Preface	xv
Symbols and conventions	xviii
0 Introduction	1
0.0 Preliminaries	1
0.0A Types of equations considered	1
0.0B Problems of uniqueness	2
0.0C Fixed points	3
0.0D General solution	4
0.0E Solution depending on an arbitrary function	4
0.1 Special equations	5
0.1A Change of variables	5
0.1B Schröder's, Abel's and Böttcher's equations	5
0.2 Applications	6
0.2A Synthesizing judgements	6
0.2B Clock-graduation and the concept of chronon	9
0.2C Sensation scale and Fechner's law	10
0.3 Iterative functional equations	11
 1 Iteration	 13
1.0 Introduction	13
1.1 Basic notions and some substantial facts	13
1.1A Iterates, orbits and fixed points	13
1.1B Limit points of the sequence of iterates	15
1.1C Theorem of Šarkovskii	16
1.1D Attractive fixed points	17
1.2 Maximal domains of attraction	20

vi	Contents	
1.2A	<i>Convergence of splinters</i>	20
1.2B	<i>Analytic mappings</i>	22
1.3	The speed of convergence of iteration sequences	23
1.3A	<i>Some lemmas</i>	24
1.3B	<i>Splinters behaving like geometric sequences</i>	26
1.3C	<i>Slower convergence of splinters</i>	27
1.3D	<i>Special cases</i>	30
1.4	Iteration sequences of random-valued functions	32
1.4A	<i>Preliminaries</i>	33
1.4B	<i>Convergence of random splinters</i>	35
1.5	Some fixed-point theorems	36
1.5A	<i>Generalizations of the Banach contraction principle</i>	37
1.5B	<i>Case of product spaces</i>	39
1.5C	<i>Equivalence statement</i>	42
1.6	Continuous dependence	43
1.7	Notes	46
2	Linear equations and branching processes	51
2.0	Introduction	51
2.1	Galton–Watson processes	52
2.1A	<i>Probability generating functions</i>	52
2.1B	<i>Limit distributions</i>	54
2.1C	<i>Stationary measures for processes with immigration</i>	56
2.1D	<i>Restricted stationary measures for simple processes</i>	58
2.2	Nonnegative solutions	59
2.2A	<i>Negative g</i>	60
2.2B	<i>Positive g</i>	60
2.3	Monotonic solutions	61
2.3A	<i>Homogeneous equation</i>	61
2.3B	<i>Special inhomogeneous equation</i>	64
2.3C	<i>General inhomogeneous equation</i>	65
2.3D	<i>An example</i>	66
2.3E	<i>Homogeneous difference equation</i>	68
2.3F	<i>Schröder’s equation</i>	68
2.4	Convex solutions	69
2.4A	<i>Lemmas</i>	69
2.4B	<i>Existence-and-uniqueness result</i>	71
2.4C	<i>A difference equation</i>	72
2.4D	<i>Abel’s and Schröder’s equations</i>	73
2.5	Regularly varying solutions	74
2.5A	<i>Regularly varying functions</i>	75
2.5B	<i>Homogeneous equation</i>	75

Contents	vii
2.5C <i>Special inhomogeneous equation</i>	78
2.6 Application to branching processes	81
2.6A <i>Conditional limit probabilities</i>	81
2.6B <i>Stationary measures</i>	83
2.6C <i>Restricted stationary measures</i>	86
2.7 Convex solutions of higher order	89
2.7A <i>Definitions and results</i>	89
2.7B <i>A characterization of polynomials</i>	91
2.8 Notes	91
3 Regularity of solutions of linear equations	96
3.0 Introduction	96
3.1 Continuous solutions	96
3.1A <i>Homogeneous equation</i>	97
3.1B <i>General continuous solution of the homogeneous equation</i>	99
3.1C <i>Inhomogeneous equation</i>	101
3.2 Continuous dependence of continuous solutions on given functions	106
3.3 Asymptotic properties of solutions	108
3.3A <i>Solutions continuous at the origin</i>	108
3.3B <i>Sample proofs</i>	111
3.3C <i>Asymptotic series expansions</i>	115
3.3D <i>Solutions discontinuous at the origin</i>	117
3.4 Differentiable solutions	119
3.5 Special equations	122
3.5A <i>Schröder's equation</i>	122
3.5B <i>Julia's equation</i>	124
3.5C <i>Abel's equation</i>	127
3.5D <i>A characterization of the cross ratio</i>	129
3.6 Solutions of bounded variation	130
3.6A <i>Preliminaries</i>	130
3.6B <i>Homogeneous equation</i>	132
3.6C <i>Inhomogeneous equation</i>	134
3.6D <i>Solutions of almost bounded variation</i>	135
3.7 Applications	137
3.7A <i>An Anosov diffeomorphism without invariant measure</i>	137
3.7B <i>Doubly stochastic measures supported on a hairpin</i>	138
3.7C <i>Phase and dispersion for second-order differential equations</i>	141
3.8 Notes	143
4 Analytic and integrable solutions of linear equations	148
4.0 Introduction	148

