978-0-521-39563-2 - Plant Canopies: Their Growth, Form and Function

Edited by G. Russell, B. Marshall and P. G. Jarvis

Index

[More information](#)

INDEX

- accumulated temperature, *synonym of* thermal time q.v.
- adaptation, 139–40, 150–1
- age structure, 111–13, 116–17, 120–2
- air pollution, 36
- albedo, *see* reflection coefficient
- attenuation coefficient, 24–5
see also extinction coefficient
- biomass, 23, 31, 91
- boundary layer; *see also* resistance
convective, 63–9
leaf, 165
planetary, 42
- branching, 107, 112, 147–51
see also tillering
- canopy
closure, 3
energy balance, *see* energy balance
influences: nutrition, 83–99, 113–17, 119, 155; light, 111–13, 129–40; temperature, 35, 84; water, 35, 88–9, 134–7
processes, 161–74; *see also* leaf demography, evaporation, fluxes, photosynthesis, radiation absorption, respiration
structure, 143–57; description, *see* methods; measurement, *see* methods
temperature, 84
- carbon assimilation, 77, 85–7
see also photosynthesis
- conductance, *inverse of* resistance q.v.
- convective boundary layer, *see* boundary layer
- conversion ratio
assimilate to dry matter, 29, 88–9
CO₂ to dry matter, 27
quanta to CO₂, 27
see also dry matter: radiation quotient
- defoliation, 31, 126
- demography, *see* leaf
- development, *see* phenology
- diaheliotropic movements, *see* solar tracking
- dry matter: radiation quotient, 22, 27–31, 35
- eddy diffusivity, 45, 52, 57
- energy balance
of canopies, 63, 84
of leaves, 133–6, 164
- entrainment, 66, 71–6
- evaporation, 67–9, 71–5, 77–9
see also transpiration, fluxes
- evolution, 149
- extinction coefficient of light, 4, 8–9, 137
see also attenuation coefficient
- floral initiation, 107
- flowering, *see* reproductive growth fluxes
CO₂, 47, 54, 76–7
heat, 47, 54
momentum, 43, 47, 54
water, 43, 47, 54, 63, 67–79
- green area index, *see* leaf area index
- growth analysis, 21–2
- growth rate, *see* productivity
- heliotropic movements, *see* solar tracking
- herbivory, *see* defoliation
- leaf
angle distribution, 4–7, 34–5, 130, 134, 137–9
area density, 3, 5–6, 32–4
area formation, 36; effect of nitrogen, 93–4
area index, 4, 25, 32, 135–9, 155–7, 167

178 *Index*leaf (*contd.*)

- birth, *see* leaf demography
- boundary layer, *see* boundary layer
- death, *see* leaf demography
- demography, 30–1, 105–24; effect of shading on, 111–13; effect of nutrition on, 113–19
- energy balance, *see* energy balance
- longevity, 98, 118, 126
- temperature, 136

methods for

- canopy structure description, 1–10
- canopy structure measurement, 10–16
- intercepted radiation measurement, 24–7
- sampling, 2, 11

model

- building, 161–3
- of canopy, 161–74
- of layer type, 3
- of plant stand, 36, 95
- testing, 168–72

momentum transfer, 42–3

net assimilation, *see* growth analysis, carbon assimilation

nitrogen

- effects on crop growth, 83–99
- uptake, 91–2

nutrition, *see* canopyPAR, *see* radiationparaheliotropic movements, *see* solar tracking

partitioning

- of carbon compounds, 28–9, 87–8
- of nitrogen compounds, 92–3

phenology, 84, 93–4, 107, 112, 123, 152–3

photoperiod, 84, 106

photosynthesis, 30, 77, 85

- effect of solar tracking on, 131–8

photosynthetic photon flux density, 24, 129

- see also* radiation

phyllochron, 107

planetary boundary layer *see* boundary layer

plant

- architecture, 143–57
- breeding, 31
- productivity, 22, 27–8, 84, 137
- profiles of
 - CO₂, 47, 77, 165
 - radiation, 165
 - water vapour, 47, 65, 69, 165

wind, 46, 54, 58, 165

radiation

- absorption, 21–7, 31–2, 138, 173
- interception, *see* absorption
- photosynthetically active (i.e. PAR), 24, 30
- solar, 24–5, 28, 30
- reflection coefficient, 29
- reflectivity, 23–5
- remote sensing, 169, 173
- reproductive growth, 94–5, 107, 112–13, 152–4
- resistance
 - aerodynamic, 68–9
 - boundary layer, 43
 - canopy, 73, 78–9
 - stomatal, 43, 90
- respiration, 29, 87–8

sampling, *see* methods

senescence, 35

- see also* leaf demography

solar tracking by leaves, 129–40

spatial distribution, *see* variation

specific leaf area, 85

stomata, 35, 84, 89

- see also* resistance

temperature, *see* canopy, fluxes, leaf, profilestemporal variation, *see* variation

thermal time, 98, 106

tillering, 107, 155–7

- see also* branching

transpiration, 89–91, 166

- see also* evaporation, fluxes

turbulent transfer

- Eulerian theory of, 44–8
- from canopies, 63–79
- Lagrangian theory of, 48–54
- within canopies, 41–59

turnover

- of dry matter, 29
- of protein, 96–7
- of tiller, 120

variation

- spatial: in models, 163; of canopy elements, 5, 8–10, 32–3, 45, 105; of plants, 3; of turbulence, 45; regional, 76; scale of, 1
- temporal: annual, 36, 120–4, 156–9; diurnal, 133, 169; multi-annual, 30; scale of, 1

water, *see* canopy, profiles, fluxes
