Subject index

- abilities: crystallized vs. fluid, 95, 107–9;
 increase in number of, 100–1; level I
 and II, 95; primary mental, 92–4;
 verbal vs. spatial, 94
- ability to learn, 24
- accommodation, *see* equilibration
- adaptation, 75–6; to environment, 223,
 225–6, 231–2, 238, 278–9; and
 functioning in society, 48, 178–9
- age: chronological, 79; mental, 79–80
- agencies, 95
- algorithms, 130–2
- anti-intellectualism, 25–6
- apprehension, *see* principles of cognition,
 qualitative
- architecture of systems: PDP models and,
 144; and problem types, 138–9
- artificial intelligence, 45, 130–3; *see also*
 cognitive science
- assimilation, *see* equilibration
- associations, 89–90
- attention arousal, 165–6
- attributes of intelligence, 33–35;
 comparison of, in 1921 and 1986
 Symposia, 50–3; loci of, 36–49
- attribution of intelligence, 46
- automatization, 123, 277–8
- behavior and intelligence: academic, 40;
 practical, 41; social, 40
- beliefs as knowledge structures, 136
- Berkeley Growth Study: and absolute
 increases in intelligence, 107; factor
 analysis of, 101–3, 105; 5-stage model
 of, 105, 108
- bifactor theory, 94
- biology as basis of intelligence, 45
- bonds, 88–9; vs. connections, 89–90
- brain: right vs. left, 28 (*see also*
 hemispheric specialization); size, 173
- brain damage: and study of multiple
 intelligences, 262–3; types of, 166–9
- brain functioning, 163–6; blood flow
 studies of, 12, 176; and cell assemblies,
 164–5; differentiation of, 165–6;
 electrophysiological studies of, 173–6;
 and evoked potentials, 174–5; and
 functional cerebral space, 172–3; and
 gnostic units, 163; and hemispheric
 specialization, 166–73; and intelligence
 B, 164; modular, 172–3; and novelty,
 175; theories of, 163–6
- capacities as intelligence, 46, 95
- capacity, *see* memory, capacity and
 processing limitations
- cell assembly, 164–5
- circumplex, *see* radex
- cognitive map, 249, *see also* Mediated
 Learning Experience

340 *Subject index*

- cognitive science: architecture, 138–9; and belief systems, 136–7; and expert systems, 134; goals of, 130; heuristics and, 131–2; knowledge and, 133–8; learning and, 132 139–40; and levels of understanding, 139; and multiple indexing, 135; processes in, 130–2; and scripts, 135–6; views of intelligence of, 129–46
- comparativism, conditional, 224–32, *see also* cross-cultural views
- components, cognitive, 117–24; differences of, from cognitive correlates, 128–9; goal of research in, 117; limitations of theory of, 118–19, 124; tasks of, research, 117–18; theories of, 119–24; types of, 119–20, 121–2; *see also* triarchic theory of intelligence
- components, knowledge acquisition, 273–4; vs. knowledge structure, 273–4; selective encoding, combination, and comparison, 273; and vocabulary acquisition, 274
- components, performance, 271–3; in inductive reasoning, 272; number of, 272–3
- composition, 141–2
- computer science, *see* cognitive science; programs, computer
- connectionism, 171
- constructivism, dialectical, 197–200; assumptions of, 198; environmental context and, 198–9
- contents, cognitive 127–8
- context, levels of, 222–3; *see also* environment
- control, 76; or executive strategies, 206–7, *see also* metacomponents
- correlates, cognitive, 115–17; evaluation of, 116–17, 128–9
- cross-cultural views, 215–40; and contextualists, 221, 224–32; and models of differences, 216–21; psychometric dimensions of, 216–18; *see also* culture; relativism, cultural
- crystallized abilities, 95, 107–9; tests of, 107
- culture: and classification ability, 228–9; definition of, 216; and deprivation, 225–6; and intelligence, 42; and language learning, 229–31; and learning 224–5; and motor development, 225; noncognitive factors of, 238–9; and sorting ability, 227; and spatial memory, 228, 231–2; and stages of development, 235–7; and types of training, 226–7; *see also* metaphors, sociological; socialization of intelligence
- decalage, 189
- decline of test scores with age, 108–9
- deficiencies, cognitive: and Mediated Learning Experience, 248; types of, 248–9; *see also* retardation, mental
- definition of intelligence, experts', 33–53, *see also* implicit theories; loci of intelligence; symposia on intelligence
- deprivation, cultural, 247
- development in psychometric theories, 99–109; in content of factors, 103–6; in factor scores, 106–9; in number of factors, 100–1; in weights of factors, 101–2
- development, mechanisms of, 180, 192–3, 195, 197, 199–200, 202, 205–6, 206–7; critique of 181, 184–90; as equilibration, 180, 181–2; and individual difference, 190
- development, processes of, 192, 194, 197, 198, 201–2, 204–5, 208
- development, stages of, 13–14, 180, 182–4, 188–90, 193; and concrete operations, 180, 183; and culture, 235–7; and formal operations, 13–14, 180, 183–4; sensorimotor, 13, 180, 182–3, 225, 236, 237–8; transitional, 189
- development, structures of, 191–2, 193–4, 195–6, 198, 204
- dialectics, laws of, 197
- direction, 75, *see also* automatization
- dualism, 232–3
- education and metaphoric views of intelligence, 290–3
- education, *see* principles of cognition, qualitative
- energy, mental, 69–70, 88, 114
- environment: vs. inheritance, 165; as parameter of learning, 144; role of, in development, 180, 198–9, 202; role of, in triarchic theory, 278–82

