

INDEX

- Abel
 behaviour on circle of convergence, 67, 100
 brilliant stroke, 155
 convergence test, 67
 integral equation, 277, 281–3
 summation formula, 66, 80
 theorem on product of series, 100
- African Eve, 371
- almost periodic functions, 36–8, 133
- Apéry, ‘Miraculous demonstration’, 172–3
- approximation (*see* rate of convergence)
- Bachelier, vindicated, 375–7
- band limited functions, 231–5, 241–3
- Bernoulli
 justifiable pride, 69
 numbers (*see also* Euler–Maclaurin formula), 68–71, 78, 222–3, 263–4
 polynomials, 68–71, 73–4, 76
- Bernstein
 approximation theorems, 41–3, 54
 polynomials, 25–6, 246
 inequalities, 10, 176, 188–9, 240–1
- Bessel functions, 321–5
- Beta function, incomplete, Phillip Hall’s view of, 275
- Beta function, 273–5
- Beukers, proof of Apéry’s result, 173–5
- black boxes, 226–9, 294–7
- blown up, Gibbs phenomenon, 59
- bounded variation, functions of, 55–8, 204–5
- Brent and Salamin, computation of pi, 333–4
- Brownian motion
 construction of, 366–9
 Fourier series of, 372
 Lévy’s theorem on uniqueness of, 374–7
 nowhere differentiable, 371–2
- Byrnes, hosts hostile tribes, 242
- Cantor
 existence of transcendentals, 144–5
 uniqueness theorem, 111–3
- Carathéodory’s lemma for convex sets, 185
- CAT (computer assisted tomography), 318–9
- causality conditions, 229, 234–6, 294
- central limit theorem, 51
- champagne, good, offer of, 139
- change, how to count, 259–62
- change of variable for Fourier transform, 314
- Chebychev (*see* Tchebychev)
- compact discs (articles of commerce), 234
- concave function, Jensen’s inequality for, 124–5
- convergence of Fourier sums, 55–8, 200, 203–5
- convex function (*reverse sign and see* concave function)
- convex sets, 122–3, 185–6
- crinkles in nature, 140, 143
- cyber-punk Tripos question, 371
- de la Vallée-Poussin, prime number theorem, 358–65
- de Moivre’s theorem, 78–80
- depression, text book induced, 151
- difference equation, linear, how to solve, 13–14
- Dido’s problem, 218
- differential equations
 elementary functions, used to define, 88–91
 existence of solutions for, 85–9
 linear, how to solve, 15, 248–9
 numerical solution of, 93–4
 rate of growth of solutions for, 91–3
- Dirichlet
 convergence test, 66
 evaluation of Gauss sum, 329
 lemma on approximation, 34–5, 299

