TABLE OF CONTENTS

CHAPTER I. INTRODUCTION

		Theorems	*Pages*
1.1.	Finite, infinite, and integral inequalities		1–2
1.2.	Notations		2
1.3.	Positive inequalities		2–3
1.4.	Homogeneous inequalities		3–4
1.5.	The axiomatic basis of algebraic inequalities		4–5
1.6.	Comparable functions		5–6
1.7.	Selection of proofs		6–8
1.8.	Selection of subjects		8–11

CHAPTER II. ELEMENTARY MEAN VALUES

2.1.	Ordinary means		12–13
2.2.	Weighted means		13–14
2.3.	Limiting cases of $\mathfrak{M}_r(a)$	1–5	14–15
2.4.	Cauchy's inequality	6–8	16
2.5.	The theorem of the arithmetic and geometric means	9	16–18
2.6.	Other proofs of the theorem of the means		18–21
2.7.	Hölder's inequality and its extensions	10–11	21–24
2.8.	Hölder's inequality and its extensions (*cont.*)	12–15	24–26
2.9.	General properties of the means $\mathfrak{M}_r(a)$	16–17	26–28
2.10.	The sums $\mathfrak{S}_r(a)$	18–23	28–30
2.11.	Minkowski's inequality	24–26	30–32
2.12.	A companion to Minkowski's inequality	27–28	32
2.13.	Illustrations and applications of the fundamental inequalities	29–36	32–37
2.14.	Inductive proofs of the fundamental inequalities	37–40	37–39
2.15.	Elementary inequalities connected with Theorem 37	41–42	39–42
2.16.	Elementary proof of Theorem 3		42–43
2.17.	Tchebychef's inequality	43–44	43–44
2.18.	Muirhead's theorem	45	44–45

		Theorems	*Pages*
2.19.	Proof of Muirhead's theorem		46–48
2.20.	An alternative theorem	46–47	49
2.21.	Further theorems on symmetrical means	48–50	49–51
2.22.	The elementary symmetric functions of n positive numbers	51–55	51–55
2.23.	A note on definite forms		55–57
2.24.	A theorem concerning strictly positive forms	56–57	57–60
	Miscellaneous theorems and examples	58–81	60–64

CHAPTER III. MEAN VALUES WITH AN ARBITRARY FUNCTION AND THE THEORY OF CONVEX FUNCTIONS

3.1.	Definitions	82	65–66
3.2.	Equivalent means	83	66–68
3.3.	A characteristic property of the means $\mathfrak{M}_r$	84	68–69
3.4.	Comparability	85	69–70
3.5.	Convex functions		70–71
3.6.	Continuous convex functions	86–87	71–72
3.7.	An alternative definition	88–89	73–74
3.8.	Equality in the fundamental inequalities	90–91	74–75
3.9.	Restatements and extensions of Theorem 85	92–93	75–76
3.10.	Twice differentiable convex functions	94–95	76–77
3.11.	Applications of the properties of twice differentiable convex functions	96–97	77–78
3.12.	Convex functions of several variables	98–99	78–81
3.13.	Generalisations of Hölder's inequality	100–101	81–83
3.14.	Some theorems concerning monotonic functions	102–104	83–84
3.15.	Sums with an arbitrary function: generalisations of Jensen's inequality	105	84–85
3.16.	Generalisations of Minkowski's inequality	106	85–88
3.17.	Comparison of sets	107–110	88–91
3.18.	Further general properties of convex functions	111	91–94
3.19.	Further properties of continuous convex functions	112	94–96
3.20.	Discontinuous convex functions		96
	Miscellaneous theorems and examples	113–139	97–101

CHAPTER IV. VARIOUS APPLICATIONS OF THE CALCULUS

		Theorems	*Pages*
4.1.	Introduction		102
4.2.	Applications of the mean value theorem	140–143	102–104
4.3.	Further applications of elementary differential calculus	144–148	104–106
4.4.	Maxima and minima of functions of one variable	149–150	106–107
4.5.	Use of Taylor's series	151	107
4.6.	Applications of the theory of maxima and minima of functions of several variables		108–110
4.7.	Comparison of series and integrals	152–155	110–111
4.8.	An inequality of W. H. Young	156–160	111–113

CHAPTER V. INFINITE SERIES

5.1.	Introduction		114–116
5.2.	The means $\mathfrak{M}_r$		116–118
5.3.	The generalisation of Theorems 3 and 9		118–119
5.4.	Hölder's inequality and its extensions	161–162	119–121
5.5.	The means $\mathfrak{M}_r$ (*cont.*)	163	121–122
5.6.	The sums $\mathfrak{S}_r$	164	122–123
5.7.	Minkowski's inequality	165–166	123
5.8.	Tchebychef's inequality		123
5.9.	A summary	167	123–124
	Miscellaneous theorems and examples	168–180	124–125

CHAPTER VI. INTEGRALS

6.1.	Preliminary remarks on Lebesgue integrals		126–128
6.2.	Remarks on null sets and null functions		128–129
6.3.	Further remarks concerning integration		129–131
6.4.	Remarks on methods of proof		131–132
6.5.	Further remarks on method: the inequality of Schwarz	181–182	132–134
6.6.	Definition of the means $\mathfrak{M}_r(f)$ when $r \neq 0$	183	134–136
6.7.	The geometric mean of a function	184–186	136–138
6.8.	Further properties of the geometric mean	187	139
6.9.	Hölder's inequality for integrals	188–191	139–143