Subject index

341

- epistemology, 178–84; and adaptation, 178–9; stages in, 179–80; *see also* development, stages of; neo-Piagetian views
- equilibration, 13, 180, 181–2
- evoked potential studies; of the brain, 10–11, 174–5; problems of, 11–12
- experience, level of, 275–8; automatization and, 277–8; novelty and, 275–7
- expert–novice studies, 127–8, 133; and expert systems, 134
- factors of intelligence: changes in, with age, 101–3, 106–9; content of, 103–6; study of infants and, 103; *see also* development; views of intelligence
- flexibility, development of, 210–11
- functionalism, 145
- g (or general factor), 47–8, 87–8, 94; as “bonds,” 88–9; vs. primary mental abilities, 92–4
- Gateway, *see* socialization of intelligence
- General Problem Solver (GPS), 132
- genius, 30–1
- Gesell Developmental Schedule, 104–5
- giftedness, 24, 296–9 *passim*; study of, 79
- gnostic units, 163
- government, as model of intelligence, 49
- group differences, 293–6
- hardware vs. software, 145–6
- Harvard Growth Study, 106–7
- hemispheric specialization, 166–173; brain damage and, 166–8; vs. cooperation, 171–3; development of, 171; and dominance, 169; lateral eye movements and, 170; sex differences, in, 171; style of information processing and, 160
- heuristics: domain-general, 131–2; and General Problem Solver, 132, and Logic Theorist, 131; and means–ends analysis, 132
- imitation, 30
- implicit theories, 53–68, 90; of American adults, 57–64; of children, 64–5; and cross-cultural studies, 55–6, 66–7; entity vs. incremental, 65; of experts, 63–4; factors of, 59–60; over life-span, 63; role of, 54–7; and social competence skills, 64–5
- impulses, inhibition of, 91–2
- individual differences: and cognitive science, 146; in development, 190; sources of, in intelligence, 47, 158–60
- inductive reasoning, 272
- inferences, 137–8; and “interestingness,” 137–8
- information processing: definition of, 115; development of, 208–9
- inheritance, 164–5
- innate potential (Intelligence A), 164–5
- insight problems, 156–7
- intelligence, types of: A, B, and C, 164–5; fluid vs. crystallized, 107–9; ideational vs. instinctive, 76; intuitive vs. analytical, 28, 32
- intelligence quotient (IQ), 80; deviation, 80
- “interestingness,” *see* inferences
- internalization, theory of, 242–3, 247 *see also* equilibration); and pointing, 242–3
- judgment, 29, 74–7
- knowledge: acquisition components, 273–4; base, 134; and beliefs, 136; and expert systems, 134; importance of, 133–4; organization, 135–6; scripts, 135–6; structure, 179–80, 273–4
- language: development in Piedmont Carolinas, 250–1, 252 (*see also* socialization of intelligence); learning and culture, 229–31
- lateral eye movements, *see* hemispheric specialization
- learning, 43–4; associative, 144; and culture, 224–5; regularity discovery and, 144; rules of, 143–4
- learning mechanisms, 139–40, 141–2; domain-general, 132; in PDP models, 142–5; in production systems, 141–2; self-organizing systems of, 132; 3 stages of, 141–2
- left–right brain, *see* hemispheric specialization
- literacy, 228–9
- loci of intelligence, 36, 37–8; in environment, 42; in individual, 36, 38–41; *see also* attributes of intelligence

