## SUBJECT INDEX

---

- A*-conjugate functions 343, 363  
 Abel equation 5, 127–9, 142, 332, 351–2, 355, 365, 369, 372–3, 390, 391, 432–5, 437  
     convex solution 73, 83, 86, 93  
     multivalued solutions 168–9  
 analytically conjugate FPS 345, 350–1, 359  
 Anosov diffeomorphism 137  
 approximate solutions 291–3  
     polynomial 298–9  
 approximation by Lipschitzian mappings 296–7  
 approximation in Buck's sense 293–6  
 associative functions 371  
     Archimedean 371  
 associativity equation 371  
 automorphic functions 369, 385
- Babbage equation 421, 450–1  
 Banach Theorem 37  
     generalizations 37–43  
 Baron extension theorem 271–5  
 Bernoulli polynomials 90  
 Blaschke product 364  
 Böttcher equation 5, 32, 332, 339–42, 354, 362–3, 390–1, 393, 395–6, 404, 438–43, 445  
 branching processes 52–9
- c.n.d.* functions 183, 414–19  
 Cantor singular function 420  
 Cauchy functional equations 94, 236  
     on a curve 236–7, 268  
 Čebyšev polynomials 364, 406  
 change of variables 333  
 characterization of functions  
     cosine 399, 406–7  
     cotangent 420  
     exponentials 237, 265, 393–5  
     hyperbolic cosine 399, 406
- characterization of functions (*continued*)  
     identity 390, 392  
     linear function, 237, 268, 392  
     logarithm 393–5, 398  
     polynomials 91  
     reciprocal 390–2, 455–9  
     roots 391–3  
     sine 403, 406–7  
 characterization of norms 382–4, 386–7  
 chronon 10  
 coherent families of FPSs 364  
 commuting *see* permutable  
 comparison theorems 472  
 composition of functions 14, 46  
 composition of *rv*-functions 33  
 compositionally coherent families of FPSs 364  
 conditional limit probabilities 54  
 conjugacy 332  
 conjugacy equation 332  
 conjugate hat functions 360  
 conjugate trapezoid functions 360  
 continued fractions 157  
 continuous solutions of linear iterative functional inequalities *see* CSs  
 continuous dependence  
     continuous solutions of infinite order equations 299–302  
     continuous solutions of nonlinear equations 190  
      $C^r$  solutions of nonlinear equations 231  
     LAS 149, 154, 180, 219–21  
     transformations 43–6  
 continuous nowhere differentiable functions *see* *c.n.d.* functions  
 convergence of random splinters 35  
 convex functions of order  $p$  ( $p$ -convex) 89  
 cosine equation 399–402  
 $C^r$ -conjugate functions 343–4, 363  
 cross ratio 129–30

