Preface	ix
Notation	xi
Chapter 1. Diophantine approximation and manifolds	1
1.1. Introduction	1
1.2. Diophantine approximation in one dimension	1
1.3. Approximation in higher dimensions	5
1.4. Euclidean submanifolds	11
1.5. Metric Diophantine approximation on manifolds	19
1.6. Notes	25
Chapter 2. Khintchine's and Groshev's theorems for manifolds	27
2.1. Introduction	27
2.2. Extremal manifolds	27
2.3. Khintchine and Groshev type manifolds	29
2.4. Baker's conjecture	30
2.5. Higher dimensional manifolds	48
2.6. Notes	56
Chapter 3. Hausdorff measure and dimension	58
3.1. Introduction	58
3.2. Hausdorff measure	58
3.3. Hausdorff dimension	62
3.4. Properties of Hausdorff dimension	65
3.5. Determining the Hausdorff dimension	67
3.6. Hausdorff dimension on manifolds	73
3.7. Notes	74
Chapter 4. Upper bounds for Hausdorff dimension	77
4.1. Introduction	77

4.2. Diophantine approximation on manifolds	82
4.3. Smooth manifolds of dimension at least 2	85
4.4. Simultaneous Diophantine approximation	92
4.5. Notes	98
Chapter 5. Lower bounds for Hausdorff dimension	99
5.1. Introduction	99
5.2. Regular systems	99
5.3. Ubiquitous systems	106
5.4. Simultaneous Diophantine approximation on manifolds	117
5.5. Notes	122
Chapter 6. Diophantine approximation over the p-adic field	124
6.1. Introduction to p -adic numbers	124
6.2. Diophantine approximation in \mathbb{Q}_p	126
6.3. Integral polynomials with small p -adic values	127
6.4. Notes	136
Chapter 7. Applications	137
7.1. Introduction	137
7.2. Diophantine type and very well approximable numbers	138
7.3. A wave equation	139
7.4. The rotation number	140
7.5. Dynamical systems	143
7.6. Linearising diffeomorphisms	148
7.7. Diophantine approximation in hyperbolic space	151
7.8. Notes	159
References	161
Index	171