342 *Subject index*

- logic, 30
 Logic Theorist (LT), 131–2
- M-space, 192, 198–9
 means–ends analysis, 132
 Mediated Learning Experience (MLE), 246–8; and cultural deprivation, 247; and internalization, 247; lack of, 248
 memory, 78, 98–9; capacity and processing limitations, 123–4; 197; tests of, 78; types of, 200–1; visuospatial, 228
 metacomponents, 121–3, 125, 268–71; and allocation of resources, 270–1; development of, 206–7; as monitoring processes, 271; as strategic selection, 269–70; types of, 268–71, *see also* triarchic theory of intelligence
 metaphors, 3–19; classification of, 4; and education, 290–3; and extremes of intelligence, 296–9; and group differences, 293–6; and practical implications, 285–6; as source of questions, 3; and testing, 286–90; and theoretical implications, 284–5; and types of theories, 5
 metaphors, anthropological, 14–16, 215; and context, 15; cultural relativism and, 15 (*see also* views of intelligence, cultural relativism); problems of, 15–16
 metaphors, biological, 10–12, 162–3, 176–7; and brain-damaged subjects, 10, 166–8; and brain functioning, 10–11, 163–6; electrophysiological data and, 112, 173–6
 metaphors, computational, 8–10, 112–14; and factors, 9; and individual differences, 9; problems of, 160–1; and processes, 8–9
 metaphors, epistemological, 12–14, 178; and individual differences, 14; and stage theories, 13–14 (*see also* Piaget, J.)
 metaphors, geographic, 6–8, 85; and individual differences, 110; shortcomings, of, 109–10
 metaphors, sociological, 16–17, 241
 metaphors, systems, 17–18, 261, 268
 mind, as block of wax, 24
 modeling, *see* Mediated Learning Experience
 motivation, 49, 81, 114; and cognition, 39–40; role of, 98
 multiple intelligences, 261–8; criteria for, 262–4; measurement of, 267; principles of, 261–2; vs. psychometric views, 266–7; vs. talents, 266; types of, 264–5
 neo-Piagetian views, 190–210; assumption of, 191; mechanisms of development of, 192–3; problem-solving strategies of, 192; stages of, 191; structure of thought, 191–2
 neuropsychology: and brain function, 162–6; and brain size, 173; and differentiation of brain functions, 165–6; and hemispheric specialization, 166–73; and organization of behavior, 164–5
 novelty, 275–7; ability to deal with, 119, 139; and electrophysiological brain studies, 175
 organization of information, 128; and planning, 165–6
 originality, 30–1
 parallel distributed processing (PDP), 142–5; constraints on learning, 144–5; control mechanism in, 144; model of learning, 143–4; vs. serial, 145–6
 performance components, 271–3; in inductive reasoning, 272; number of, 272–3
 planning, 44, *see also* metacomponents
 plasticity in old age, 109
 potencies, primordial, 114
 principles of cognition: qualitative, 112–14; quantitative, 114
 proceduralization, 141–2
 processes of cognition, 39, 44–5, *see also* components, cognitive; development, processes of
 production system, 141, *see also* learning proficiency, 45–6
 programs, computer, 134; ACT*, 140; BUGGY, 154; GPS, 132; hardware vs. software, 145–6; HEARSAY, 138; LT, 131; MYCIN, 138; POLITICS, 136; Perceptron and Pandemonium, 132, 140, 142; PERDIX, 157