		Theorems	*Pages*
6.10.	General properties of the means $\mathfrak{M}_r(f)$	192–194	143–144
6.11.	General properties of the means $\mathfrak{M}_r(f)$ (*cont.*)	195	144–145
6.12.	Convexity of $\log \mathfrak{M}_r^r$	196–197	145–146
6.13.	Minkowski's inequality for integrals	198–203	146–150
6.14.	Mean values depending on an arbitrary function	204–206	150–152
6.15.	The definition of the Stieltjes integral		152–154
6.16.	Special cases of the Stieltjes integral		154–155
6.17.	Extensions of earlier theorems		155–156
6.18.	The means $\mathfrak{M}_r(f;\phi)$	207–214	156–157
6.19.	Distribution functions		157–158
6.20.	Characterisation of mean values	215	158–159
6.21.	Remarks on the characteristic properties		160–161
6.22.	Completion of the proof of Theorem 215		161–163
	Miscellaneous theorems and examples	216–252	163–171

CHAPTER VII. SOME APPLICATIONS OF THE CALCULUS OF VARIATIONS

7.1.	Some general remarks		172–174
7.2.	Object of the present chapter		174–175
7.3.	Example of an inequality corresponding to an unattained extremum	253–254	175–176
7.4.	First proof of Theorem 254		176–178
7.5.	Second proof of Theorem 254	255	178–182
7.6.	Further examples illustrative of variational methods	256	182–184
7.7.	Further examples: Wirtinger's inequality	257–258	184–187
7.8.	An example involving second derivatives	259–260	187–193
7.9.	A simpler problem	261	193
	Miscellaneous theorems and examples	262–272	193–195

CHAPTER VIII. SOME THEOREMS CONCERNING BILINEAR AND MULTILINEAR FORMS

8.1.	Introduction		196
8.2.	An inequality for multilinear forms with positive variables and coefficients	273–275	196–198
8.3.	A theorem of W. H. Young	276–277	198–200
8.4.	Generalisations and analogues	278–284	200–202

		Theorems	*Pages*
8.5.	Applications to Fourier series		202–203
8.6.	The convexity theorem for positive multilinear forms	285	203–204
8.7.	General bilinear forms	286–288	204–206
8.8.	Definition of a bounded bilinear form		206–208
8.9.	Some properties of bounded forms in $[p, q]$	289–290	208–210
8.10.	The Faltung of two forms in $[p, p']$	291	210–211
8.11.	Some special theorems on forms in [2, 2]	292–293	211–212
8.12.	Application to Hilbert's forms	294	212–214
8.13.	The convexity theorem for bilinear forms with complex variables and coefficients	295	214–216
8.14.	Further properties of a maximal set (x, y)		216–217
8.15.	Proof of Theorem 295		217–219
8.16.	Applications of the theorem of M. Riesz	296–297	219–220
8.17.	Applications to Fourier series		220–221
	Miscellaneous theorems and examples	298–314	222–225

CHAPTER IX. HILBERT'S INEQUALITY AND ITS ANALOGUES AND EXTENSIONS

9.1.	Hilbert's double series theorem	315–317	226–227
9.2.	A general class of bilinear forms	318	227–229
9.3.	The corresponding theorem for integrals	319	229–230
9.4.	Extensions of Theorems 318 and 319	320–322	231–232
9.5.	Best possible constants: proof of Theorem 317		232–234
9.6.	Further remarks on Hilbert's theorems	323	234–236
9.7.	Applications of Hilbert's theorems	324–325	236–239
9.8.	Hardy's inequality	326–327	239–243
9.9.	Further integral inequalities	328–330	243–246
9.10.	Further theorems concerning series	331–332	246–247
9.11.	Deduction of theorems on series from theorems on integrals	333	247–249
9.12.	Carleman's inequality	334–335	249–250
9.13.	Theorems with $0 < p < 1$	336–338	250–253
9.14.	A theorem with two parameters p and q	339–340	253–254
	Miscellaneous theorems and examples	341–367	254–259

CHAPTER X. REARRANGEMENTS

	Theorems	*Pages*
10.1. Rearrangements of finite sets of variables .		260–261
10.2. A theorem concerning the rearrangements of two sets	368–369	261–262
10.3. A second proof of Theorem 368		262–264
10.4. Restatement of Theorem 368	370	264–265
10.5. Theorems concerning the rearrangements of three sets	371–373	265–266
10.6. Reduction of Theorem 373 to a special case .		266–268
10.7. Completion of the proof		268–270
10.8. Another proof of Theorem 371		270–272
10.9. Rearrangements of any number of sets . .	374–376	272–274
10.10. A further theorem on the rearrangement of any number of sets	377	274–276
10.11. Applications		276
10.12. The rearrangement of a function		276–278
10.13. On the rearrangement of two functions . .	378	278–279
10.14. On the rearrangement of three functions .	379	279–281
10.15. Completion of the proof of Theorem 379 .		281–284
10.16. An alternative proof		285–287
10.17. Applications	380–383	288–291
10.18. Another theorem concerning the rearrangement of a function in decreasing order . .	384–385	291–292
10.19. Proof of Theorem 384		292–295
Miscellaneous theorems and examples . .	386–405	295–299
APPENDIX I. On strictly positive forms . . .	406–407	300
APPENDIX II. Thorin's proof and extension of Theorem 295	408	305
APPENDIX III. On Hilbert's inequality		308
BIBLIOGRAPHY		310
