CONTENTS

Foreword	vii
List of Main Lectures	ix
List of Participants	xi
Introduction	ix
Acknowledgments	xiv
A note on H. Ishihara and W. Takahashi modulus of convexity J. Alonso, A. Ullán	1
A property of non-strongly regular operators S. Argyros, M. Petrakis	5
The entropy of convex bodies with 'few' extreme points K. Ball, A. Pajor	25
Spaces of vector valued analytic functions and applications O. Blasco	33
Notes on approximation properties in separable Banach spaces P.G. Casazza, N.J. Kalton	49
Moduli of complex convexity W. Davis	65
Grothendieck type inequalities and weak Hilbert spaces M. Defant, M. Junge	71
A weak topology characterization of $l_1(m)$ S.J. Dilworth	89
Singular integral operators: a martingale approach T. Figuel	95
Remarks about the interpolation of Radon-Nikodym operators N. Ghoussoub, B. Maurey, W. Schachermayer	111
Symmetric sequences in finite-dimensional normed spaces W.T. Gowers	121
Some topologies on the space of analytic self-maps of the unit disk H. Hunziker, H. Jarchow, V. Mascioni	133
Minimal and strongly minimal Orlicz sequence spaces N.J. Kalton	149
Type and cotype in Musielak-Orlicz spaces A. Kaminska, B. Turett	165
On the complex Grothendieck constant in the n-dimensional case H. König	181
Pathological properties and dichotomies for random quotients of finite-dimensional Banach spaces P. Mankiewicz, N. Tomczak-Jägermann	199
A note on a low M^* -estimate V. Milman	219

vi

The $p^{1/p}$ in Pisier's factorization theorem S.J. Montgomery-Smith	231
Almost differentiability of convex functions in Banach spaces and determination of measures by their values on balls D. Preiss	237
When E and $E[E]$ are isomorphic C.J. Read	245
A note on Gaussian measure of translates of balls M. Talagrand	253
Sublattices of $M(X)$ isometric to $M[0,1]$ L.W. Weis	257