- Dirichlet (*cont.*)
 original proof of convergence of Fourier sums, 203–5
 pigeonhole principle, 35
 series, 352, 356–7
- Dirichlet problem
 Neuman problem, related to, 107–10
 obviously soluble on physical grounds, 115–6
 obviously not soluble on physical grounds, 116–7
 punctured plane, solution for, 106
- divergent Fourier series
 Fejér's example, 80–1
 Kahane and Katznelson, theorem of, 82–4
 Kolmogorov's everywhere divergent example, 301–5
 rate of divergence, 64–6, 202
- divergent Fourier transform, 190
- doubly periodic functions (*see* elliptic functions)
- eigenvalues via minimisation, 157–63
- elliptic functions
 properties and constructions, 147–55, 236–9
 why so called, 155
- elliptic integrals
 link with elliptic functions, 155
 spectacular use of, 332–334
- equidistribution, 11–13, 15–16, 130–3
- Euler
 conjectures law of quadratic reciprocity, 339
 equality (four squares), 300–1
 formula for Bernoulli numbers, 70, 222–3, 263–4
 gamma, 292, 349, 350, 354
 infinite product for sine, 285–6
 neat formula of, 56
 superstar of superstrings, 275
 Taylor series for tan, 70
 totient function, 335
 zeta of even integers, 68, 222–3
- Euler–Maclaurin summation formula, 61–2, 71–7, 131, 350, 353–4
- factorial function (*see* gamma function)
- feedback (*see* black boxes)
- Fejér, 11, 80–1, 181–3
- Feller, proof of Stirling's formula, 290–1
- Feynman, anecdote, 207
- fractional integral, 275–7, 281–3
- function (*see under specific name*)
- gamma, Euler's, 292, 349, 350, 354
- gamma function
 and Beta function, 273–4
 definition, 270
 duplication formula, 271–3, 288–90
 factorial, natural extension of, 271–3
 formula involving, 277
 (*see also* fractional integrals, Watson's lemma)
- Gauss
 computation of pi, 284, 331–4
 formula for factorial function, 272–3
 proves law of quadratic reciprocity at age nineteen, 338–9
 sum, 326–30, 339
 generalised limit, 7–8
 Gibbs's phenomenon, 59–60, 63–6
- Green's function
 in complex variable theory, 120
 found by firing pistol, 228
 passing mention, 163, 225
 as transfer (or response) function, 226–9, 294–9
- Gröchnig's algorithm for signal reconstruction, 241–3
- Guinness, does good by stealth, 309
- Hadamard
 gap theorem for natural boundaries, 266–7
 prime number theorem, 358–65
- Hahn–Banach theorem in finite dimensions, 123–4
- Halmos, insufficiently asked question of, 39
- Hardy
 nowhere differentiable function, 46–7
 test integral, 60, 208–9
 transcendence of gamma, reward offered, 349
- Hardy and Littlewood
 inequality, 129
 Tauberian theorem, 102
- harpsichord, 97–8
- Harvard, mathematicians, mannerisms of, 45
- Hausdorff moment theorem, 30–1
- Hausdorff–Young inequality, 136–9
- Herglotz theorem on positive definite sequences (simple version), 319–20
- Hermite, quadrature formula, 188
- Heisenberg inequality (uncertainty principle), 230–1
- high definition TV, 50
- how to
 be almost sure a number is prime, 342–3
 build a harpsichord, 97–8
 conduct life, 318
 count change, 259–62
 expand in partial fractions, 255–6
 gamble, if you must, 311–12
 solve a linear difference equation, 13–14

- solve a linear differential equation, 15,
 184–5
 value stock options, 377
 how not to
 index a book, 381–5
 interpolate with polynomials, 170, 179–83
 throw dice, 310
 write out a theorem (see reference in
 Question 79.8), 301
 Huygens, practical and theoretical work on
 pendulum clock, 281–3

 inclusion–exclusion formula, 348
 inequality
 Bernstein (trigonometric polynomials), 10,
 176, 188–9
 Bernstein (band limited functions), 240–1
 Bessel, 133
 Cauchy (arithmetic-geometric), 124
 Cauchy, Schwarz, Buniakowski, 122
 Hardy and Littlewood, 129
 Hausdorff–Young, 136–9
 Heisenberg, 230–1
 Hilbert, 128–9
 Hölder, 125
 Hölder, converse, 126
 Jensen (zeros of analytic functions), 114–15,
 288
 Jensen (concave functions), 124–5
 Tchebychev (probability), 25, 79, 197–8
 Tchebychev (polynomials), 188–9
 triangle, 122, 125, 240
 Van der Corput (first and second), 129–31
 Van der Corput (related to equidistribution),
 130–1
 Wirtinger, 140, 162, 239–40
 infinite products, 77, 284–91
 insects, love life of, 214, 302
 interpolation by polynomials, 25–7, 170,
 178–83
 interpolation formula of Rivlin and Shapiro,
 185–9

