<i>Preface</i>	x
<b>Introduction</b>	1
The need to know	1
The product in its environment	2
The materials cycle	3
The role of processing	4
Materials' structures	5
Selecting materials	6
<b>1 The impact of design on manufacturing industry</b>	7
1.1 The role of design in product manufacturing	7
1.2 The designer's contribution to the requirements of industry	11
1.3 Management functions associated with design	14
1.4 Design activity in a Company	15
1.5 The designer as a focus of knowledge	17
1.6 Attributes of good product design	19
1.7 Materials as a factor in design	21
<b>2 Expertise required for the design process</b>	23
2.1 The importance of mechanical design	23
2.2 Cost-effective materials and manufacturing processes	24
2.3 The challenge of materials selection	25
2.4 Materials aspects of design	27
2.5 Data bases and computer aids for materials selection	31
<b>3 An introduction to materials</b>	34
3.1 Properties and performance limitations	38
3.2 Salient features of main classes of materials	43
<b>4 Properties of metals and alloys</b>	55
4.1 Aspects of selecting metals	59
4.2 Characteristics of specific metals	67
4.3 Welding	73

vi	<i>Contents</i>	
	4.4 Machining	74
	4.5 Surface conversion	78
	<b>5 Properties of ceramics</b>	<b>79</b>
	5.1 General characteristics	79
	5.2 Varieties available	80
	5.3 Comparative properties	82
	5.4 Data on some specific ceramics	85
	5.5 New developments in ceramics and glass	87
	5.6 Fabrication processes	89
	5.7 Design factors	90
	<b>6 Properties of polymers</b>	<b>91</b>
	6.1 Types and varieties available	93
	6.2 Elastomers	95
	6.3 Cellular materials	96
	6.4 Plastic film	97
	6.5 Costs relative to other materials	97
	6.6 General properties of plastic materials	99
	6.7 Some specific aspects of plastics	105
	6.8 Fabrication routes	113
	6.9 Some aspects of plastics selection and design	119
	6.10 Some recent developments in polymers	122
	<b>7 Properties of composites</b>	<b>124</b>
	7.1 Definition of composite types	124
	7.2 Reinforcements in common use	127
	7.3 Advantages and limitations of composites	129
	7.4 Design considerations	134
	7.5 Production techniques	137
	7.6 Reinforced plastics	139
	<b>8 Materials' performance in service</b>	<b>143</b>
	8.1 Metals	144
	8.2 Ceramics	148
	8.3 Polymers	151
	8.4 Composites	161
	8.5 Flammability	164
	<b>9 Finishes and coatings as protective systems</b>	<b>182</b>
	9.1 Characteristics of surface coatings	187
	9.2 Selection of finishes	188
	9.3 Finishes for modifying surfaces	193
	9.4 Metal based surface layers	196
	9.5 Ceramic finishes	204
	9.6 Organic (paint) finishes	205

<i>Contents</i>	vii
<b>10 Materials reliability and service life</b>	<b>208</b>
10.1 Predicting service life	208
10.2 Design decisions	212
10.3 The lessons of failure in service	213
10.4 Failure of materials	214
10.5 Product quality	216
10.6 Use of statistics	218
<b>11 Factors controlling the selection of substitute materials</b>	<b>219</b>
11.1 Materials are not totally interchangeable	219
11.2 Reasons for substitution	220
11.3 Product improvement	223
11.4 Success and failure	224
11.5 Strategic materials and economics	225
11.6 Effects on production processes	228
<b>12 Material forming processes and design</b>	<b>230</b>
12.1 Metals	230
12.2 Polymers	235
12.3 Composites	237
12.4 Ceramics	238
12.5 Newer production possibilities	239
<b>13 Sources of information on materials</b>	<b>241</b>
13.1 Introduction	241
13.2 Location of documents	241
13.3 Published information	242
13.4 Current research	252
13.5 Further information sources	256
13.6 Materials suppliers	259
<b>14 Standards and materials</b>	<b>261</b>
14.1 Types of standards	261
14.2 Standards available	262
14.3 Codes of Practice	263
14.4 References on Standards	263
References	265
Bibliography	272
Index	274
