978-0-521-33645-1 - Lectures on Stochastic Analysis: Diffusion Theory

Daniel W. Stroock

Table of Contents

[More information](#)*Contents*

<i>Introduction</i>	<i>vii</i>
1 Stochastic processes and measures on function space	
1.1 Conditional probabilities and transition probability functions	1
1.2 The weak topology	4
1.3 Constructing measures on $C([0, \infty); \mathbb{R}^N)$	12
1.4 Wiener measure, some elementary properties	15
2 Diffusions and martingales	
2.1 A brief introduction to classical diffusion theory	19
2.2 The elements of martingale theory	27
2.3 Stochastic integrals, Ito's formula and semi-martingales	49
3 The martingale problem formulation of diffusion theory	
3.1 Formulation and some basic facts	73
3.2 The martingale problem and stochastic integral equations	87
3.3 Localization	101
3.4 The Cameron-Martin-Girsanov transformation	106
3.5 The martingale problem when \mathbf{a} is continuous and positive	112
<i>Appendix</i>	120
<i>Index</i>	127