 Jackson approximation theorems, 41, 43–5, 54
 Jacobi
 computation of Legendre symbol, 340–2
 identity, 238–9, 354–6
 remainder in Euler–Maclaurin formula, 73
 symbol, 340–2
 theta function, 236–9
 jigsaw puzzle, mathematician’s, 231

 Kahane, beautiful probabilistic arguments, 261,
 371–2
 Kahane and Katznelson, divergent Fourier
 series, 82–4

 Karamata, proof of Tauberian theorem, 102–3
 Katznelson (*see* Kahane and Katznelson)
 Kolmogorov
 everywhere divergent Fourier series, 301–5
 zero-one law, 267–9
 Kramers–Krönig (causality) relations, 234–6
 Kronecker’s theorem (on simultaneous
 approximation)
 another proof, 337
 used, 301–5

 lacunary series, 266–70
 Lagrange’s four squares theorem, 300–1
 Landau
 driven out of Göttingen, 91
 sage advice, 41
 Laplace transforms
 convolution, for, 257–8
 delicate treatment of, 363–4
 partial differential equations, used with, 258
 warning, 93
 (*see also* Watson’s lemma)
 Lattès, remarkable rational function, 153–4
 Lebesgue
 proof of Weierstrass theorem, 27–8
 thorn, 115–17
 Legendre symbol, 338–43, 345–6
 Lerch’s theorem, by complex variable, 287,
 288
 Lévy’s theorem on uniqueness of Brownian
 motion, 374–6
 Lipschitz condition, 87–8
 Littlewood
 obiter dicta, 138, 301
 (*see also* Hardy and Littlewood)

 matrices, fun with, 95–6, 157–8, 248–51, 301,
 307–8, 314, 327–8
 mean value theorems for integrals, 67, 202–3
 Mellin transform, 343–4, 351–2
 Minkowski
 inequality, 125
 theorem on geometry of numbers, 299–301
 Monte Carlo method, 51–2
 Mordell
 neat evaluation, 198
 proof of Hadamard gap theorem, 266–7
 suitable thesis topic, 349

 natural boundary for analytical functions,
 264–70, 286
 Neumann problem, 107–10
 Newman D. J., makes hard things less hard,
 333–4, 363–4
 Newton, sums of powers of roots, 15–16

- Newton–Cotes formula, problems with, 169–70, 278–9
- nowhere differentiable functions
 Brownian motion, 371–2
 Hardy, 46–7
 Van der Waerden, 48
 Weierstrass, 46–7
- numerical analysts, wise sayings of, 43, 169
- numerical quadrature (integration), 168–70, 180, 278–9
- Nyquist
 criterion for feedback, 296–7
 rate for signal transmission, 231–2, 241–2
- oven, microwave, unsatisfactory, 33
- Pál, interpolation by polynomials with integer coefficients, 26–27
- Parseval's equality for Fourier transforms, 224, 240–1
- partial fractions
 how to get, 255–6
 not as boring as they look, 260–1
- Paley–Wiener type theorem, 234
- Peano
 kernel theorem, 21–3
 space filling curve, 49–50
- pendulum clock, 281–83
- periodicities, hidden, 34
- pi, computation of, 77, 284, 331–4
- Pisot number, 15–6
- Poisson
 formula, 61, 222, 231, 239
 summation, 100, 103–5
- Pólya
 infinity of primes, 211
 numerical quadrature, 169–70, 278–9
 random walks, 312–3
- polynomial
 Bernoulli, 68–71, 73–4, 76
 Bernstein, 25–26, 246
 Laguerre, 166–7
 Legendre, 164–6, 175
 Rudin–Shapiro, 138–9
 Tchebychev, 25, 105, 168–9, 188–9
- polynomials
 interpolation by, 25–27, 170, 178–83
 sums of powers of roots, 15–16
- population
 explosion, 370
 oscillation, 251–3
- positive definite quadratic
 forms, 95–6
 sequences, 319–20
- potatoes, two, and string, what to do with, 98–9
- primes, infinity of
 Euclid, 211
 Pólya, 211
- prime number theorem, full, of Hadamard and de la Vallée-Poussin
 proved, 358–65
 used, 173–5
- prime number theorem, limited, of
 Tchebychev
 proved, 171–3
 used, 343, 362–3
- prime numbers, probabilistic test for, 342–3
- radar, electronically steered, 315–17
- Radon transform, 318–19
- random series
 construction of Brownian motion using, 366–9
 example given by Fourier series of Brownian motion, 372–4
 Taylor, and natural boundaries, 269–70
- random walk returns, 312–3
- rate of convergence of approximations, 41–5, 53–4
- reconstruction of band limited signals, 231–4, 241–3
- response function (transfer function), 226–9, 294–7
- Richardson L. F., deferred approach to the limit, 73, 75
- Riemann
 Fourier series, work on, 111–13
 fractional integrals, 275–9
 functional equation for zeta, 354–6
 hypothesis, 361, 364–5
 localisation (weak version), 201
 mapping theorem, 118–21
 thesis report on, 121
 zeta function (*see main entry*)
- Riemann integral, unsatisfactory, 127–8, 135
- Riemann–Lebesgue lemma, 10, 200–1, 220
- Rivlin and Shapiro interpolation formula, 185–9
- Salamin (*see Brent and Salamin*)
- Schur I.
 evaluation of Gauss sum, 326
 proof of two inequalities of Hilbert, 128–9
 theorem on making change, 259–61
- set theory, origin of, 113
- Shannon sampling theorem, 231–4
- Shapiro
 MSc thesis, 138
 (*see also Rivlin and Shapiro*)
- Simpson's rule, error bounds for, 22–3

