

## CONTENTS

	<i>Preface to the second edition</i>	page ix
	<i>Preface to the first edition</i>	xi
1	Basic set theory and analysis	1
1	<i>Sets and functions</i>	1
2	<i>Real and complex numbers</i>	12
3	<i>Sequences of functions, continuity, differentiability</i>	17
4	<i>Inequalities</i>	20
2	Metric and topological spaces	23
1	<i>Metric and semimetric spaces</i>	23
2	<i>Complete metric spaces</i>	32
3	<i>Some metric and topological concepts</i>	38
4	<i>Continuous functions on metric and topological spaces</i>	48
5	<i>Compact sets</i>	59
6	<i>Category and uniform boundedness</i>	65
3	Linear and linear metric spaces	69
1	<i>Linear spaces</i>	69
2	<i>Subspaces, dimensionality, factorspaces, convex sets</i>	73
3	<i>Metric linear spaces, topological linear spaces</i>	86
4	<i>Basis</i>	98
4	Normed linear spaces	103
1	<i>Convergence and completeness</i>	103
2	<i>Linear operators and functionals</i>	108
3	<i>The Banach–Steinhaus theorem</i>	122
4	<i>The open mapping and closed graph theorems</i>	128
5	<i>The Hahn–Banach extension theorem</i>	132
6	<i>Weak topology and weak convergence</i>	141
5	Banach algebras	153
1	<i>Algebras and Banach algebras</i>	153
2	<i>Homomorphisms and isomorphisms</i>	157

Cambridge University Press

978-0-521-35868-2 - Elements of Functional Analysis, Second Edition

I. J. Maddox

Table of Contents

[More information](#)

		CONTENTS	
viii			
3	<i>The spectrum and the Gelfand–Mazur theorem</i>		160
4	<i>The Wiener algebra</i>		167
6	<b>Hilbert space</b>		172
1	<i>Inner product and Hilbert spaces</i>		172
2	<i>Orthonormal sets</i>		176
3	<i>The dual space of a Hilbert space</i>		180
4	<i>Symmetric and compact operators</i>		183
7	<b>Applications</b>		193
1	<i>Differential and integral equations</i>		193
2	<i>The Sturm–Liouville problem</i>		205
3	<i>Matrix transformations in sequence spaces</i>		215
	<i>Appendix</i>		228
	<i>Bibliography</i>		238
	<i>Index</i>		239
