

---

## INDEX

---

**A**

acting group, 2  
 action, 1  
 Adjan, S. I., 113  
 algebraic closure operation, 156  
   with finite basis property, 156  
 almost surjective homomorphism,  
   169  
 Amitsur–Levitzky Theorem, 9  
 axiomatic rank, 18

**B**

basis rank, 19  
 Bergman, G. M., xiii, xiv, 49,  
   147, 165, 166  
 Birkhoff, G., ix  
 Birkhoff Theorem, 13  
 bivariety, 183  
 Bryant, R. M., 110  
 Bryce, R. A., x  
 Burnside variety, 38

**C**

Cartesian product of representa-  
   tions, 4  
 category of representations, 3  
 Cherlin, G., xiv  
 closed class of simple representa-  
   tions, 108  
 closure operation, 4  
 Cohen, D. E., 146, 156, 159, 161  
 Cohn, P. M., 94  
 comonolith, 101

completely invariant ideal, 6  
 Cross, D. C., 100

**D**

Dedekind domain, 168  
 dimension subgroup, 186  
 Dimension Subgroup Conjecture,  
   186  
 direct product of representations, 12

**E**

endomorphism of representations, 3  
 Engel identity, 76  
 equivalence of representations, 3  
 exponential growth of a function, 97

**F**

factor (=section) of a representa-  
   tion, 100  
   proper, 100  
 factor-representation, 3  
 faithful image of a representation, 2  
 Fox, R. H., xiii, 23  
 Fox derivation, 24  
   of higher degree, 25  
 Fox fundamental formula, 25  
 fractional ideal, 167  
   invertible, 167  
 fully invariant ideal, 6

**G**

Gaschütz, W., 121  
 generalized euclidean ring, 172

Grinberg, A. S., 34, 35, 45, 54,  
56, 90

Gringlaz, L. Ya., 79, 84, 87  
 ground ring, 1

growth of a function  
 polynomial, 97  
 exponential, 97

Gupta, N. D., 186

## H

Heineken, H., 72

Higgins, P. J., 72

Higman, G., ix, 30, 35, 156

homogeneous component (word,  
 element) 29, 41

homomorphism of representations, 2  
 right, 3

## I

ideal

augmentation, 6  
 fractional, 167  
 fully invariant (=completely  
 invariant, verbal), 6  
 homogeneous, 41

identity, 5

homogeneous, 41  
 multihomogeneous, 41  
 multilinear, 147–49  
 permutation, 162  
 quasi-multilinear, 148  
 standard, 147

irreducible centralizer, 116

isomorphism of representations, 3

## J

Jacobson, N., xiii

Jacobson domain, 182

Jennings, S. A., 186–88

join of varieties, 15

just-non-Cross variety, 182

## K

Kaloujnine, L. A., x, 7, 124, 186

Kemer, A. R., xii, 146, 155

kernel, of a representation, 2  
 of a homomorphism, 3

Kleiman, Yu. G., 46

Kolchin, E., x, 8, 71, 162

Kovács, L. G., xii, 102, 104, 114,  
117, 183

Krasil'nikov, A. N., 147, 148, 161,  
180

Krop, L. E., 45, 54

Kushkuley, A. H., 187

## L

lattice

of varieties, 15  
 of subvarieties in  $\omega\Theta$ , 109

Latyshev, V. N., 163

left order function, 91

Lewin, J., 49, 94, 165, 180

linearization

full, 43  
 partial, 150

Lyons, R., xiv, 120

## M

Magnus, W., xi, 23, 28, 29, 186

Magnus embedding, 28

Mal'cev, A. I., ix, xi, 40, 162,  
186–88

meet (=intersection) of varieties, 15

Miller, M., xiv

minimal realization of a represen-  
 tation, 103

module of a representation, 2

monolith, 101

monomial, in  $K\langle\langle Z \rangle\rangle$ , 29

in  $KG$ , 30

monomorphism of representations, 3

multihomogeneous component, 41

**N**

- Nagata, M., 77  
 Neumann, B. H., ix  
 Neumann, H., ix, xii  
 Neumann, P. M., 99  
 Neumanns–Shmel’kin Theorem, 164  
 Newman, M. F., 102, 104, 114, 117, 183  
 Nguyen Hung Shon, xii, 114, 134  
 Noncriticality Lemma, 124  
 normal polynomial, 34  
 normal word, 56

**O**

- Oates, S., xii, 113, 114, 122, 124  
 operation on classes, 4  
   closure, 4  
 Ol’shansky, A. Yu., x, 90, 93, 113, 183–85  
 order of a representation, 80  
 order function  
   right, 91  
   left, 92

**P**

- partially well-ordered set, 156  
 Passman, D. S., 143  
 Plotkin, B. I., ix, x, 108, 113, 143, 166, 181, 186, 188  
 polynomial growth of a function, 97  
 Powell, M. B., xii, 113, 114, 122, 124  
 product  
   of operations, 4  
   of varieties, 14

**R**

- radical of a representation, 101  
 rank

- axiomatic, 18  
 basis, 19  
   of a free representation, 11  
 Razmyslov, Yu. P., x  
 Razmyslov–Kemer–Braun Theorem, 180  
 realization of a representation, 103  
   minimal, 103  
 representation, 1  
   comonolithic, 101  
   critical, 100  
   faithful, 2  
   finite, 80  
   finitely generated, 80  
   free, 11  
     cyclic, 11  
     of a variety, 11  
   locally finite, 80  
   locally finite-dimensional, 80  
   locally stable, 84  
   modular, 106  
   monolithic, 101  
   ordinary, 106  
   pure, 165  
   Q-critical, 101  
   regular, 2  
   residually stable, 44  
   S-critical, 101  
   simple, 106  
   stable, 7  
   trivial (=unit), 2  
   unipotent, 8  
   zero, 2  
*R*-representation over a field, 22  
 right order function, 91  
 Rips, E., 186

**S**

- semigroup of varieties, 14–15  
 Slin’ko, A. M., xiv  
 socle, 109

Specht, W., ix  
 standard polynomial (=identity),  
 147  
 subrepresentation, 3  
 support, 30, 56

**T**

Taft, E. J., xiv  
 Tarsky, A., ix  
 Taylor series, formal, 28  
 Thomas, S., xiv  
 Three Subgroup Lemma, 122  
*T*-ideal, 48  
 triangular product, 181  
 type of a normal word, 70

**U**

Unipotency Problem, 9, 71

**V**

variety, 5  
 Cross, 134  
 finitely based, 15  
 homogeneous, 41  
 just-non-Cross, 182  
 locally finite, 82  
 locally finite-dimensional, 82

Magnus, 44  
 multihomogeneous, 41  
 of bounded rank, 134  
 of group type, 9, 55  
 of ring type, 55  
 pure, 147  
 Specht, 15  
 stable, 8, 33  
 trivial, 9  
 unipotent, 8  
 Vaughan-Lee, M. R., 19, 113  
 verbal, 10  
 Volkov, M. V., 151  
 Vovsi, S. M., 49, 60, 70, 78, 108,  
 109, 115, 122, 134, 151, 172,  
 181, 188

**W**

Wilson, R. L., xiv  
 word, 41  
 homogeneous, 41  
 multihomogeneous, 41  
 multilinear, 147–49  
 normal, 42  
 special, 78

**Z**

Zel'manov, E. I., xi, 34, 71, 77
