

## Contents

Preface	<i>page xi</i>
Chapter 1. Introduction	1
1.1 Truncated regression models	1
1.2 Censored regression models	3
1.3 Dummy endogenous variables	6
Chapter 2. Discrete regression models	13
2.1 What are discrete regression models?	13
2.2 The linear probability model	15
2.3 The linear discriminant function	16
2.4 Analogy with multiple regression and the linear probability model	18
2.5 The probit and logit models	22
2.6 Comparison of the logit model and normal discriminant analysis	27
2.7 The twin linear probability model	28
2.8 The case of multiple observations: minimum chi-square methods	28
2.9 Illustrative examples with grouped data	32
2.10 Polychotomous variables: unordered variables	34
2.11 Measures of goodness of fit	37
2.12 Multinomial logit and McFadden's conditional logit	41
2.13 Polychotomous variables: ordered-response models	46

vi	<b>Contents</b>	
	2.14 Polychotomous variables: sequential-response models	49
	2.15 Noncategorical variables: Poisson regression	51
	2.16 Estimation of logit models with randomized data	54
	2.17 Estimation of logit and probit models from panel data	56
	<b>Chapter 3. Probabilistic-choice models</b>	<b>59</b>
	3.1 McFadden's conditional logit model	59
	3.2 The Luce model	61
	3.3 The multinomial probit model	62
	3.4 The elimination-by-aspects model	64
	3.5 The hierarchical elimination-by-aspects model	66
	3.6 The nested multinomial logit model	67
	3.7 The generalized extreme-value model	70
	3.8 The relationship between the NMNL model and the GEV model	72
	3.9 Estimation methods	73
	3.10 Goodness-of-fit measures	76
	3.11 Some tests for specification error	77
	3.12 Concluding remarks	78
	<b>Chapter 4. Discriminant analysis</b>	<b>79</b>
	4.1 Introduction	79
	4.2 The case of two populations	79
	4.3 Prior probabilities and costs of misclassification	80
	4.4 Nonnormal data and logistic discrimination	81
	4.5 The case of several groups	86
	4.6 Bayesian methods	88
	4.7 Separate-sample logistic discrimination	90
	<b>Chapter 5. Multivariate qualitative variables</b>	<b>93</b>
	5.1 Introduction	93
	5.2 Some minimum chi-square methods for grouped data	96
	5.3 Log-linear models	103
	5.4 Conditional logistic models	105
	5.5 Recursive logistic models	108
	5.6 Some comments on LLM, CLM, RLM, the conditional log-linear models, and simultaneous equations	113

Contents	vii
5.7 Models with mixed structures: some consistent and inconsistent models	117
5.8 Heckman's model with structural shift and dummy endogenous variables	125
5.9 Unobserved latent variables and dummy indicators	138
5.10 Summary and conclusions	147
<b>Chapter 6. Censored and truncated regression models</b>	<b>149</b>
6.1 Introduction	149
6.2 Censored and truncated variables	149
6.3 The tobit (censored regression) model	151
6.4 A reparametrization of the tobit model	156
6.5 Two-stage estimation of the tobit model	158
6.6 Prediction in the tobit model	159
6.7 The two-limit tobit model	160
6.8 Models of friction	162
6.9 Truncated regression models	165
6.10 Endogenous stratification and truncated regression models	170
6.11 Truncated and censored regression models with stochastic and unobserved thresholds	174
6.12 Specification errors: heteroscedasticity	178
6.13 Problems of aggregation	182
6.14 Miscellaneous other problems	185
6.15 A general specification test	192
6.16 Mixtures of truncated and untruncated distributions	194
<b>Chapter 7. Simultaneous-equations models with truncated and censored variables</b>	<b>197</b>
7.1 Introduction: A general simultaneous-equations model	197
7.2 Simultaneous-equations models with truncation and/or censoring	199
7.3 Simultaneous-equations models with probit- and tobit-type selectivity	205
7.4 Models with mixed latent and observed variables	205
7.5 The question of logical consistency	214
7.6 Summary and conclusions	216
Appendix: ML estimation of the supply-and-demand model in section 7.2	216

<b>viii</b>	<b>Contents</b>	
	<b>Chapter 8. Two-stage estimation methods</b>	<b>221</b>
	8.1 Introduction	221
	8.2 Two-stage method for the tobit model	221
	8.3 Two-stage methods for switching regression models	223
	8.4 Two-stage estimation of censored models	228
	8.5 Two-stage estimation of Heckman's model	231
	8.6 Two-stage estimation of structural equations	234
	8.7 Probit two-stage and tobit two-stage methods	240
	8.8 Two-stage methods for models with mixed qualitative, truncated, and continuous variables	242
	8.9 Some alternatives to the two-stage methods	247
	8.10 Some final comments	252
	Appendix: Asymptotic covariance matrices for the different two-stage estimators	252
	<b>Chapter 9. Models with self-selectivity</b>	<b>257</b>
	9.1 Introduction	257
	9.2 Self-selection and evaluation of programs	260
	9.3 Selectivity bias with nonnormal distributions	267
	9.4 Some general transformations to normality	272
	9.5 Polychotomous-choice models and selectivity bias	275
	9.6 Multiple criteria for selectivity	278
	9.7 Endogenous switching models and mixture-distribution models	283
	9.8 When can the selection model be used, but not the mixture model?	288
	9.9 Summary and conclusions	289
	<b>Chapter 10. Disequilibrium models</b>	<b>291</b>
	10.1 Introduction	291
	10.2 The Fair and Jaffee model	292
	10.3 Maximum-likelihood methods: sample separation unknown	296
	10.4 Maximum-likelihood methods: sample separation known	305
	10.5 Some generalized disequilibrium models	310
	10.6 Price adjustment and disequilibrium	319
	10.7 Models with controlled prices	326
	10.8 Tests for disequilibrium	335

Table of Contents

[More information](#)

<b>Contents</b>	<b>ix</b>
10.9 Multimarket-disequilibrium models	337
10.10 Models for regulated markets and models for centrally planned economies	341
10.11 Summary and conclusions	343
<b>Chapter 11. Some applications: unions and wages</b>	<b>347</b>
11.1 Introduction	347
11.2 The Ashenfelter–Johnson study	348
11.3 The Schmidt and Strauss study	349
11.4 Lee’s binary-choice model	356
11.5 Alternative specifications of the unionism-wages model	359
11.6 The Abowd and Farber study	362
11.7 Summary and conclusions	364
Appendix: Some results on truncated distributions	365
Bibliography	373
Index	397
