

Contents

<i>Preface</i>	<i>vii</i>
1 Elastic materials	1
1.1 Definitions	1
1.2 Ligamentum nuchae: properties	5
1.3 Tendon	7
1.4 Mesogloea	10
1.5 Molecular mechanisms	12
1.6 Filled polymers and fibres	16
1.7 Muscle	17
2 Springs as muscle antagonists	22
2.1 Bivalve shells	22
2.2 Ligamentum nuchae: function	25
2.3 Sea anemones	27
3 Springs as energy stores: running	30
3.1 The bouncing ball principle	30
3.2 Energy fluctuations in human running	34
3.3 Kangaroos	35
3.4 Mathematical models	39
3.5 The arch of the foot	42
3.6 Hoofed mammals	45
3.7 Galloping	47
4 Springs as energy stores: swimming and flight	51
4.1 Principles	51
4.2 Hovering insects	56

vi	<i>Contents</i>	
	4.3 Fibrillar flight muscle	61
	4.4 The click mechanism	65
	4.5 Flexible feathers	69
	4.6 Whales	70
	5 Fibre-wound animals	72
	5.1 Helical fibres	72
	5.2 A worm-like model	74
	5.3 Fishes and whales	78
	6 Springs as catapults	81
	6.1 Catapults and jumping	81
	6.2 Locusts' jumping	83
	6.3 Heavy feet	87
	6.4 Click beetles	88
	7 Suspension springs and shock absorbers	91
	7.1 Suspension systems	91
	7.2 Loads on the head	95
	7.3 Paw pads	98
	7.4 Vibrations in the human skeleton	104
	7.5 Breathing while running	106
	8 Springs and control	110
	9 Springs and size	116
	9.1 Elastic similarity	116
	9.2 Dynamic similarity	121
	9.3 Compromises	125
	9.4 Flight	128
