# Subject index

abduction, 37–38
ability, 47–52, 229–230
ABL(I)-admissible option, 174, 177–184
abl(i)lex-admissible, option, 176, 177–184, 214–216
agent, 149–154
Arrow's impossibility theorem, 216–218
average benefit principle, 161, 170–173
avoidance of error, 36–42

benefit comparison structure, 159–160, 164–170; grounded in truth value bearing assumptions, 165; and interpersonal comparability of benefits, 167–170, 194–198; and measurability of benefits, 167
benefit level dictatorship, 173–174
benevolence and conflict, 154–156; for each, 158–164; for all, 158–164, 212–213

categorical extension condition, 92
categorical optimality, *see* V-optimality
categorical preference, 91–95
causality and determinism, 229
caution, 39
choice consistency, 99–106, 145–147
choice functions, 86, 95
choosing and concluding, 53–58
cognitive value, 36–42 228; and practical values, 42–46, 228–229
concern structure, 161, 171; and conflict, 185–186; dictator permitting, 171; maximally conflicted, 172; oligarchy permitting, 171; symmetrical, 172
constant unit-variable origin piecemeal positive affine, 237
converse categorical extension condition, 92
credal probability, 111–112; and indeterminacy, 114–128
credal state, 111–112

decision problem under uncertainty, 109–110
direct inference, 52–53, 54
distribution of benefits, 177–184

E-optimal (VE-optimal) option, 112, 114
E-admissible (VE-admissible) option, 114, 232–233
expected value function (*e*-function), 112
expected value structure, 112, 114
extended value function (*ev*-function), 109

feasibility, 53–67; and admissibility, 58–67, 230

gamma minimax, 137–140

higher order preference, 223–224

incommensurable theories, 40–42
incontinence, 2–4, 223–224
indifference, 85
induction, 37–38
informational value, 36–42
institutional agents, 54

lexicographical maximin (leximin), 143–144, 175
lexicographical V-admissibility and revealed preference, 103–106
leximinb-admissible options, 175, 177–184, 214–216; Sen-leximinb-admissibility, 238–240

MAX$B_k$-admissible options, 174
maximal options, 90
MIN$B_k$-admissible options, 174
mixed option, 74; neutral for the agent, 74
mixture property, 74–77
moral dilemma, *see* unresolved conflict
moral struggle; of the first kind, *see* incontinence; of the second kind, *see* unresolved conflict

necessitarianism, 118
normal choice function, 96, 97–99

OPAD condition, 239
optimality, 86–91

P-admissible option, 232
personal benefit structure, 166

Index
More information

personalism, 119
possibility, 47–52, 229–230
preference and choice, 83–84; change of preference, 85–86; strict preference, 85; and value, 83–85; weak preference, 85
probability measure (normalizable and finitely additive), 232
property $\alpha$, 33–34, 98
property $\beta$, 98
property $\gamma$, 98
property $\epsilon$, 98
pure option, 74–75

quasi-optimality, 87

REU, 232
revealed preference, 95; revealed basic preference, 97
revealed optimal option, 95

S-admissible options (VS-admissible options), 126–127
security (minimax, maximin), 113, 125–128, 132–135
social benefit functional (SBFL), 200; anonymity, 211–212; condition I, 206–208; convexity, 202; invariance conditions, 202, 203, 210–211; lexicography, 204–206; paretian conditions (PI,SP and WP), 208–210
social welfare function (SWF), 202
social welfare functional (SWFL), 202–203
stochastic dominance, 235
strict Bayesianism, 115–122
strong generalization condition (SGC), 7, 225–226
sure–thing principle, 128–132

unresolved conflict, 1–2, 4–5, 227–228; cardinal, 79–80; and choice, 14–15; denial of, 13–16; and deontic logic, 20–24; and guilt, regret or making amends, 24–28; and inconsistency, 7–10, 20–24, 70 224–226; and moral inquiry, 14–15; ordinal, 79–80; and suspension of judgement, 5–13, 22–23, 70
utilitarianism, 162–164, 213–214; average and total utility, 186–190; classical, 190–192; and conflict, 162–164; and distribution, 162–164; preference utilitarianism, 192–198

V-admissibility, 10, 47, 69, 80; $V_i$-admissibility, 81–82; and revealed preference, 99–103
valuational consistency, 79; closure under positive affine transformation, 79; convexity, 79
value commitment, 5–7, 47, 69–71; constraints, 5–7, 47; scope of, 5–7
value pluralism, 45–46
value structure, 5, 47, 69–82 231; extended value structures, 109–110; lexicographically ordered hierarchies of value structures, 80–82
variable positive monotonic, 237
variable unit-variable origin piecemeal positive affine, 237
V-optimality, 93–94

ways of evaluation, 5, 69–74; permissibility of, 10–13, 47, 69; potential resolutions of conflicts between, 10–13, 77–79; represented by utility functions, 73–75; represented by weak orderings, 71–73
weak ordering, 89
weighted average principle, 12–13, 78
