## *Acknowledgements*

This collection of papers and the First Conference in Laboratory Phonology, where many of them were first presented, could not have come about without the generous support of various organizations. Funds for the conference were provided by several offices at the Ohio State University including the Office for Research and Graduate Studies, the College of Humanities, and the Departments of Linguistics and Psychology. The Ohio State University and the Department of Modern Languages and Linguistics at Cornell University also contributed materially to preparing this volume. Essential support of a different sort was provided by Janet Pierrehumbert, who coined the term “laboratory phonology” for us, and who gave us crucial encouragement at many stages in organizing the conference and in editing this volume of papers.
