Introduction	1
Summary	21
Part I. Algebra	
§1. Algebraic Poincaré complexes	25
§2. Algebraic normal complexes	38
§3. Algebraic bordism categories	51
§4. Categories over complexes	63
§5. Duality	74
§6. Simply connected assembly	80
§7. Derived product and Hom	85
§8. Local Poincaré duality	89
§9. Universal assembly	94
§10. The algebraic $\pi$ - $\pi$ theorem	109
§11. $\Delta$ -sets	117
§12. Generalized homology theory	122
§13. Algebraic $\mathbb{L}$ -spectra	134
§14. The algebraic surgery exact sequence	144
§15. Connective $L$ -theory	151
Part II. Topology	
§16. The $L$ -theory orientation of topology	173
§17. The total surgery obstruction	189
§18. The structure set	195
§19. Geometric Poincaré complexes	202
§20. The simply connected case	209
§21. Transfer	214
§22. Finite fundamental group	221
§23. Splitting	257
§24. Higher signatures	269
§25. The 4-periodic theory	284
§26. Surgery with coefficients	302
Appendix A. The nonorientable case	307
Appendix B. Assembly via products	317
Appendix C. Assembly via bounded topology	323
Bibliography	343
Index	354
