This book is published as part of the joint publishing agreement established in 1977 between the Fondation de la Maison des Sciences de l'Homme and the Press Syndicate of the University of Cambridge. Titles published under this arrangement may appear in any European language or, in the case of volumes of collected essays, in several languages.

New books will appear either as individual titles or in one of the series which the Maison des Sciences de l'Homme and the Cambridge University Press have jointly agreed to publish. All books published jointly by the Maison des Sciences de l'Homme and the Cambridge University Press will be distributed by the Press throughout the world.

Cet ouvrage est publié dans le cadre de l'accord de co-édition passé en 1977 entre la Fondation de la Maison des Sciences de l'Homme et le Press Syndicate de l'Université de Cambridge. Toutes les langues européennes sont admises pour les titres couverts par cet accord, et les ouvrages collectifs peuvent paraître en plusieurs langues.

Les ouvrages paraissent soit isolément, soit dans l'une des séries que la Maison des Sciences de l'Homme et Cambridge University Press ont convenu de publier ensemble. La distribution dans le monde entier des titres ainsi publiés conjointement par les deux établissements est assurée par Cambridge University Press.

Acknowledgments

I want to thank, first of all, the Royal Swedish Academy of Sciences for making this study possible by giving me access to archival materials concerning the Nobel prizes in physics and chemistry from 1901 to 1915. The Academy committee (Nobelarkivkommittén or NOAK for short) that oversees the archives has helped me in every possible way. I am particularly grateful to two members of the committee, Dr. Wilhelm Odelberg and Professor Bengt Nagel, who have given me both encouragement and friendly counsel.

I am equally grateful to Dr. Stig Ramel, executive director of the Nobel Foundation, who helped me gain access to the archives and obtain the small grant from the Foundation that permitted Professor Roy MacLeod and me to carry out the first inventory of materials in the archives. The Nobel Foundation has kindly given its permission to reprint certain sections from the article I wrote with Robert M. Friedman, "The prizes in the context of Swedish science" in C. G. Bernhard, E. Crawford, and P. Sörbom (eds.), *Science, technology, and society in the time of Alfred Nobel* (Oxford, Pergamon Press, 1982), © 1982 The Nobel Foundation.

I have been fortunate, during the five years it has taken me to complete this study, to be able to devote almost all my time to research and writing. I owe this luxury to my employer, the Centre National de la Recherche Scientifique (CNRS), which also has provided me with research assistance. I am grateful to my research director at the CNRS, M. Gérard Lemaine, who has encouraged and supported me throughout this project. The project was carried out as part of the research program of the Groupe d'Etudes et de Recherches sur la Science (affiliated with the Ecole des Hautes Etudes en Sciences Sociales and the CNRS), headed by Gérard Lemaine.

[More information](#)**viii** *Acknowledgments*

Several organizations have provided material or other support during the different phases of this study. I owe a large debt of gratitude to the Stiftung Volkswagenwerk, which put up the money for the microfilming of the bulk of materials in the Nobel Archives. The Office for the History of Science and Technology at the University of California, Berkeley, has taken on the computer analysis of nominators and nominees for the Nobel prizes in physics and chemistry, the first results of which are presented in this book. I am grateful to Professor John Heilbron, director of the Office, and Ms. Jacqueline Craig for collaborating with me on this part of the study. I am also indebted to the organizations that have provided me with travel grants, specifically the CNRS, Stiftung Volkswagenwerk, the Maison des Sciences de l'Homme, and the Association Franco-Suédoise pour la Recherche.

To gain insight into the early history of the Nobel institution, I have had to consult many sources other than the official records. The correspondence of a large number of Swedish scientists have been particularly important for my work. Most of these correspondences I found at the Library of the Royal Swedish Academy of Sciences, where I always received a warm welcome and precious help. I am grateful to the staff at several other institutions for access to materials in their possession and for their assistance: in particular the Mittag-Leffler Institute, the Uppsala University Library, the Niels Bohr Library, and the Center for History of Physics of the American Institute of Physics. I am also indebted to Professor Albin Lagerqvist and Docent Anders Bäcklin for giving me access to the minutes of the Physical Societies in Stockholm and Uppsala. Permission to reprint portions of the papers of T. W. Richards has kindly been granted me by the Harvard University Archives. The same courtesy was extended to me by the Carnegie Institution of Washington, D.C., with respect to the papers of G. E. Hale.

Many colleagues and friends have contributed to my work, each in their own way; unfortunately, it is not possible to thank them all individually. I deeply regret that the two people who did the most to get me started on this project – Professors Stein Rokkan and Sten Lindroth – are no longer with us. Among those to whom I want to give special thanks are the following: Robert Marc Friedman for many stimulating conversations, much help in locating archival materials, and useful suggestions with respect to the drafts

ix

of this manuscript; Terry Shinn and John Heilbron for having read and criticized the final draft; Mary Jo Nye for letting me partake of her deep knowledge of atomistics; Anna-Lisa Arrhenius-Wold for helping me locate documents in the Arrhenius Collection and for sharing her memories of her father; and Alan Duff for having translated so elegantly the long quotation from Henri Poincaré's letter of nomination in the section "The campaigns of Mittag-Leffler" in Chapter 5. (All the other translations from Swedish, French, or German into English are my own.)

Special thanks are due to Robin Sutcliffe and Mary Barnett who typed the different drafts and to Anne Gjesdal who removed many errors from the bibliography.

Finally, I want to register my debt, but I would not know how to begin to repay it, to my parents who have cared for me during my frequent visits to Stockholm and to my husband and son who have borne my many absences cheerfully and never questioned the worthwhileness of my work.
