<i>Preface</i>	xi
<i>Introduction</i>	xiii
<i>List of symbols</i>	xvi
I Axioms for homotopy theory and examples of cofibration categories	1
0 Cofibrations and fibrations in topology	2
1 Cofibration categories	5
1a Appendix: fibration categories	10
1b Appendix: proof of (1.4)	12
2 The axioms of Quillen	14
3 Categories with a natural cylinder	18
3a Appendix: categories with a natural path object	27
4 The category of topological spaces	29
4a Appendix: the relative homotopy lifting property	31
4b Appendix: the cube theorem	33
5 Examples of cofibration categories	34
6 The category of chain complexes	39
7 The category of chain algebras	45
8 The category of commutative cochain algebras	58
9 The category of chain Lie algebras	74
II Homotopy theory in a cofibration category	83
1 Some properties of a cofibration category	83
2 Sets of homotopy classes	92
3 The homotopy category of fibrant and cofibrant objects	99
4 Functors between cofibration categories	102
5 The groupoid of homotopies	104
5a Appendix: homotopies and functors	110
6 Homotopy groups	115

6a	Appendix: homotopy groups and functors	118
7	Relative homotopy groups and the exact homotopy sequence of a pair	119
8	Principal cofibrations and the cofiber sequence	125
9	Induced maps on cofibers	131
10	Homotopy groups of function spaces	135
10a	Appendix: homotopy groups of function spaces and functors	141
11	The partial and functional suspensions	142
12	The difference operator	145
13	Double mapping cones	147
14	Homotopy theory in a fibration category	152
15	Whitehead products	154
15a	Appendix: Whitehead products, co-Whitehead products and cup products in topology	160
16	Examples on the classification of maps in topology	164
17	Homotopy groups in the category of chain algebras	169
III	The homotopy spectral sequences in a cofibration category	179
1	Homotopy groups of homotopy limits	180
2	The homotopy spectral sequence	189
3	Based complexes and cohomology	194
4	Complexes and twisted cohomology	199
5	Cohomology with local coefficients of CW-complexes	206
5a	Appendix: admissible classes of complexes	211
6	Eilenberg–Mac Lane spaces and cohomology with local coefficients	213
7	Postnikov towers	215
8	Nilpotency of function spaces in topology	216
9	Homotopy groups of function spaces in topology	218
10	The relative homotopy spectral sequence	219
11	The relative homotopy spectral sequence for CW-complexes	227
IV	Extensions, coverings, and cohomology groups of a category	229
1	Detecting functors	229
2	Group actions on categories	231
3	Linear extensions of categories	236
4	Linear coverings of categories and exact sequences for functors	239
5	The cohomology of a small category	245
6	Classification of linear extensions	251
7	Classification of linear coverings	255
		258
V	Maps between mapping cones	
1	Group actions on the category PAIR	258
2	Principal and twisted maps between mapping cones	260
3	A linear group action	263
3a	Appendix: the homotopy category of Moore spaces in degree n	267
4	A quadratic group action	269
5	The equivalence problem	271

Contents	ix
6 Maps between fiber spaces in a fibration category	275
7 The homotopy type of a mapping cone in topology	277
7a Appendix: proof of the general suspension theorem under D	283
8 Example: homotopy theory of the 2-stem and of the 3-stem	286
9 Example: The group of homotopy equivalence of the connected sum ($S^1 \times S^3$)#($S^2 \times S^2$)	290
10 The homotopy type of a fiber space in topology	295
10a Appendix: proof of the general loop theorem over D	302
VI Homotopy theory of CW-complexes	306
1 Crossed chain complexes	306
2 The functional suspension and the Peiffer-group for 2-dimensional CW-complexes	315
3 The homotopy category of 2-dimensional CW-complexes under D	319
4 The tower of categories for the homotopy category of crossed chain complexes	322
5 Homotopy systems of order n , $n \geq 3$	336
6 The tower of categories for the homotopy category of CW-complexes under D	346
7 Small models and obstructions to finiteness for CW-complexes under D	356
8 n -dimensional CW-complexes and $(n - 1)$ -types	364
VII Homotopy theory of complexes in a cofibration category	371
1 Twisted maps between complexes	371
2 Twisted maps and 1-homotopies	385
3 Examples of complexes in topology	397
4 Complexes in the category of chain algebras	401
VIII Homotopy theory of Postnikov towers and the Sullivan–de Rham equivalence of rational homotopy categories	404
1 The tower of categories for Postnikov decompositions	404
2 The category of $K(A, n)$ -fibrations over D	414
3 The de Rham theorem for cohomology groups with local coefficients	416
4 The tower of categories for commutative cochain algebras under D	424
5 The category of $\Lambda(V, n)$ -cofibrations under D	426
6 Integral homotopy theory of spaces over D and minimal models	427
IX Homotopy theory of reduced complexes	436
1 Reduced complexes	436
2 The tower of categories for reduced complexes	438
3 Functors on reduced complexes and the Quillen equivalence of rational homotopy categories	443
4 Whitehead's classification of simply connected 4-dimensional CW-complexes and the corresponding result for reduced complexes	447
<i>Bibliography</i>	455
<i>Index</i>	461
