978-0-521-38541-1 - The Problem of the Earth's Shape from Newton to Clairaut: The Rise of Mathematical Science in Eighteenth-Century Paris and the Fall of "Normal" Science

John L. Greenberg

Table of Contents

[More information](#)

Contents

<i>List of illustrations</i>	<i>page</i>	viii
<i>Preface</i>		xv
1 Isaac Newton's theory of a flattened earth (1687, 1713, 1726)		1
2 The state of the problem of the earth's shape in the 1720s: Stalemate		15
3 The revival of geodesy in Paris (1733–1735)		79
4 Pierre Bouguer and the theory of homogeneous figures of equilibrium (1734)		89
5 Maupertuis: On the theory of the earth's shape (1734)		107
6 Alexis-Claude Clairaut's first theories of the earth's shape		132
7 Interlude I: Integral calculus (1690–1741)		225
8 Interlude II: The Paris Academy's contest on the tides (1740)		400
9 Clairaut's mature theory of the earth's shape (1741–1743): First substantial connections between the revival of mathematics in Paris and progress in mechanics there		426
10 Epilogue: Fontaine's and Clairaut's advances in the partial differential calculus revisited, or the virtues of interrelated developments in mathematics and science, and the fall of "normal" science		620
<i>Notes</i>		637
<i>Bibliography</i>		755
<i>Index</i>		779
