<i>Preface</i>	<i>page</i>	xi
I Theory		
1 Introduction		3
1.1 Toward a new political methodology		3
1.2 A language of inference		6
1.3 Concluding remarks		13
2 Conceptualizing uncertainty and inference		14
2.1 Probability as a model of uncertainty		14
2.2 Inverse probability as a failed model of inference		16
2.3 Likelihood as a model of inference		21
2.4 The Bayesian model of inference		28
2.5 Restrictive versus unrestrictive statistical models		30
2.6 Specification tests		35
2.7 Concluding remarks		36
3 The probability model of uncertainty		38
3.1 The probability model		38
3.2 Univariate probability distributions		41
Bernoulli distribution		42
Binomial distribution		43
Extended beta-binomial distribution		45
Poisson distribution		48
Negative binomial distribution		51
Normal distribution		53
Log-Normal distribution		54
Where derivation from first principles is difficult or indeterminate		56
3.3 Multivariate probability distributions		57
3.4 Concluding remarks		58
4 The likelihood model of inference		59
4.1 Likelihood and summary estimation		59

viii	Contents	
	4.2 Likelihood and point estimation	66
	Analytical methods	67
	Numerical methods	72
	4.3 An alternative representation of the likelihood function	73
	4.4 Properties of maximum likelihood estimators	74
	Regularity conditions	74
	Finite sample properties	75
	Asymptotic properties	77
	4.5 Problems to avoid with maximum likelihood estimators	81
	4.6 Precision of maximum likelihood estimators	83
	Likelihood ratio test	84
	Direct measures of precision	87
	Wald's test	90
	4.7 Likelihood and interval estimation	92
	4.8 Concluding remarks	93
	II Methods	
5	Discrete regression models	97
5.1	Binary variables	98
5.2	Interpreting functional forms	102
	Graphical methods	104
	Fitted values	106
	First differences	107
	Derivative methods	108
5.3	Alternative justifications for binary variable models	110
	Threshold models	110
	Utility maximization models	113
	First principles of first principles	114
5.4	Ordered categorical variables	115
5.5	Grouped uncorrelated binary variables	117
5.6	Grouped correlated binary variables	119
5.7	Counts of uncorrelated events	121
5.8	Counts of uncorrelated events with unequal observation intervals	124
5.9	Counts of correlated events	126
5.10	Concluding remarks	131
6	Models for tabular data	133
6.1	Notation	135
6.2	The log-odds (logit) model	136
6.3	A specification test	143
6.4	The log-proportion model	146

Contents	ix
6.5 The linear-proportion model	149
6.6 The log-frequency (log-linear) model	152
6.7 The log-odds model as a special case of the log-frequency model	158
6.8 Concluding remarks	160
7 Time series models	162
7.1 Stochastic explanatory variables	165
7.2 The influence of history	167
Exogenous variables	169
Past expectations	170
Past realizations	173
Past shocks	173
Combinations	176
7.3 Theoretical ambiguities	176
7.4 The first differences error correction model	181
7.5 The “standard” time series regression model	185
7.6 Concluding remarks	187
8 Introduction to multiple equation models	189
8.1 Identification	191
Example 1: Flat likelihoods	192
Example 2: Nonunique reparameterization	193
Example 3: Deterministic relationships among the ML estimators	194
What to do	196
8.2 Reciprocal causation	197
A linear model	198
8.3 Poisson regression models with unobserved dependent variables	201
8.4 Concluding remarks	207
9 Models with nonrandom selection	208
9.1 Censoring	208
9.2 Stochastic censoring	210
9.3 Stochastic truncation	213
9.4 Truncated and variance function event count models	216
A truncated negative binomial model	218
Truncated negative binomial with variance function	221
9.5 Hurdle event count models	222
9.6 Concluding remarks	229
10 General classes of multiple equation models	231
10.1 Factor analysis	231

Table of Contents
[More information](#)

x	Contents	
	10.2 Analyzing covariance structures	235
	10.3 A specification test	238
	10.4 A general linear structural equation model	239
	The general model	240
	The likelihood function	242
	Special cases	244
	General comments	247
	10.5 Concluding remarks	248
11	Conclusions	250
	<i>References</i>	255
	<i>Index</i>	269