- CS 473  
 of homogeneous inequality: asymptotic behaviour 477; asymptotic properties 492–3, 503; comparison theorems 475, 484–5; regular 483–5, 492–4; representation theorems 476–7, 485–6  
 of inhomogeneous inequality: asymptotic behaviour 479, 502; best lower bound 488; estimates 478, 481–2, 489; regular 489–90  
 cycle of order  $k$  15  
 cyclic equations 244–8
- Darboux property 465–7, 470, 471  
 decomposition of two-place functions 243, 269  
 differential equations with deviated argument 378, 386  
 differentially algebraic functions 364  
 domain of attraction 18  
 maximal 20–3  
 doubly stochastic measures 138, 146–7  
 dynamic programming equation 92–3  
 dynamical systems 335
- equation of denumerable order 280–2, 322–4  
 Lipschitzian solutions 285–6  
 equation of linear iteration of second order 466  
 equation of  $n$ th order 237–9  
 continuous solutions 259  
 $C^r$  solutions 259–60  
 integrable solutions 260  
 measurable solutions 268  
 with iterates of single function 260–3; reduction 261–2  
 equations of infinite order  
 extending of continuous solutions in metric space 275  
 extension theorem of Baron 271–5  
 general existence-and-uniqueness theorem 276–9  
 special 279–80; Lipschitzian solutions 282–5; uniqueness condition 321–2; uniqueness implies existence 325–6  
 equivalence under iteration 14  
 ergodic theory, Boyarski's problem 266  
 essentially unique solution 170  
 Euler constant 412, 414  
 Euler equation  
 of gamma function 413  
 of invariant curves 466  
 Euler gamma function 407–14  
 complex 412  
 fundamental equation 407  
 Euler identity for sine 420
- $\{f\}$ -decreasing functions 473  
 $\{f\}$ -increasing functions 473  
 $\{f\}$ -monotonic functions 472, 473–4
- Fatou conjecture 23  
 Fechner law 11  
 fixed point 3, 15  
 attractive 17  
 of order  $k$  15  
 repulsive 48–9  
 strongly repulsive 48  
 flat function 254  
 flow 47  
 continuous 7  
 differentiable 47  
 Lebesgue measurable 47  
 rational 47  
 formal power series *see* FPS  
 formally conjugate FPS 345–9, 347, 359  
 Fourier series 415–9  
 Fourier transform 183  
 Fox integral equation (generalized) 183–4  
 FPS 345  
 fractional iterate *see* iterative root  
 Frobenius–Perron operator 240  
 functional equations in a single variable  $xv$   
 functional equations in several variables  $xv$
- Galton–Watson process  
 critical case 55  
 explosive case 95  
 simple 52, 81–3  
 supercritical case 95  
 with immigration 56–7, 83  
 Gauss multiplication theorem 410–12  
 Gaussian normal distribution 237, 265–6  
 general solution 4  
 generic properties 143–4, 183, 194  
 Goursat problem 178–9
- hairpin support 139
- idempotency equation 466  
 improper integrals 396–7, 398, 404  
 integral equation 146, 184  
 integral-functional equation 177  
 invariant curves 460–7, 471  
 Lipschitzian 461–6  
 invariant densities 240, 244  
 Riemann integrable 242  
 invariant measure *see* stationary measure  
 involutions 421, 450–5  
 involutory functions 450  
 iterate of a function 14  
 iteration group 47  
 iteration semigroup *see* flow  
 iterative functional equation  $xv$ , 11  
 iterative functional inequalities  
 linear: of first order 172, 474–9, 481–95, 501–3; of infinite order 499–501, 503; of second order 495–8  
 special nonlinear 320–2  
 iterative logarithm 346–52, 357–8  
 iterative residuum 346–7, 349

- iterative roots 421
  - $C^1$  class 430–6, 442–3
  - continuous 423–8
  - convex or concave 430–1, 437, 469
  - $C^r$  class 428–9
  - formal 446–8
  - homographic (of identity) 453–5
  - locally analytic 443
  - monotonic 423
  - of convex or concave functions 437, 469
  - of FPSs 446–8
  - of identity (primitive) 453
  - of iterative roots of identity 449
  - of strictly decreasing functions 426–7
  - of strictly increasing functions 424–5, 427–9, 431, 442–3
  - strictly decreasing 426–8
  - strictly increasing 424–5, 428–9
- iterative valuation 346–7, 349
  
- Jensen inequality 225–6
- JND 10
- Julia equation 124–6, 346, 361, 469
- Julia set 23
- just noticeable difference (JND) 10
  
- Karlin–McGregor function 388
- Koenigs algorithm 167, 367
- Kuratowski equivalence relation 14
  
- $L$ -intervals 401–2
- Laplace transform, continuity theorem 94
- LAS 150
- Lebesgue measure 175–6, 182–3
- Legendre duplication formula 412
- Lévy algorithm 367
- linear difference equation
  - convex solutions 72–3
  - monotonic solutions 68
  - $p$ -convex solutions 89–91
- linear equation dependent on a parameter 106–8
- linear equation of second order, Riemann
  - integrable solutions 409, 420
- linear equations
  - absolutely continuous solutions 177–8
  - asymptotics of solutions discontinuous at the origin 117–9
  - continuous solutions 97–106, 491;
    - asymptotic properties 108–115;
    - asymptotic series expansions 115–7;
    - indeterminate case 105, 143–4;
    - one-parameter family 99, 101, 105
  - convex solutions 69–73
  - differentiable solutions 119–22
  - integrable solutions 169–78, 182–3, 184
  - LAS 151–64, 181
  - meromorphic solutions 152, 165–71, 181
  - monotonic solutions 61–7
  - nonnegative solutions 59–61
- linear equations (*continued*)
  - regularly varying solutions 76–81, 84–6, 88–9
  - solutions of almost bounded variation 135
  - solutions of bounded variation 130–5, 146
  - topological space 148
- linear recurrence inequalities 264–5
  - system 263
- linearization 5, 334–9, 363–4
- Liouville numbers 156, 180
- local analytic solutions *see* LAS
- logarithmic convexity 407–8
  