viii	Contents	
4.1	Linear equation in a topological space	148
4.2	Analytic solutions: the case $ f'(0) \leq 1$	150
4.2A	<i>Extension theorems</i>	150
4.2B	<i>Existence and uniqueness results</i>	152
4.2C	<i>Continuous dependence on the data</i>	154
4.3	Analytic solutions: the case $ f'(0) = 1$	155
4.3A	<i>The Siegel set</i>	156
4.3B	<i>Special inhomogeneous equation</i>	156
4.3C	<i>General homogeneous and inhomogeneous equations</i>	159
4.4	Analytic solutions: the case $f'(0) = 0$	160
4.5	Meromorphic solutions	165
4.6	Special equations	167
4.6A	<i>The Schröder equation</i>	167
4.6B	<i>The Abel equation</i>	168
4.7	Integrable solutions	169
4.7A	<i>Preliminaries</i>	170
4.7B	<i>A functional inequality</i>	172
4.7C	<i>Homogeneous equation</i>	174
4.7D	<i>Inhomogeneous equation</i>	174
4.7E	<i>Lebesgue measure</i>	175
4.8	Absolutely continuous solutions	177
4.8A	<i>Existence-and-uniqueness result</i>	177
4.8B	<i>A Goursat problem</i>	178
4.9	Notes	180
5	Theory of nonlinear equations	185
5.0	Introduction	185
5.1	An extension theorem	185
5.2	Existence and uniqueness of continuous solutions	187
5.2A	<i>Lipschitzian h</i>	187
5.2B	<i>Continuous dependence on the data</i>	190
5.2C	<i>Non-Lipschitzian h</i>	190
5.2D	<i>Existence via solutions of inequalities</i>	192
5.3	Continuous solution depending on an arbitrary function	194
5.3A	<i>Extension of solutions</i>	195
5.3B	<i>Nonuniqueness theorems</i>	195
5.3C	<i>Existence theorems</i>	197
5.3D	<i>Comparison with the linear case</i>	199
5.4	Asymptotic properties of solutions	200
5.4A	<i>Coincidence and existence theorems</i>	200
5.4B	<i>Solutions differentiable at the origin</i>	203
5.5	Lipschitzian solutions	204

Contents	ix
5.5A <i>Existence and uniqueness</i>	205
5.5B <i>Lipschitzian Nemytskiĭ operators</i>	206
5.6 <i>Smooth solutions</i>	208
5.6A <i>Preliminaries</i>	208
5.6B <i>Existence and uniqueness of C^r solutions</i>	210
5.6C <i>Lack of uniqueness of C^r solutions</i>	214
5.7 <i>Local analytic solutions</i>	216
5.7A <i>Unique solution</i>	217
5.7B <i>Continuous dependence on the data</i>	219
5.8 <i>Equations in measure space</i>	221
5.8A <i>Existence and uniqueness of L^p solutions</i>	222
5.8B <i>L^1 solutions</i>	225
5.8C <i>Extension theorems</i>	226
5.8D <i>L^p solution depending on an arbitrary function</i>	228
5.9 <i>Notes</i>	229
6 Equations of higher orders and systems of linear equations	235
6.0 <i>Introduction</i>	235
6.1 <i>Particular solutions of some special equations</i>	236
6.1A <i>Cauchy functional equations on a curve</i>	236
6.1B <i>The Gaussian normal distribution</i>	237
6.1C <i>Equation of Nth order</i>	237
6.1D <i>Proofs</i>	239
6.2 <i>Further applications</i>	240
6.2A <i>Invariant measures under piecewise linear transformations</i>	240
6.2B <i>Decomposition of two-place functions</i>	243
6.3 <i>Cyclic equations</i>	244
6.3A <i>Homogeneous equation with a finite group of substitutions</i>	245
6.3B <i>Compatibility</i>	246
6.3C <i>General solution</i>	247
6.4 <i>Matrix equation with constant g</i>	248
6.4A <i>Reduction to systems of scalar equations</i>	248
6.4B <i>Real solutions when some characteristic roots of g are complex numbers</i>	249
6.4C <i>Special system of two linear equations</i>	250
6.4D <i>Discussion of more general cases</i>	252
6.5 <i>Local C^∞ solutions of a matrix equation</i>	253
6.5A <i>Preliminaries</i>	253
6.5B <i>Existence of a unique solution</i>	254
6.5C <i>Solution depending on an arbitrary function</i>	255
6.5D <i>Two existence theorems</i>	257
6.6 <i>Smooth solutions of the equation of Nth order</i>	258

