

## CONTENTS

<i>Steering group</i>	viii
<i>Contributors</i>	ix
<i>Preface</i>	xii
<i>List of abbreviations</i>	xv
<b>1 Statistics and genetic toxicology – setting the scene</b>	
<i>D.P. Lovell</i>	1
1.1 Introduction	1
1.2 What is statistics for?	1
1.3 Is there a correct statistical analysis?	2
1.4 Experimental design	4
1.5 Statistical issues relevant to all mutagenicity assays	5
1.6 The use of historical controls and Bayesian methods	23
1.7 The use of decision rules	23
1.8 Future developments in statistics relevant to genetic toxicology	24
1.9 Conclusions	24
1.10 References	25
<b>2 Analysis of data from microbial colony assays</b>	
<i>G.A.T. Mahon et al.</i>	26
2.1 Introduction	26
2.2 Biological aspects	27
2.3 Statistical aspects	33
2.4 Conclusions	61
2.5 References	63
<b>3 Mammalian cell gene mutation assays based upon colony formation</b>	
<i>C.F. Arlett et al.</i>	66
3.1 Introduction	66
3.2 Experimental design	68
3.3 Methods of analysis	73

vi	<i>Contents</i>	
3.4	Example data and calculations	79
3.5	Discussion	96
3.6	Summary of recommendations	99
3.7	Acknowledgements	99
3.8	References	99
<b>4</b>	<b>Statistical evaluation of bacterial/mammalian fluctuation tests</b>	
	<i>W.D. Robinson et al.</i>	102
4.1	Introduction	102
4.2	Mammalian tests	110
4.3	Bacterial tests	130
4.4	Conclusions	138
4.5	References	139
<b>5</b>	<b>Analysis of data from <i>in vitro</i> cytogenetic assays</b>	
	<i>C. Richardson et al.</i>	141
5.1	Introduction	141
5.2	Biological factors affecting the form and structure of data	141
5.3	Preliminary statistical considerations	145
5.4	Comparison of test treatments with negative control	147
5.5	Analysis of data sets	149
5.6	Discussion	150
5.7	Recommendations on the assessment of data	152
5.8	Summary	153
5.9	References	153
<b>6</b>	<b>Statistical methods for sister chromatid exchange experiments</b>	
	<i>D. Cooke et al.</i>	155
6.1	Introduction	155
6.2	Experimental design	156
6.3	Preliminaries to analysis	160
6.4	Analysis of transformed data	169
6.5	Other methods of analysis	177
6.6	Size of experiments	178
6.7	Concluding remarks	182
6.8	References	183
<b>7</b>	<b>Statistical analysis of <i>in vivo</i> cytogenetic assays</b>	
	<i>D.P. Lovell et al.</i>	184
7.1	Introduction	184
7.2	The micronucleus test	184
7.3	<i>In vivo</i> chromosomal assays	204

<i>Contents</i>	<b>vii</b>
7.4 General discussion of issues arising during <i>in vivo</i> cytogenetic studies	227
7.5 Deciding whether a result is positive or negative	228
7.6 Conclusions	230
7.7 References	230
<b>8 Statistical methods for the dominant lethal assay</b>	
<i>D.O. Chanter et al.</i>	233
8.1 Introduction	233
8.2 Preliminary considerations	234
8.3 The statistical analysis	237
8.4 Conclusions	248
8.5 References	249
<b>9 Statistical methods for the design and analysis of mutation experiments with the fruit fly <i>Drosophila melanogaster</i></b>	
<i>R.D. Combes et al.</i>	251
9.1 Introduction and scope of chapter	251
9.2 The sex-linked recessive lethal assay	252
9.3 General considerations for statistical analysis	257
9.4 Application of statistics to the sex-linked recessive lethal assay	267
9.5 Conclusions	281
9.6 References	282
<i>Appendix 1 Glossary of terms</i>	284
<i>Appendix 2 Statistical software</i>	287
<i>Index</i>	292