- mateability 422
- Matkowski fixed point theorem 39–42
- matrix compatible with a group 246
- matrix equation 248, 253, 262
  - local  $C^\infty$  solutions 253–7
  - reduction to scalar systems 249–50
- metrically convex space 38
- Minkowski inequality 233
- multiplier 430
  - nonzero 430–8
  - primitive root of unity 447–9
  - unity 445–6
  - zero 438–43
  
- Nemitskiĭ operator 206
  - Lipschitzian 206–8, 232
- nonautonomous difference equations 387–8
- nonlinear equation of  $n$ th order 330–1
- nonlinear equations
  - asymptotic properties of solutions 200–4
  - bounded solutions 187–8, 191–4
  - continuous solutions 187–200, 230
  - $C^r$  solutions 208–16, 231
  - differentiable solutions in Banach spaces 232
  - extension of solutions 185–7, 195
  - $L^1$  solutions 225–6
  - LAS 216–9
  - Lipschitzian solutions 204–6
  - $L^p$  solutions 222–9
  - solutions differentiable at the origin 203–4
  
- O-flat function 254
- orbit 14
- order 1
- Ostrowski lemma 18–19
  
- peculiar curves 419–20
- permutable analytic functions 358–9
- permutable FPSs 356–7
- permutable functions 353–5
- PGFs 52–3, 55–7, 91
- piecewise linear mappings 240–3
- Poincaré–Bendixson theorem 48

- Poincaré equation 167, 388  
 poly-vibrating equation 179  
 pre-Schröder system 369–71, 385  
 primitive iterative root of identity 453  
 principal solution  
   of Abel equation 366–7  
   of Schröder equation 366–7  
 probability generating function *see* PGF  
 probability of extinction 54  
  
 Radon–Nikodym derivative 170, 181  
 random-valued function *see* rv-function  
 regular CS of homogeneous inequality 483  
 regular CS of inhomogeneous inequality 489  
 representation theorems 472  
 restricted stationary measure *see* RSM  
 Riemann zeta function 183  
 Roth Theorem 158, 180  
 RSM 58, 86–9  
 rv-function  
   composition 33  
   continuity 35  
   iterates 34  
  
 s.A. functions 371–5, 378  
   diagonals 372  
   generators 372  
 Schröder equation 5, 27, 55, 68–9, 82, 93, 95, 130, 332, 335, 354, 361–2, 365, 368, 382–3, 388, 394–5, 398, 432, 435–7, 444, 496, 498  
   convex solutions 74, 94  
    $C^r$  solutions in  $R^N$  336–9  
   differentiable solutions 122–3, 126–8, 145  
   LASs 167  
 second order differential equations  
   dispersion 141  
   phase 141  
 sequences of iterates *see* splinters  
 Siegel set 156, 354, 444  
 Sierpiński carpet 419  
  
 simultaneous equations  
   of Abel 378–82, 388  
   of Abel and Schröder 373–8  
   of Schröder 383–4, 387  
 slowly varying functions 75  
 solution depending on an arbitrary function 4  
 splinter 14  
   asymptotic behaviour 24–32  
   limit points 15  
 stability  
   interval 329  
   iterative 291  
   Lyapunov 286–90  
 stationary measure 57, 83–6  
 strict Archimedean associative functions *see* s.A. functions  
 successive approximations 16  
 sup-measurable function 222  
 supermartingale 35  
 synthesizing judgements 6–9  
 system of two linear equations 250–3, 266–7  
 systems of nonlinear equations of finite orders  
   analytic solutions 308  
   continuous solutions 304–5, 310–1  
   differentiable solutions 306–7, 311–13  
   integrable solutions 308–10, 330–1  
   solutions with given asymptotics 305–6  
  
 totally compositionally incoherent family of FPSs 364  
 translation equation 47  
  
 van der Waerden c.n.d. function 47, 418  
 Vitali Theorem 232  
  
 Weber function 10  
 Weber law 11  
 Weierstrass c.n.d. function 183, 414–19  
  
 Żukovski function 233–4
