

CONTENTS

	Foreword by Thomas S. Kuhn	<i>page</i> ix
	Preface	xv
	Notes on sources	xxi
	1 Introduction	1
Part I	The introduction of temporal discontinuity, 1896–1905	
	2 The electromagnetic impulse hypothesis of x-rays	15
	3 The analogy between γ -rays and x-rays	49
Part II	Ionization and the recognition of paradox, 1906–1910	
	4 Secondary rays: British attempts to retain mechanism	71
	5 The appeal in Germany to the quantum theory	104
Part III	Seeking an electrodynamic solution, 1907–1912	
	6 Localized energy in spreading impulses	135
	7 Problems with visible light	168
Part IV	Interference of x-rays and the corroboration of paradox, 1912–1922	
	8 Origins of x-ray spectroscopy	199
	9 Quantum transformation experiments	233
Part V	The conceptual origins of wave–particle dualism, 1921–1925	
10	Synthesis of matter and light	263
	Epilogue: The tiger and the shark	302
	Bibliography	309
	Index	347