- Smith
 genealogy applied to Brownian motion, 371–2
 why are we all called, 371
 why are we not all called, 369–71
 smoke rings, 216
 Solvay and Strassen's probabilistic test for primes, 342–3
 space filling curve of Liu Wen, 49–50
 sphere
 heating and cooling, 32–3, 216–8
 volume of n dimensional, 193, 274
 Steinhilber theorem on natural boundaries, 269–70
 Stirling's formula
 proved, 76–7, 290–1
 used, 78, 79–80, 180, 278, 333
 structure of
 finite Abelian groups, 345
 group of units, 345–6
 Student's t test, 308–9

 general, 1–8
 Poisson, 100, 103–5
 Toeplitz, 4
 symmetries for Fourier transforms, 314

 tank, hot water, 215
 Tauberian theorems, examples of, 102–3, 362
 tautochrone, 281–3
 Taylor series,
 interesting, 70–1
 random, 269–70
 Taylor's theorem
 counter examples, 18, 209–10
 proofs, 18–21, 180
 used, 93–4
 Tchebychev
 prime number theorem, 171–73
 (see also under polynomial and inequalities)

 term by term differentiation of power series, 192, 262
 theta function, 236–9
 theses, out of the ordinary, 111–13, 118–21, 138, 349
 transfer function (response function), 226–9, 294–7

 uncertainty principles, 234, 315–17

 Varopoulos, typically ingenious argument of, 337–8
 Vieta's infinite product for pi, 284
 Volterra's predator–prey equations, 251–3

 Wallis's infinite product for pi, 77
 Watson's lemma, 279–81, 324–5
 wavelets (simplest version), 183–4
 Weierstrass
 analytic function with prescribed zeros, 286
 curly P function, 152–4
 M-test, 39–40
 Riemann's use of Dirichlet's principle, views on, 118, 140
 Weierstrass's polynomial approximation theorem
 another proof, 219
 Bernstein's proof, 25–6
 Fejér, incidental proof of, 182–3
 Lebesgue's proof, 27–29
 in two dimensions, 301
 must be modified for complex case, 21
 Wen, Lui, space filling curve, 49–50
 Weyl's criterion, 11
 worm's life, a, 32, 142–3
 wrong envelope problem, 16–17, 198, 348
