	<i>Preface</i>	ix
	Introduction	1
1	The problem of space	26
	Society and space	26
	The problem of space	29
	The logic of discrete systems	33
	The inverted genotype	42
	Morphic languages	45
2	The logic of space	52
	Introduction	52
	Compressed descriptions	53
	Some examples	55
	Elementary generators: an ideographic language	66
3	The analysis of settlement layouts	82
	Individuals and classes	82
	A model for syntactic representation, analysis and interpretation: alpha-analysis	90
	A procedure for analysis	97
	Some differences	123
	An excursion into interpretation: two social paradigms of space?	140
4	Buildings and their genotypes	143
	Insides and outsides: the reversal effect	143
	The analysis of the subdivided cell	147
	Some examples of domestic space	155
	Two large complexes from the ethnographic record	163
5	The elementary building and its transformations	176
	Elementary buildings	176
	Reversed buildings and others	183
6	The spatial logic of arrangements	198
	From structures to particular realities	198
		vii

viii		Contents
	Abstract materialism	201
	The semantic illusion	206
7	The spatial logic of encounters: a computer-aided thought experiment	223
	A naive experiment	223
	Societies as encounter probabilities	234
8	Societies as spatial systems	242
	Some societies	242
	Notes towards a general theory	256
	Postscript	262
	The social logic of space today	262
	Notes	269
	Index	276
