Acknowledgments

Many people generously provided useful leads and/or materials for discussion in this study. Their specific contributions are noted in the text itself. It is enough to say here that this book could not have been written without their understanding and support. It is a pleasure to thank again Arthur Birch, Elof Carlson, Bernard Davis, Karl Grell, Norman Horowitz, Reinhard Kaplan, Liselotte Kobb, Joshua Lederberg, Ralph Lewin, John A. Moore, David Nanney, Robert Olby, Elizabeth Ryan, Ruth Sager, Ruth Sonneborn, Herbert Stern, and James D. Watson.

Richard Ziemacki of Cambridge University Press and Homer Le Grand provided relentless encouragement for writing this book when it was in its early stages. As a referee for Cambridge University Press, Edward Yoxen offered constructive criticisms, advice, and reassurance when they were needed. Liselotte Kobb and Ralph Lewin offered friendship, support, and valuable criticisms of several chapters. I was also fortunate to capture the interest and suggestions of Bruno Latour, who was *la tour de force* in this department for three months when I was completing the final draft. Carole McKinnon, David Turnbull, Camille Limoges, Steve Cross, and my colleagues and students in the Department of History and Philosophy of Science, Melbourne University, have also been rich sources of inspiration. Bernd Bartl, Doug McCann, and Jane Alvarez helped in various ways, at different times during this project.

I would also like to thank Helen Wheeler and Edith Feinstein of Cambridge University Press, New York, and especially Rosalind Corman, copy editor, for skillful and meticulous attention to the text. The reader will also appreciate the beautiful drawings of microorganisms by David Hill of the Botany Department, University of Melbourne. Research for this book was generously supported with funds from the Australian Research Grant Scheme.
