## Contents

	<b>Preface</b>	<b>ix</b>
	<b>Chapter 1</b>	<b>1</b>
	<b>Equivariant cohomology of <math>G</math>-CW-complexes and the Borel construction</b>	
1.1	$G$ -CW-complexes and a comparison theorem for equivariant cohomology theories	3
1.2	The Borel construction	10
1.3	The Borel construction for 2-tori	22
1.4	The Borel construction for $p$ -tori	61
	<i>Exercises</i>	85
	<b>Chapter 2</b>	<b>92</b>
	<b>Summary of some aspects of rational homotopy theory</b>	
2.1	The Sullivan-de Rham algebra	92
2.2	Minimal models	96
2.3	Rational homotopy theory	99
2.4	Finite-dimensional rational homotopy	104
2.5	The Grivel-Halperin-Thomas theorem	106
2.6	Sullivan-de Rham theory for rational Alexander-Spanier cohomology	111
2.7	Formal spaces, formal maps and the Eilenberg-Moore spectral sequence	116

	<b>Chapter 3</b>	<b>129</b>
	<b>Localization</b>	
3.1	The Localization Theorem	130
3.2	The Localization Theorem for general $G$ -spaces	141
3.3	Equivariant rational homotopy	148
3.4	Equivariant rational homotopy for general $G$ -spaces	158
3.5	The Evaluation Theorem for torus actions	160
3.6	The ideals $\mathfrak{p}(K, c)$	166
3.7	Chang-Skjelbred modules and Hsiang-Serre ideals	175
3.8	Hsiang's Fundamental Fixed Point Theorem	189
3.9	Remarks on the Weyl group	205
3.10	The cohomology inequalities and other basic results	208
3.11	The Hirsch-Brown model and the Evaluation Theorem for $p$ -torus actions on general spaces	223
	<i>Exercises</i>	244
	<b>Chapter 4</b>	<b>253</b>
	<b>General results on torus and <math>p</math>-torus actions</b>	
4.1	Rank and Poincaré series	254
4.2	Generalities on torus actions	264
4.3	Almost-free torus actions and the rank of a space	269
4.4	More results on almost-free torus actions	280
4.5	The method of Browder and Gottlieb	286
4.6	Equivariant Tate cohomology	301
4.7	Two theorems on topological symmetry	326
4.8	Localization and the Steenrod algebra	332
4.9	The rational homotopy Lie algebra of a fixed point set	336
	<i>Exercises</i>	338
	<b>Chapter 5</b>	<b>342</b>
	<b>Actions on Poincaré duality spaces</b>	
5.1	Algebraic preliminaries	343
5.2	Poincaré duality for the fixed point set	347
5.3	Equivariant Gysin homomorphism, Euler classes and a formula of A.Borel	360
5.4	Torus actions and Pontryagin classes	383
5.5	Golber formulas and other results	386
	<i>Exercises</i>	394

Cambridge University Press

978-0-521-35022-8 - Cohomological Methods in Transformation Groups

C. Allday and V. Puppe

Table of Contents

vii

	<b>Appendix A</b>	<b>398</b>
	<b>Commutative algebra</b>	
A.1	Krull dimension	399
A.2	Modules	401
A.3	Primary decomposition	405
A.4	Homological dimension	408
A.5	Regular sequences	413
A.6	Cohen-Macaulay rings and modules	418
A.7	Evaluations and presentations	425
	<b>Appendix B</b>	<b>435</b>
	<b>Some homotopy theory of differential modules</b>	
B.1	Basic notions and elementary results	436
B.2	Applications to cochain complexes over graded algebras	448
	<i>Exercises</i>	454
	<b>References</b>	<b>456</b>
	<b>Index</b>	<b>466</b>
	<b>Index of Notation</b>	<b>469</b>
