Introduction

Chapter 0. Summary of Preliminaries

§1. Relative viewpoint	1
§2. Singularities	6
§3. Intersection theories	9
§4. Semipositive line bundles and vanishing theorems	14
§5. Birational classification of algebraic varieties	19

Chapter I. Δ -genus and Apollonius Method

§1. Characterizations of projective spaces	22
§2. Basic notions in the Apollonius method	25
§3. Iteration of the Apollonius method	28
§4. Existence of a ladder	31
§5. Classification of polarized varieties of Δ -genus zero	38
§6. Polarized varieties of Δ -genus one: First step	43
§7. Results of Lefschetz type	55
§8. Classification of Del Pezzo manifolds	62
§9. Polarized varieties of Δ -genus one: remaining cases	77
§10. Polarized manifolds of Δ -genus two	83

Chapter II. Sectional Genus and Adjoint Bundles

§11. Semipositivity of adjoint bundles	93
§12. Polarized manifolds of sectional genus ≤ 1	107
§13. Classification of polarized manifolds of a fixed sectional genus: higher dimensional cases	108
§14. Classification of polarized surfaces of a fixed sectional genus	114
§15. Polarized manifolds of sectional genus two	122

Chapter III. Classification Theories of Projective Varieties

§16. Castelnuovo bounds	139
§17. Varieties of small degrees	147
§18. Adjunction theories	151

Chapter IV. Related Topics and Generalizations

§19. Singular and quasi-polarized varieties	164
§20. Ample vector bundles	171
§21. Computer-aided enumeration of ruled polarized surfaces of a fixed sectional genus	176
