Preface ix

1 Introduction 1

- 1.1 Excitations in crystals 2
- 1.2 Surface reconstruction 12
- 1.3 Theoretical methods 15
- 1.4 Experimental methods 21
- 1.5 Problems 30

2 Surface waves on elastic media and liquids 33

- 2.1 One-dimensional lattice dynamics 34
- 2.2 Bulk elasticity theory 40
- 2.3 Surface elastic waves 45
- 2.4 Acoustic Green functions 50
- 2.5 Normal-incidence Brillouin scattering 56
- 2.6 Oblique-incidence Brillouin scattering 64
- 2.7 Inelastic particle scattering 68
- 2.8 Surface waves on liquids 72
- 2.9 Problems 83

3 Surface magnons 85

- 3.1 The magnetic Hamiltonian 85
- 3.2 Magnons in bulk Heisenberg ferromagnets 88
- 3.3 Semi-infinite Heisenberg ferromagnets 90
- 3.4 Heisenberg ferromagnetic films 104
- 3.5 Heisenberg antiferromagnets 109
- 3.6 Experimental studies 117
- 3.7 Magnons in Ising ferromagnets 119
- 3.8 Problems 125

Contents

- 4 Surface magnetostatic modes 127**
 - 4.1 Dipole–dipole interactions in bulk ferromagnets 128
 - 4.2 Magnetostatic modes for a ferromagnetic slab 130
 - 4.3 Magnetostatic modes for a double-layer ferromagnet 136
 - 4.4 Dipole-exchange modes for ferromagnets 137
 - 4.5 Magnetostatic modes for antiferromagnets 142
 - 4.6 Brillouin scattering 146
 - 4.7 Other experimental studies 153
 - 4.8 Problems 154

- 5 Electronic surface states and dielectric functions 157**
 - 5.1 Single-electron surface states 158
 - 5.2 General properties of dielectric functions 163
 - 5.3 Collective properties of the electron gas 165
 - 5.4 Dielectric function of ionic crystals 177
 - 5.5 Problems 180

- 6 Surface polaritons 183**
 - 6.1 Bulk polaritons 184
 - 6.2 Surface polaritons: single-interface modes 194
 - 6.3 Surface polaritons: two-interface modes 208
 - 6.4 Surface polaritons: nonlinear effects 214
 - 6.5 Attenuated total reflection 218
 - 6.6 Other experimental methods 228
 - 6.7 Surface magnon-polaritons 235
 - 6.8 Problems 244

- 7 Layered structures and superlattices 247**
 - 7.1 Continuum acoustics: folded acoustic modes 249
 - 7.2 Lattice dynamics: folded optic modes 256
 - 7.3 Optical properties 263
 - 7.4 Single-electron states 271
 - 7.5 Plasmons 276
 - 7.6 Magnetic properties 287
 - 7.7 Problems 299

- 8 Concluding remarks 302**
 - 8.1 Mixed excitations 302
 - 8.2 Nonlinear effects and interactions between excitations 303
 - 8.3 Excitations in wedges and at edges 305

Cambridge University Press

0521321549 - Introduction to Surface and Superlattice Excitations

Michael G. Cottam and David R. Tilley

Table of Contents

[More information](#)

Contents

8.4 Excitations in spheroidal and cylindrical samples 307

8.5 Surface roughness 309

Appendix Green functions and linear response theory 311

A.1 Basic properties of Green functions 311

A.2 Linear-response theory 312

A.3 The fluctuation-dissipation theorem 314

A.4 Problems 316
