CHEMISTRY AND PHARMACOLOGY OF NATURAL PRODUCTS

Series Editors: Professor J.D. Phillipson, *Department of Pharmacognosy, The School of Pharmacy, University of London*; Dr D.C. Ayres, *Department of Chemistry, Queen Mary College, University of London*; H. Baxter, *formerly at the Laboratory of the Government Chemist, London*.

Also in this series

Edwin Haslam *Plant polyphenols: vegetable tannins revisited*

D.C. Ayres & J.D. Loike *Lignans: chemical, biological and clinical properties*

Contents

<i>Acknowledgements</i>	vii
<i>Introduction</i>	1
1. Lectins and their specificity	3
D-mannose/D-glucose-specific lectins	4
N-acetyl-D-glucosamine-binding lectins	9
N-acetyl-D-galactosamine/D-galactose-binding lectins	14
<i>Ricinus communis</i> lectins	15
Soyabean (<i>Glycine max</i>) agglutinin	20
<i>Phaseolus vulgaris</i> lectins (PHA)	24
L-fucose-binding lectins	30
2. Structure of lectins	32
Primary sequences	32
Metal binding sites	35
Hydrophobic sites	36
Glycosylation sites	37
Carbohydrate-binding sites	37
Three-dimensional structure	37
Conclusions	38
3. Localization and biosynthesis in plants	39
Localization in the plant and cellular location	39
Seeds	39
Vegetative parts	43
Biosynthesis of plant lectins	50
4. Biological functions in plants	57
Interactions with endogenous receptors	57
Interactions with exogenous receptors	59

vi *Contents*

Defence against microorganisms and potential predators	60
Legume– <i>Rhizobium</i> symbiosis	64
Miscellaneous functions	70
5. Effects on blood cells	74
Agglutination	74
Mitogenic stimulation of lymphocytes	78
Immunosuppression	95
Lectin-dependent blood cell cytotoxicity and phagocytosis	101
Lectin-induced mast cell reactions	102
6. General effects on animal cells	105
Insulin-mimicking effects on adipocytes and other cells	105
Effects of lectins on cells of the digestive tract	107
Lectins in foods	108
The nutritional toxicity of PHA	111
Effects of PHA on the digestive tract <i>in vivo</i>	113
Effects of other lectins on cells of the small intestine	159
Transport of lectins through the membranes of the adult gut – a potential system for the oral delivery of drugs	179
Interactions with nerve cells and transneuronal transport of lectins	183
Miscellaneous interactions of lectins with cells and their underlying structural elements	190
Cytotoxins – magic bullets – immunotoxins	199
<i>References</i>	206
<i>Glossary</i>	251
<i>Index</i>	253

Acknowledgements

The author is a Senior Research Fellow of the Rowett Research Institute. Both his research carried out over the years and writing of this book have been made possible by Institute's generous support.

The author is also indebted to The Leverhulme Trust for the award of an Emeritus Fellowship and to the Royal Society of Edinburgh for the Auber Bequest Award. Their support in the final phases of this work is gratefully acknowledged. The author sincerely thanks the many colleagues and, especially, Drs S. Bardocz and K. Baintner, for the valuable discussions, their time, substantial help and generous advice with the manuscript during the compilation and checking of data and the writing of the book. The micrographs in Figures 6.2, 6.3, 6.4, 6.13 and 6.14 were taken by Dr T.P. King and his permission to include them in this book is much appreciated. Our work is a part of a FLAIR Concerted Action Programme (No. 9) supported by the Commission of European Communities and coordinated by the author.
