## Index

---

- adiabatic demagnetisation
  - general coverage 7, 60–80
  - model calculations 65–9
  - geometry of the refrigerant 70–3
  - apparatuses 73–80
- Allen–Bradley resistors as thermometers, *see* carbon
- capacitance for thermometry, *see* glass carbon (C), electrical resistance of 87–9
- Carnot cycle 11
- cerous lanthanum magnesium nitrate (CLMN)
  - magnetic susceptibility of 81, 89–92
  - as refrigerant 60
  - deuterised 60
- cerous magnesium nitrate (CMN)
  - entropy of 8
  - magnetic susceptibility of 89–92
  - as refrigerant 1, 60
- chromic potassium alum 60
- circulation rate of a dilution refrigerator 40–1
- CLMN or CMLN, *see* cerous lanthanum magnesium nitrate
- CMN, *see* cerous magnesium nitrate
- cobalt-60 ( $^{60}\text{Co}$ ) 81
- copper (Cu)
  - entropy of 62–4
  - as refrigerant 1
  - as thermometer using NMR 91–4
- cryostats ('pots'),  $^3\text{He}$  and  $^4\text{He}$  25, 26
- dilution refrigeration
  - conventional method 24–30
  - alternative methods 43
- EPT-76, *see* International Practical Temperature Scales
- evaporation cooling 24
- Fermi degeneracy of solute  $^3\text{He}$  17, 37
- film burning or inhibiting still, *see* still
- film flow suppression 32
- free expansion 1
- gamma-ray anisotropy thermometry 81, 94
- germanium (Ge), electrical resistance of 87
- glass ( $\text{SiO}_2$ ), electrical capacitance for thermometry 89–90
- heat exchangers (of a dilution refrigerator) 34–43
- helium-3 ( $^3\text{He}$ )
  - melting, properties of 48
  - as refrigerant 1
  - superfluid transitions 13
  - melting pressure 14, 81
  - phase diagram 15, 48, 50
  - cryostats ('pots') 25, 26
  - properties of 29
  - entropies of liquid and solid on melting curve 47
- helium-4 ( $^4\text{He}$ )
  - as refrigerant 1
  - melting pressure 14
  - superfluid transition 14
  - phase diagram 15
  - cryostats ('pots') 25
- $^3\text{He}$ - $^4\text{He}$  mixtures
  - as refrigerant 1
  - dilute 17
  - dilute, saturated, properties of 29
  - specific heat 19, 29
  - osmotic pressure 18–20, 29, 31
  - vapour pressure 21
- hyperfine-enhanced Van Vleck paramagnets 69
- International Practical Temperature Scales 12, 84
- IPTS-68: *see* International Practical Temperature Scales
- inversion curve 5
- inversion temperature, maximum value of 7
- isenthalpic expansion 5

102 *Index*

- isentropic expansion 2
- Kapitza resistance 34, 39
- Kelvin scale 10, 81
- Korringa mechanism 66
- Leiden refrigerator 44–5
- Matsushita resistors as thermometers, *see* carbon
- mixing chamber (of a dilution refrigerator) 27
- melting pressure
  - $^3\text{He}$  14, 47, 81, 85
  - $^4\text{He}$  14
- NBS superconducting fixed point device 83
- noise thermometry 95
- nuclear magnetic resonance (NMR) 91–4
- nuclear orientation thermometry 81
- nuclear paramagnet (ideal) 64
- osmotic pressure of  $^3\text{He}$  dissolved in  $^4\text{He}$  18–20, 31
- phase diagrams:  $^3\text{He}$ ,  $^4\text{He}$ , and  $^3\text{He}/^4\text{He}$  mixtures 14, 15, 48
- phonons 18
- platinum NMR thermometry 81, 91–4
- Pomeranchuk refrigerator 46–59
- pots, *see* cryostats
- praesodymium nickel five ( $\text{PrNi}_5$ )
  - entropy of 62
  - as refrigerant 1
- Robinson oscillator 90–1
- rotons 18
- specific heat
  - $^3\text{He}/^4\text{He}$  mixtures 19, 29
  - $^3\text{He}$  29
- Speer resistors as thermometers, *see* carbon
- spin–lattice relaxation 66
- still (of a dilution refrigerator) 31–3
- superconducting transitions 13
- superfluid transitions
  - $^3\text{He}$  13
  - $^4\text{He}$  14
- thermal conductivity, *see* transport properties
- thermometry
  - general coverage 10, 81–95
  - temperature ranges of various types 82
- third law of thermodynamics 17
- transport properties:  $^3\text{He}/^4\text{He}$  mixtures 21–3
- two-fluid model for  $^3\text{He}/^4\text{He}$  mixtures 18
- Van der Waals fluid
  - internal energy of 2
  - entropy of 3
  - inversion curve of 5
  - enthalpy of 6
- Van Vleck paramagnets, *see* hyperfine-enhanced Van Vleck paramagnets
- vapour pressure
  - $^3\text{He}$  84
  - $^3\text{He}/^4\text{He}$  mixtures 21
- viscosity, *see* transport properties
- viscous heating in heat exchangers 42
- Wiedemann–Franz law 66
