

CONTENTS

0.	Banach space background	1
1.	Finite rank operators : trace and 1-nuclear norm	12
2.	Finite sequences of elements : the quantities μ_1, μ_2	24
3.	The summing norms	31
4.	Other nuclear norms : duality with the summing norms	46
5.	Pietsch's theorem and its applications	54
6.	Averaging; type 2 and cotype 2 constants	64
7.	More averaging : Khinchin's inequality and related results	74
8.	Integral methods; Gaussian averaging	88
9.	2-dominated spaces	97
10.	Grothendieck's inequality	104
11.	The interpolation method for Grothendieck-type theorems	118
12.	Results connected with the basis constant	123
13.	Estimation of summing norms using a restricted number of elements.	133
14.	Pisier's theorem for $\pi_{2,1}$	139
15.	Tensor products of operators	145
16.	Trace duality revisited : integral norms	150
17.	Applications of local reflexivity	156
18.	Cone-summing norms	160
