

## Contents

<i>Preface</i>	xiii
Notation	xvi
<b>1. Introduction</b>	1
1.1 The language of thermodynamics	2
1.2 Thermodynamic properties of systems	4
1.3 Notation	5
<b>2. Temperature, heat, work, energy, and enthalpy</b>	6
2.1 Temperature	6
2.2 Heat and heat capacity	7
2.3 Work	9
2.4 Quasistatic processes	14
2.5 Other 'work' interactions	15
2.6 The first law of thermodynamics: the energy function	16
2.7 The enthalpy function	19
2.8 The ideal gas and the first law of thermodynamics	20
2.9 Representation of changes of state	22
<b>3. The second law of thermodynamics: the entropy function</b>	24
3.1 Heat and work reservoirs	24
3.2 Heat engines	25
3.3 Reversible and irreversible processes	25
3.4 The reversible transfer of heat	30
3.5 The Carnot cycle	30
3.6 The thermodynamic temperature scale	32
3.7 The identity of the Kelvin and ideal gas temperature scales	34
3.8 The efficiency of reversible heat engines: two statements of the second law of thermodynamics	36
3.9 Carnot's theorem: the maximum efficiency of reversible heat engines	38
3.10 The entropy function	40

viii *Contents*

3.11	The change in the value of the entropy function of an isolated system along a reversible path	41
3.12	The change in the value of the entropy function of an isolated system along an irreversible path	43
3.13	A third statement of the second law of thermodynamics	45
3.14	The dependence of the entropy on temperature	45
3.15	The change of entropy for a change of state of aggregation	46
<b>4.</b>	<b>Gibbs and Helmholtz energy functions and open systems</b>	<b>47</b>
4.1	The Helmholtz energy	47
4.2	The Gibbs energy	49
4.3	Open systems	50
4.4	Résumé	52
4.5	Dependence of the thermodynamic functions on the independent variables	55
4.6	The Maxwell relations and other relations	57
4.7	Development of other relations	58
4.8	The energy as a function of the temperature and volume, and the enthalpy as a function of the temperature and pressure	61
4.9	The integration of Equation (4.74)	62
<b>5.</b>	<b>Conditions of equilibrium and stability: the phase rule</b>	<b>64</b>
5.1	Gibbs' statement concerning equilibrium	64
5.2	Proof of Gibbs' criterion for equilibrium	67
5.3	Conditions of equilibrium for heterogenous systems	67
5.4	Conditions of equilibrium for chemical reactions	70
5.5	Conditions of equilibrium for heterogenous systems with various restrictions	73
5.6	Other conditions of equilibrium	74
5.7	The chemical potential	75
5.8	The Gibbs–Duhem equation	76
5.9	Application of Euler's theorem to other functions	77
5.10	The Gibbs phase rule	78
5.11	The variables required to define the state of an isolated system	79
5.12	Applications of the Gibbs–Duhem equation and the Gibbs phase rule	82
5.13	Indifferent states	85
5.14	The Gibbs–Konovalow theorems	88
5.15	Conditions of stability	89
5.16	Critical phenomena	98
5.17	Graphical representation	105
<b>6.</b>	<b>Partial molar quantities</b>	<b>119</b>
6.1	Definition of partial molar quantities	119
6.2	Relations concerning partial molar quantities	120
6.3	Algebraic determination of partial molar quantities	122
6.4	Apparent molar quantities	129

<i>Contents</i>	ix
6.5 Graphical determination of the partial molar volumes of binary systems	131
6.6 Integration of Equation (6.12) for a binary system	132
<b>7. Ideal gases and real gases</b>	<b>135</b>
7.1 The ideal gas	135
7.2 Pure real gases	137
7.3 Mixtures of real gases and combinations of coefficients	140
7.4 The Joule effect	143
7.5 The Joule–Thomson effect	143
7.6 Thermodynamic functions for ideal gases	146
7.7 The changes of the thermodynamic functions on mixing of ideal gases	148
7.8 The thermodynamic functions of real gases	149
7.9 The changes of the thermodynamic functions on mixing of real gases	152
7.10 The equilibrium pressure	153
7.11 The fugacity and fugacity coefficient	153
7.12 The integration constant, $g_k(T)$	156
<b>8. Liquids and solids: reference and standard states</b>	<b>159</b>
8.1 Single-phase, one-component systems	160
8.2 Changes of the state of aggregation in one-component systems	164
8.3 Two-phase, one-component systems	165
8.4 Three-phase, one-component systems	170
8.5 Solutions	171
8.6 The ideal solution	173
8.7 Real solutions: reference and standard states	175
8.8 Definitions based on mole fractions	178
8.9 Definitions based on molalities	182
8.10 Definitions based on molarities	188
8.11 The osmotic coefficient	190
8.12 The dependence of the activity and the activity coefficient on temperature	191
8.13 The dependence of the activity and the activity coefficient on pressure	192
8.14 Conversion from one reference state to another	193
8.15 Reference and standard states for species	197
8.16 Solutions of strong electrolytes	201
8.17 Solutions of weak electrolytes	204
8.18 Mixtures of molten salts	205
<b>9. Thermochemistry</b>	<b>209</b>
9.1 Basic concepts of calorimetry	210
9.2 Molar heat capacities of saturated phases	212
9.3 Heat capacities of multiphase, closed systems	214
9.4 Changes of enthalpy for changes of state involving solutions	217
9.5 Changes of enthalpy for changes of state involving chemical reactions	223

