	<i>Preface</i>	ix
1	Introduction and preliminaries	1
1.1	The basic questions of ergodic theory	1
1.2	The basic examples	5
	A. Hamiltonian dynamics. B. Stationary stochastic processes. C. Bernoulli shifts. D. Markov shifts. E. Rotations of the circle. F. Rotations of compact abelian groups. G. Automorphisms of compact groups. H. Gaussian systems. I. Geodesic flows. J. Horocycle flows. K. Flows and automorphisms on homogeneous spaces.	
1.3	The basic constructions	10
	A. Factors. B. Products. C. Skew products. D. Flow under a function. E. Induced transformations. F. Inverse limits. G. Natural extensions.	
1.4	Some useful facts from measure theory and functional analysis	13
	A. Change of variables. B. Proofs by approximation. C. Measure algebras and Lebesgue spaces. D. Conditional expectation. E. The Spectral Theorem. F. Topological groups, Haar measure, and character groups.	
2	The fundamentals of ergodic theory	23
2.1	The Mean Ergodic Theorem	23
2.2	The Pointwise Ergodic Theorem	27
2.3	Recurrence	33

vi	<i>Contents</i>	
2.4	Ergodicity	41
2.5	Strong mixing	57
2.6	Weak mixing	64
3	More about almost everywhere convergence	74
3.1	More about the Maximal Ergodic Theorem	74
	A. Positive contractions. B. The maximal equality. C. Sign changes of the partial sums. D. The Dominated Ergodic Theorem and its converse.	
3.2	More about the Pointwise Ergodic Theorem	90
	A. Maximal inequalities and convergence theorems. B. The speed of convergence in the Ergodic Theorem.	
3.3	Differentiation of integrals and the Local Ergodic Theorem	100
3.4	The Martingale convergence theorems	103
3.5	The maximal inequality for the Hilbert transform	107
3.6	The ergodic Hilbert transform	113
3.7	The filling scheme	119
3.8	The Chacon–Ornstein Theorem	126
4	More about recurrence	133
4.1	Construction of eigenfunctions	133
	A. Existence of rigid factors. B. Almost periodicity. C. Construction of the eigenfunction.	
4.2	Some topological dynamics	150
	A. Recurrence. B. Topological ergodicity and mixing. C. Equicontinuous and distal cascades. D. Uniform distribution mod 1. E. Structure of distal cascades.	
4.3	The Szemerédi Theorem	162
	A. Furstenberg’s approach to the Szemerédi and van der Waerden Theorems. B. Topological multiple recurrence, van der Waerden’s Theorem, and Hindman’s Theorem. C. Weak mixing implies weak mixing of all orders along multiples. D. Outline of the proof of the Furstenberg– Katznelson Theorem.	
4.4	The topological representation of ergodic transformations	186
	A. Preliminaries. B. Recurrence along IP-sets. C. Per- turbation to uniformity. D. Uniform polynomials.	

	<i>Contents</i>	vii
	E. Conclusion of the argument.	
4.5	Two examples	209
	A. Metric weak mixing without topological strong mixing.	
	B. A prime transformation.	
5	Entropy	227
5.1	Entropy in physics, information theory, and ergodic theory	227
	A. Physics. B. Information theory. C. Ergodic theory	
5.2	Information and conditioning	234
5.3	Generators and the Kolmogorov–Sinai Theorem	243
6	More about entropy	249
6.1	More examples of the computation of entropy	249
	A. Entropy of an automorphism of the torus. B. Entropy of a skew product. C. Entropy of an induced transformation.	
6.2	The Shannon–McMillan–Breiman Theorem	259
6.3	Topological entropy	264
6.4	Introduction to Ornstein Theory	273
6.5	Finitary coding between Bernoulli shifts	281
	A. Sketch of the proof. B. Reduction to the case of a common weight. C. Framing the code. D. What to put in the blanks. E. Sociology. F. Construction of the isomorphism.