x	Contents	
6.6A	<i>Continuous and differentiable solutions</i>	259
6.6B	<i>Integrable solutions</i>	260
6.7	Equation of N th order with iterates of one function	260
6.7A	<i>Reduction of order</i>	261
6.7B	<i>Constant coefficients</i>	262
6.7C	<i>Reduction to a matrix linear equation</i>	262
6.8	Linear recurrence inequalities	263
6.8A	<i>System of inequalities</i>	263
6.8B	<i>Consequences for single inequalities</i>	264
6.9	Notes	265
7	Equations of infinite order and systems of nonlinear equations	270
7.0	Introduction	270
7.1	Extending solutions	271
7.1A	<i>General extension theorem</i>	271
7.1B	<i>Two sufficient conditions</i>	273
7.1C	<i>Extending of continuous solutions</i>	275
7.2	Existence and uniqueness	276
7.2A	<i>Basic result</i>	276
7.2B	<i>Important special case</i>	279
7.2C	<i>An application</i>	280
7.2D	<i>Lipschitzian solutions</i>	282
7.2E	<i>Denumerable order</i>	285
7.3	Stability	286
7.3A	<i>Main result</i>	286
7.3B	<i>Special results</i>	287
7.3C	<i>Comments</i>	290
7.4	Approximate solutions	291
7.4A	<i>Two special equations</i>	291
7.4B	<i>Approximation in Buck's sense</i>	293
7.4C	<i>Uniform approximation of a continuous mapping by a Lipschitzian one</i>	296
7.4D	<i>Polynomial approximate solutions</i>	298
7.5	Continuous dependence	299
7.5A	<i>A general result</i>	299
7.5B	<i>Important special case</i>	301
7.6	A survey of results on systems of nonlinear equations of finite orders	302
7.6A	<i>Continuous solutions of h-systems</i>	304
7.6B	<i>Solutions of h-systems with a prescribed asymptotic behaviour</i>	305
7.6C	<i>Differentiable solutions of h-systems</i>	307
7.6D	<i>Analytic solutions of h-systems</i>	308

Contents	xi
7.6E <i>Integrable solutions of h-systems</i>	308
7.6F <i>Continuous solutions of g-systems</i>	310
7.6G <i>Differentiable solutions of g-systems</i>	311
7.7 <i>Three sample proofs</i>	313
7.8 <i>Continuous solutions – deeper uniqueness conditions</i>	319
7.8A <i>A crucial inequality</i>	320
7.8B <i>Result for the testing equation</i>	322
7.8C <i>Proof of Theorem 7.8.1</i>	324
7.8D <i>Uniqueness implies existence</i>	325
7.9 <i>Notes</i>	327
8 On conjugacy	332
8.0 <i>Introduction</i>	332
8.1 <i>Conjugacy</i>	333
8.1A <i>Change of variables</i>	333
8.1B <i>Properties of the conjugacy relation</i>	333
8.2 <i>Linearization</i>	334
8.2A <i>The Schröder equation</i>	335
8.2B <i>Unique local C^r solutions in \mathbb{R}^N</i>	336
8.2C <i>Further results on smooth solutions</i>	339
8.3 <i>The Böttcher equation</i>	339
8.3A <i>Complex case</i>	339
8.3B <i>Asymptotic behaviour and regularity of real solutions</i>	341
8.4 <i>Conjugate functions</i>	342
8.4A <i>N-dimensional case</i>	342
8.4B <i>One-dimensional case</i>	343
8.5 <i>Conjugate formal series and analytic functions</i>	345
8.5A <i>Julia's equation and the iterative logarithm</i>	346
8.5B <i>Formally conjugate power series</i>	347
8.5C <i>Conjugate analytic functions</i>	350
8.5D <i>Abel's equation</i>	351
8.6 <i>Permutable functions</i>	353
8.7 <i>Commuting formal series and analytic functions</i>	355
8.7A <i>Formal power series that commute with a given one</i>	355
8.7B <i>Convergence of formal power series having iterative logarithm</i>	357
8.7C <i>Permutable analytic functions</i>	358
8.7D <i>Conjugacy again</i>	359
8.8 <i>Notes</i>	360
9 More on the Schröder and Abel equations	365
9.0 <i>Introduction</i>	365
9.1 <i>Principal solutions</i>	365

