	Recalculation of equations according to units used for body mass	222
D	Algebraic rules for operating with expressions that contain powers and roots	223
E	Dimensional formulas for some commonly used physical quantities in the M L T system	224
	<i>References</i>	225
	<i>Index</i>	237
