List of figures and tables	<i>page</i> xi
Preface	xix
1 Algebraic representations for complete social networks	1
Complete network data	5
Sources of network data	13
<i>The boundary of a network</i>	13
<i>Relational content</i>	14
<i>Network measurement</i>	17
<i>Reliability and validity of network data</i>	18
Structure in social networks	20
<i>Directed graphs</i>	21
<i>Some analyses for social network data</i>	22
Properties of a structural representation	32
An algebra for complete social networks	36
<i>Compound relations and network paths</i>	37
<i>Comparing paths in networks and the Axiom of Quality</i>	42
<i>The partially ordered semigroup of a network</i>	44
<i>An algorithm for semigroup construction</i>	49
Summary	54
2 Algebraic representations for local social networks	56
Types of local networks	58
<i>Representing local networks</i>	61
An algebra for local social networks	62
<i>Paths in local networks</i>	63
<i>Comparing paths in local networks</i>	64
<i>The local role algebra of a local network</i>	67
<i>An algorithm for constructing a local role algebra</i>	68
<i>The local role algebra of a subset in a local network</i>	70

viii	<i>Contents</i>	
	Role algebras	73
	<i>Relations among role algebras: The nesting relation</i>	75
	<i>Presentation of role algebras</i>	78
	<i>Local role algebras and role-sets</i>	79
	Partial networks and partial role algebras	81
	<i>The nesting relation for partial role algebras</i>	86
	<i>Analysis of local networks</i>	86
	Partially ordered semigroups and role algebras:	
	A summary	88
3	Comparing algebraic representations	90
	Isomorphisms of network semigroups	91
	<i>Some networks with isomorphic semigroups</i>	93
	Comparing networks: Isotone homomorphisms	96
	<i>The π-relation of an isotone homomorphism</i>	99
	<i>Partial orderings among homomorphisms and π-relations</i>	103
	Lattices of semigroups and π -relations	104
	<i>The joint homomorphism of two semigroups</i>	110
	<i>The common structure semigroup</i>	113
	<i>Lattices of semigroups: A summary</i>	114
	Local networks with isomorphic local role algebras	116
	Comparing local role algebras: The nesting relation	119
	Other classes of networks with identical algebras	123
	<i>Trees</i>	124
	<i>Idempotent relations</i>	128
	<i>Monogenic semigroups</i>	129
	<i>Handbooks of small networks</i>	133
	Summary	134
4	Decompositions of network algebras	135
	Decompositions of finite semigroups	137
	Direct representations	138
	<i>Existence of direct representations</i>	141
	Subdirect representations	146
	<i>Existence of subdirect representations</i>	149
	Factorisation	152
	<i>Uniqueness of factorisations</i>	155
	<i>An algorithm for factorisation</i>	156
	<i>Using factorisation to analyse network semigroups</i>	160
	<i>The reduction diagram</i>	161
	<i>Co-ordination of a partially ordered semigroup</i>	162
	<i>Relationships between factors</i>	163
	<i>Factorisation of finite abstract semigroups</i>	165

<i>Contents</i>	ix
A decomposition procedure for role algebras	166
Summary	171
5 An analysis for complete and local networks	172
An analysis for complete networks	173
Relational conditions of semigroup homomorphisms	173
<i>Generalisations of structural equivalence</i>	188
The correspondence definition	190
<i>Searching for minimal derived set associations</i>	199
<i>Analysing entire networks</i>	199
An example: Relational structure in a self-analytic group	201
Local networks	206
<i>Derived local networks</i>	207
A correspondence definition for local role algebras	208
Some applications	212
<i>Local roles in the Breiger–Ennis blockmodel</i>	212
<i>A General Social Survey network</i>	216
<i>The snowball network L</i>	220
<i>Local role algebras for two-block two-generator models</i>	222
Summary	223
6 Time-dependent social networks	224
A language for change	225
Some relational conditions for smooth change	226
An analysis of time-dependent blockmodels	228
<i>The development of relational structure</i>	230
A local role analysis of time-dependent blockmodels	234
7 Algebras for valued networks	238
The semigroup of a valued network	238
<i>Binary network semigroups from valued networks</i>	243
Local role algebras in valued local networks	247
Using valued network algebras	250
8 Issues in network analysis	251
Describing social context: Positions and roles	251
<i>Positions and roles</i>	252
The structure and content of relations	253
Some models for relational structure	256
<i>Strong and weak ties</i>	256
<i>The balance model</i>	258
<i>The complete clustering model</i>	258
<i>The transitivity model</i>	259

x	<i>Contents</i>	
	<i>Other triad-based models</i>	259
	<i>The First and Last Letter laws</i>	260
	<i>Permutation models for kinship structures</i>	260
	<i>Some other models</i>	261
	Describing common structure	261
	<i>Common relational forms in two self-analytic groups</i>	262
	<i>Common relational forms in two community elites</i>	266
	Social structure	270
	Analysing large networks	271
	References	273
	Appendix A Some basic mathematical terms	289
	Appendix B Proofs of theorems	292
	Author index	303
	Subject index	307