x	<i>Contents</i>	
9.6	Standard changes of enthalpy (standard enthalpies) of formation	225
9.7	The dependence of the change of enthalpy for a chemical reaction on the temperature and pressure	227
<b>10.</b>	<b>Phase equilibrium</b>	232
	<i>One-component systems</i>	233
10.1	Phase transitions	233
10.2	Gas and condensed phase equilibrium: the Clausius–Clapeyron equation	234
10.3	The dependence of the boiling point on pressure	235
10.4	Dependence of the vapor pressure of a condensed phase on total pressure	236
10.5	Second-order transitions	238
	<i>Two-component systems</i>	239
10.6	Liquid–vapor equilibria at constant temperature	240
10.7	Raoult’s law	243
10.8	Henry’s law	244
10.9	Limited uses of the Gibbs–Duhem equation	246
10.10	Liquid–vapor equilibria at constant pressure	250
10.11	The boiling point elevation	255
10.12	Liquid–pure solid equilibria at constant pressure	255
10.13	Freezing point lowering and solubility	257
10.14	Liquid–solid solution equilibria at constant pressure	257
10.15	Liquid–liquid equilibria at constant pressure	258
10.16	Osmotic pressure	259
10.17	Other concentration variables	261
10.18	Solutions of strong electrolytes	261
10.19	Solutions of fused salts	263
10.20	Applications of the Gibbs–Duhem equations	263
10.21	Raoult’s law	268
10.22	Henry’s law	268
10.23	Boiling point elevation	269
10.24	Solubility and freezing point lowering	270
10.25	Liquid solution–solid solution equilibria	274
10.26	Indifferent systems	276
10.27	Three-phase systems	277
10.28	Calculation of phase equilibria from the chemical potentials	278
	<i>Three-component systems</i>	280
10.29	Pseudobinary systems	280
10.30	Determination of excess chemical potentials	281
10.31	The use of the Gibbs–Duhem equations	287
10.32	Liquid–liquid equilibria	289
<b>11.</b>	<b>Chemical equilibrium</b>	292
11.1	Basic considerations	292

<i>Contents</i>	xi
11.2 The experimental determination of equilibrium constants	296
11.3 The effect of temperature on the equilibrium constant	297
11.4 The effect of pressure on the equilibrium constant	299
11.5 The standard Gibbs energy of formation	300
11.6 The standard Gibbs energy of formation of ions in solution	301
11.7 Conventions concerning solvated species	302
11.8 Ionization constants of weak acids	308
11.9 Aqueous solutions of sulfuric acid	309
11.10 Nonstoichiometric solid solutions or compounds	311
11.11 Association and complex formation in condensed phases	312
11.12 Phase equilibria in terms of species	322
11.13 Use of the Gibbs–Duhem equations	325
11.14 Equilibria between pure solids and liquids	327
11.15 The change of the Gibbs energy for a chemical change of state under arbitrary conditions	329
<b>12. Equilibria in electrochemical systems</b>	<b>330</b>
12.1 Electrically charged phases and phases of identical composition	330
12.2 Conditions of equilibrium	331
12.3 Differences in electrical potentials	331
12.4 An electrochemical cell	334
12.5 The convention of signs for a galvanic cell	337
12.6 Conditions of reversibility	338
12.7 The standard electromotive force of a cell	339
12.8 The temperature dependence of the emf of a cell	340
12.9 The pressure dependence of the emf of a cell	346
12.10 Half-cell potentials	347
12.11 Some galvanic cells without liquid junction	349
12.12 Galvanic cells with liquid junction	351
12.13 Membrane equilibrium	355
12.14 Some final comments	358
<b>13. Surface effects</b>	<b>359</b>
13.1 Surface phenomena related to the system	359
13.2 Surface phenomena related to a defined surface	363
13.3 The surface tension and surface concentrations	368
13.4 Curved surfaces	373
<b>14. Equilibrium conditions in the presence of an external field</b>	<b>376</b>
<i>The gravitational and centrifugal field</i>	376
14.1 The gravitational and centrifugal potential	376
14.2 The fundamental equations	377
14.3 Conditions of equilibrium	380
14.4 Dependence of pressure on the potential	381
14.5 Dependence of composition on the potential	382
14.6 The Gibbs–Duhem equation and the phase rule	384

xii      *Contents*

14.7	The definition of the state of the system	384
	<i>Systems in an electrostatic field</i>	387
14.8	The condenser in empty space	387
14.9	The condenser in a dielectric medium	387
14.10	Work associated with electrostatic fields	388
14.11	Thermodynamics of the total system	389
14.12	Thermodynamics of the dielectric medium	391
	<i>Systems in a magnetic field</i>	394
14.13	The solenoid in empty space	394
14.14	The solenoid filled with isotropic matter	395
14.15	Work associated with magnetic effects	396
14.16	Thermodynamics of the total system	396
14.17	Thermodynamics of a dia- or paramagnetic substance	397
<b>15.</b>	<b>The third law of thermodynamics</b>	399
15.1	The preliminary concepts of the third law	400
15.2	Experimental determination of absolute entropies	401
15.3	Confirmation of the third law	403
15.4	Understanding the third law	403
15.5	Practical basis for absolute values of the entropy	409
15.6	Thermodynamic functions based on the third law	410
15.7	Uses of the thermodynamic functions	412
	<b>Appendices</b>	
<b>A.</b>	<b>SI units and fundamental constants</b>	415
	A-1. Base SI units	415
	A-2. SI-derived units	415
	A-3. 1986 recommended values of the fundamental physical constants	416
<b>B.</b>	<b>Molar heat capacities at constant pressure for selected substances</b>	417
<b>C.</b>	<b>Thermodynamic data</b>	418
	C-1. Enthalpies and Gibbs energies of formation at 298.15 K	418
	C-2. Absolute entropies at 298.15 K	419
	C-3. Enthalpy increment function	420
	C-4. Gibbs energy increment function	421
<b>D.</b>	<b>Standard reduction potentials in aqueous solutions</b>	422
	Cited references and selected bibliography	423
	Subject index	431