9.2	The pre-Schröder system	368
9.2A	<i>An equivalent system and automorphic functions</i>	368
9.2B	<i>Equivalence of the Schröder equation and the pre-Schröder system</i>	369
9.3	Abel–Schröder systems and the associativity equation	371
9.3A	<i>Strict Archimedean associative functions</i>	371
9.3B	<i>Abel and Schröder equations jointly</i>	373
9.3C	<i>Existence of generators</i>	374
9.3D	<i>A solution of the Abel–Schröder system</i>	375
9.4	Abel systems and differential equations with deviations	378
9.4A	<i>A group of transformations</i>	379
9.4B	<i>Systems of simultaneous Abel equations</i>	380
9.5	A Schröder system and a characterization of norms	382
9.5A	<i>Characterization of norms</i>	382
9.5B	<i>A system of simultaneous Schröder equations</i>	383
9.6	Notes	385
10	Characterization of functions	389
10.0	Introduction	389
10.1	Power functions	389
10.1A	<i>Identity</i>	389
10.1B	<i>Reciprocal</i>	390
10.1C	<i>Roots</i>	391
10.1D	<i>Comments</i>	392
10.2	Logarithmic and exponential functions	393
10.2A	<i>Logarithm</i>	394
10.2B	<i>Exponential functions</i>	395
10.2C	<i>An improper integral</i>	396
10.2D	<i>Comments</i>	398
10.3	Trigonometric and hyperbolic functions	399
10.3A	<i>Cosine and hyperbolic cosine</i>	399
10.3B	<i>Periodic solutions of the cosine equation</i>	399
10.3C	<i>Sine</i>	403
10.3D	<i>An improper integral</i>	404
10.3E	<i>Comments</i>	406
10.4	Euler’s gamma function	407
10.4A	<i>The fundamental functional equation</i>	407
10.4B	<i>Riemann-integrable solutions of an auxiliary equation</i>	409
10.4C	<i>Gauss’s multiplication theorem</i>	410
10.4D	<i>Complex gamma function</i>	412
10.4E	<i>Legendre’s duplication formula and Euler’s functional equation</i>	412
10.4F	<i>Logarithmic derivative of the gamma function</i>	414

Contents	xiii
10.5 Continuous nowhere differentiable functions	414
10.5A <i>The Weierstrass c.n.d. functions</i>	414
10.5B <i>A characterization of S_p by homogeneous equations</i>	415
10.5C <i>An inhomogeneous equation for S_p</i>	415
10.5D <i>Comments</i>	418
10.6 Notes	419
11 Iterative roots and invariant curves	421
11.0 Introduction	421
11.1 Purely set-theoretical case	422
11.2 Continuous and monotonic solutions	423
11.2A <i>Strictly increasing continuous iterative roots</i>	424
11.2B <i>Strictly decreasing roots of strictly decreasing functions</i>	425
11.2C <i>Strictly decreasing roots of strictly increasing functions</i>	427
11.3 Monotonic C^r solutions	428
11.4 C^1 iterative roots with nonzero multiplier	430
11.4A <i>A function with no smooth convex square roots</i>	430
11.4B <i>Necessary conditions</i>	431
11.4C <i>Main existence theorem</i>	432
11.4D <i>Convex and concave iterative roots</i>	436
11.5 C^1 iterative roots with zero multiplier	438
11.5A <i>Abundance of solutions</i>	438
11.5B <i>Convergence problem</i>	440
11.5C <i>Uniqueness conditions</i>	442
11.6 Complex domain and local analytic solutions	443
11.6A <i>Existence and uniqueness</i>	444
11.6B <i>Multiplier 1</i>	445
11.6C <i>Multiplier being a primitive root of unity</i>	447
11.6D <i>Fractional iterates of the roots of identity function</i>	449
11.7 Babbage equation and involutions	450
11.7A <i>Decreasing involutions</i>	451
11.7B <i>Primitive iterative roots, homographies</i>	453
11.8 Another characterization of reciprocals	455
11.8A <i>Dubikajtis' theorem</i>	455
11.8B <i>Volkman's theorem</i>	457
11.9 Invariant curves	459
11.9A <i>Simplifications and assumptions</i>	460
11.9B <i>Equation of invariant curves and its Lipschitzian solutions</i>	460
11.9C <i>Lack of uniqueness of Lipschitzian solutions</i>	463
11.9D <i>Comments</i>	465
11.9E <i>Euler's and other special equations</i>	466
11.10 Notes	458

xiv	Contents	
	12 Linear iterative functional inequalities	472
	12.0 Introduction	472
