Preface	xi
From the preface to <i>Skew Field Constructions</i>	xiii
Note to the reader	xv
Prologue	1
<b>1 Rings and their fields of fractions</b>	<b>3</b>
1.1 Fields, skew fields and near fields	3
1.2 The general embedding problem	8
1.3 Ore's method	14
1.4 Necessary conditions for a field of fractions to exist	19
1.5 Stable association and similarity	24
1.6 Free algebras, firs and semifirs	34
1.7 The matrix reduction functor	41
Notes and comments	45
<b>2 Skew polynomial rings and power series rings</b>	<b>47</b>
2.1 Skew polynomial rings	47
2.2 The ideal structure of skew polynomial rings	56
2.3 Power series rings	66
2.4 Group rings and the Malcev–Neumann construction	71
2.5 Iterated skew polynomial rings	78
2.6 Fields of fractions for a class of filtered rings	83
Notes and comments	91
<b>3 Finite skew field extensions and applications</b>	<b>93</b>
3.1 The degree of a field extension	93
3.2 The Jacobson–Bourbaki correspondence	96
3.3 Galois theory	100
3.4 Equations over skew fields and Wedderburn's theorem	111
3.5 Pseudo-linear extensions	118

viii	Contents	
3.6	Quadratic extensions	126
3.7	Outer cyclic Galois extensions	133
3.8	Infinite outer Galois extensions	140
3.9	The multiplicative group of a skew field	143
	Notes and comments	150
<b>4</b>	<b>Localization</b>	<b>152</b>
4.1	The category of epic $R$ -fields and specializations	153
4.2	The matrix representation of fractions	157
4.3	The construction of the localization	162
4.4	Matrix ideals	171
4.5	Universal fields of fractions	177
4.6	Projective rank functions and hereditary rings	184
4.7	Normal forms for matrix blocks over firs	196
	Notes and comments	200
<b>5</b>	<b>Coproducts of fields</b>	<b>202</b>
5.1	The coproduct construction for groups and rings	203
5.2	Modules over coproducts	210
5.3	Submodules of induced modules over a coproduct	214
5.4	The tensor ring on a bimodule	224
5.5	HNN-extensions of fields	231
5.6	HNN-extensions of rings	239
5.7	Adjoining generators and relations	242
5.8	Derivations	250
5.9	Field extensions with different left and right degrees	259
5.10	Coproducts of quadratic field extensions	268
	Notes and comments	275
<b>6</b>	<b>General skew fields</b>	<b>278</b>
6.1	Presentations of skew fields	279
6.2	The specialization lemma	283
6.3	Normal forms for matrices over a tensor ring	292
6.4	Free fields	301
6.5	Existentially closed skew fields	308
6.6	The word problem for skew fields	317
6.7	The class of rings embeddable in fields	326
	Notes and comments	329
<b>7</b>	<b>Rational relations and rational identities</b>	<b>331</b>
7.1	Polynomial identities	331
7.2	Rational identities	335
7.3	Specializations	340
7.4	A particular rational identity for matrices	345
7.5	The rational meet of a family of $X$ -rings	348
7.6	The support relation on generic division algebras	355
7.7	Examples of support relations	362
	Notes and comments	365

<b>8 Equations and singularities</b>	<b>366</b>
8.1 Algebraically closed skew fields	367
8.2 Left and right eigenvalues of a matrix	374
8.3 Normal forms for a single matrix over a skew field	379
8.4 Central localizations of polynomial rings	386
8.5 The solution of equations over skew fields	395
8.6 Specializations and the rational topology	401
8.7 Examples of singularities	408
8.8 Nullstellensatz and elimination	411
Notes and comments	418
<b>9 Valuations and orderings on skew fields</b>	<b>420</b>
9.1 The basic definitions	421
9.2 Abelian and quasi-commutative valuations	427
9.3 Matrix valuations on rings	435
9.4 Subvaluations and matrix subvaluations	442
9.5 Matrix valuations on firs	449
9.6 Ordered rings and fields	457
9.7 Matrix cones and orderings on skew fields	462
Notes and comments	469
Standard notations	473
List of special notations used throughout the text	475
Bibliography and author index	478
Subject index	495