Subject index

- prototypes of intelligence, 49, *see also* implicit theories
 provincial powers, 95
 psychometric views, 85–111
- quantitative ability, 152–8; computation and, 152–4; and insight, 156–7; and models of errors, 154, 156; problem solving and, 154–8; and problem representation, 155–6
- radex, 97–8
 relations, higher order, 209
 relativism, cultural, 15, 221, 224–32; and cognitive style, 223–4; and levels of context, 222–3; and psychological differentiation, 224; radical, 221–4
 retardation, mental, 296–9 *passim*;
 definition of, 74; *see also* deficiencies, cognitive
 Roadville, *see* socialization of intelligence
- schooling and culture, 226, 228, 235, *see also* learning; literacy
 scripts, 135–6
 sensitivity, 70–1
 sensori-input, 165–6
 simplex, *see* radex
 spatial ability vs. psychological differentiation, 224
 speech and practical activity, 243–4
 socialization of intelligence, 250–8; and communication, 254–5; and creativity, 257; and flexibility, 255–6; and holistic processing style, 252; and language development, 250–1, 252; and novelty, 256–7; and reading, 253–4; and space, 251–2; and time, 251–2
 sources of intelligence, *see* loci of intelligence
 strategies for solving problems:
 computational, 157–8;
 generate-and-test, 157; subgoals and, 158; *see also* quantitative ability
 strategy, choice of, 202–6; associative theory of, 203; computer simulation of, 203; modeling of, 202–6
 Structure of Intellect (SOI), 95–7; and study of infants, 103; test item types, 96–7
- style, cognitive, and culture, 223–4
 symposia on intelligence: 1921, 35–6; 1986, 42–9; comparison of, 49–53
- tasks, information-processing, 117–18;
 letter matching as, 115;
 memory-scanning and, 115
 tasks, Piagetian: methodology of, 185–7; performance in, 188–9; processes used in, 187–9; replicability of, 184–5
 testing of intelligence, 286–90
 tests of intelligence: and adaptive intelligence, 239–40; Binet vs. Galton on, 77; Binet tradition of, 77–9; CAVD theory of, 91; correlations among, 87; as definition of intelligence, 33–4; item types of Binet, 77–8; as measures of culturally valued products, 90; as measures of *g*, 90; SOI item types as 96–7; Stanford–Binet scales as, 79–80; Wechsler scales and, 80–2; WISC-R item types as, 81–2; *see also* crystallized abilities
 tests of intelligence, psychophysical, 70–2; discrediting of, 72–4; item types of, 71–2
 tetrad differences, 87–8
 theories of intelligence, *see* views of intelligence
 theory knitting, 18
 thinking: categorical, 226; counterfactual, 229; functional vs. taxonomic, 228–9; holistic vs. analytical, 227; *see also* socialization of intelligence, and holistic processing style
 Trackton, *see* socialization of intelligence
 training, cognitive, 125–7
 traits of intelligence: energy and sensitivity, 69–71; judgment, 74–7; mental energy, 88; *see also* understanding; wit
 triarchic theory of intelligence: and automatization, 277–8; and environmental context, 278–82; and knowledge acquisition components, 273–4; and metacomponents, 268–71; and novelty, 275–7; and performance components, 271–3; and vocabulary acquisition, 274
- understanding: and justification, 139; three levels of, 48–9, 139; universal, 26

344 *Subject index*

- universalism, 233–7; content vs. structural differences in, 233–4; and Piaget, 234–7
- variation, *see* individual differences
- verbal comprehension: bottom-up approach to, 148–9; knowledge-based approach to, 147–8; learning from context and, 150–2; top-down approach to, 149–52
- verbal fluency, 147
- views of intelligence: anarchic, 86; bioecological, 283; cognitive components, 117–24; cognitive contents, 127–8; cognitive correlates, 115–17, 128–9; cognitive training, 125–7; competence vs. performance, 189–90; conditional comparativism, 224–32; contemporary, *see* symposia on intelligence; cross-cultural, 215–40; cultural relativism, 221, 224–32; dialectical constructivism, 197–200; dualistic, 232–3; epistemological, 178–84 (*see also* development, stages of); ethnographic, 249–58 (*see also* socialization of intelligence); experimental structuralism, 200–2; heirarchical, 94–5; heterotypic vs. homotypic, 105; historical, 23–32; monarchic, 86; multiple intelligences, 261–8; neo-Piagetian, 190–210; oligarchic, 96; psychometric, 85–111; psychophysical, 70–1; as radex, 97–8; as rational thinking, 123; skill theory, 193–5; strategic choice, 202–6; structure-mapping, 195–7; Structure of Intellect, 95–7; ten-component, 119–20; triarchic, 268–83; twenty-factor, 98–9; two-factor, 87–8; universalism, 233–7
- vocabulary learning from context, 150–2; components of, 151–2; and contextual cues, 150; and mediating variables, 150–1
- wit: vs. judgment, 29; natural vs. acquired, 27; quick, 25
- work and intelligence, 29–30
- zone of potential development, 244–6; tests of, 245
