

## Contents

<b>Preface</b>	5
<b>Chapter 1 B-splines</b>	9
1.1 Piecewise polynomial functions	9
1.2 An example: Cubic splines	10
1.3 B-splines: Fundamental properties	14
1.4 The B-spline basis of $\mathcal{P}_{k,\tau,r}$	20
1.5 Basic Algorithms for B-splines	24
1.6 Approximation by a spline curve	31
1.7 Divided differences	34
<b>Chapter 2 Spline curves and Bézier curves</b>	39
2.1 Bernstein polynomials	39
2.2 B-spline curves	42
2.3 Algorithms for spline curves	46
<b>Chapter 3 Interpolation and complements</b>	67
3.1 Interpolation	67
3.2 Other properties of the matrix $N$	70
3.3 Matrix representation	72
3.4 Junction between two curves	76
3.5 Rational curves	85

<b>Chapter 4</b>	<b>Spline Surfaces</b>	95
4.1	Tensor products	95
4.2	Particular case of Bézier surfaces	99
4.3	Interpolation and approximation	104
4.4	Bernstein polynomials	107
4.5	Triangular Bézier patches	109
4.6	Junction between Bézier patches	116
4.7	Base points of rational Bézier patches	119
4.8	Polyhedral splines	128
4.9	Box splines	138
<b>Chapter 5</b>	<b>Triangulations</b>	147
	Introduction	147
5.1	Voronoi diagram	148
5.2	Generalities about triangulations	152
5.3	Delaunay triangulations	157
5.4	Construction Algorithm	165
5.5	Remarks about complexity	171
<b>Chapter 6</b>	<b>Notions of real algebraic geometry</b>	175
6.1	Roots of one variable polynomials	175
6.2	Resultants and discriminants	180
6.3	Notions of semi-algebraic sets	184
<b>Plates</b>		187
<b>Bibliography</b>		193
<b>Index</b>		195
