<i>Preface</i>	xi
<i>Acknowledgements</i>	xiii
1 CLASSICAL FLUIDS	1
1.1 The distribution function	1
1.1.1 Number density and mean quantities	1
1.1.2 Transport fluxes	2
1.1.3 Multicomponent fluids	5
1.1.4 Boltzmann's equation	7
1.2 Macroscopic implications	8
1.2.1 Continuity equations	8
1.2.2 The equation of motion	10
1.2.3 The energy balance equation	12
1.2.4 Fluid dynamic equations	13
1.3 The zeroth-order approximation. Perfect fluids	13
1.3.1 Euler's equations	14
1.3.2 Basic astrophysical applications	15
1.4 First-order approximation. Imperfect fluids	20
1.4.1 Diffusion	20
1.4.2 Viscosity and heat conduction	23
1.4.3 Approximate values of transport coefficients	24
1.4.4 Navier–Stokes equations	25
1.4.5 Entropy variations of an imperfect fluid	25
1.5 Turbulence	27
1.5.1 Hierarchy of turbulent motions	28
1.5.2 The mean flow equations	29
1.5.3 Turbulent transport fluxes	33
2 RELATIVISTIC FLUIDS	35
2.1 The distribution function	35
2.1.1 Transport fluxes	36
2.1.2 Perfect fluids	37
2.1.3 Boltzmann's equation	39
2.2 Macroscopic implications	40
2.2.1 The continuity equation	40

viii *Contents*

2.2.2	Equation of energy-momentum conservation	42
2.2.3	Entropy variations of a perfect fluid	44
2.2.4	Sound	45
2.3	General relativistic fluid dynamics	46
2.3.1	Fluid dynamic equations	47
3	PHOTON FLUIDS	50
3.1	The distribution function	50
3.1.1	Transport fluxes	51
3.1.2	Observational aspects	54
3.1.3	Boltzmann's equation	57
3.2	Macroscopic equations	60
3.2.1	The energy flux equation	60
3.2.2	The momentum flux equation	61
3.3	The black body	62
3.3.1	Boltzmann's solution	62
3.3.2	Entropy of black bodies	63
3.3.3	The black body in motion	64
3.4	Solutions near thermodynamic equilibrium	65
3.4.1	Perfect photon fluids	65
3.4.2	The diffusion approximation	65
3.4.3	The grey body	66
3.4.4	Mean opacities	67
3.5	Basic astrophysical applications	68
3.5.1	Stellar and planetary atmospheres	68
3.5.2	Energy flux in stellar interiors	73
3.5.3	Interstellar extinction	74
3.6	Classical fluids in a radiation field	75
4	PLASMA FLUIDS	77
4.1	Introduction	77
4.1.1	Cyclotron and collision frequencies	77
4.1.2	Maxwell's equations	78
4.2	Macroscopic equations	80
4.2.1	Continuity equations	80
4.2.2	The equation of motion	81
4.2.3	The energy balance equation	82
4.3	Diffusion	82
4.3.1	Ohm's law	83
4.3.2	Ambipolar diffusion	86
4.3.3	The electric field of an atmosphere	87
4.4	Magnetohydrodynamics	88
4.4.1	Magnetohydrostatics	91

<i>Contents</i>	ix
4.4.2 The Virial theorem for continuous and magnetized systems	92
4.4.3 Alfvén waves	95
4.5 Synchrotron radiation	97
5 THE FLUID IN A STAR	101
5.1 Main-sequence stars	101
5.1.1 Hydrostatics of a normal star	102
5.1.2 A rough solution	104
5.1.3 Some properties of normal stars	105
5.2 White dwarfs	107
5.2.1 Statistical mechanics of degenerate stars	108
5.2.2 Hydrostatics of white dwarfs	114
5.3 Polytropic stars	116
5.4 The metric of a star	119
5.4.1 The metric around a star	119
5.4.2 Properties of the external Schwarzschild metric. Black holes	122
5.4.3 The metric inside a star	126
5.4.4 Gravitational mass limit	128
5.5 Stellar evolution	130
6 THE FLUID OF STARS	133
6.1 The fluid of stars	133
6.2 Observations in our Galaxy	134
6.2.1 Density	135
6.2.2 Peculiar velocities	136
6.2.3 Mean velocities	138
6.2.4 The velocity gradient	140
6.3 Relaxation time	142
6.4 Stellar hydrodynamics	144
6.4.1 The equation of vertical motion	145
6.4.2 Radial motion	146
7 ASTROPHYSICAL PLASMA FLUIDS	147
7.1 Introduction	147
7.2 The Sun	147
7.2.1 The mean field	149
7.2.2 Transient phenomena	151
7.3 The galactic gas	155
7.3.1 The galactic dynamo	158
7.3.2 Large-scale hydrodynamics	161
7.3.3 Cloud collapse and star formation	164
7.3.4 Accretion discs and jets	170

x *Contents*

8 THE NEWTONIAN COSMIC FLUID	172
8.1 The continuity equation	174
8.2 The motion equation	175
8.3 The heat balance equation	178
8.4 Epochs of the Universe	179
8.5 The Milne universe	181
9 THE RELATIVISTIC COSMIC FLUID	184
9.1 The cosmological principle	184
9.2 The Robertson–Walker metric	185
9.2.1 The radius of a closed universe	186
9.2.2 Comoving coordinates	187
9.3 The cosmological redshift	188
9.4 The proper distance to a galaxy	189
9.4.1 Luminosity distance	190
9.4.2 Diameter distance	192
9.5 Approximate relations	192
9.6 The Universe as a perfect fluid	194
9.6.1 The equation of continuity	194
9.6.2 The energy-momentum equation	194
9.6.3 Entropy	195
9.7 Einstein’s field equations	198
9.8 The matter-dominated era	200
9.8.1 Friedmann models	201
9.8.2 Distances	204
9.8.3 The horizon	205
9.8.4 Numerical examples	206
9.8.5 The curved Universe	207
9.9 The radiation-dominated era	207
9.10 The microwave background radiation	208
10 THE FLUID OF GALAXIES	210
10.1 Main properties	210
10.2 The birth of galaxies	213
10.2.1 The galactic Jeans mass	213
10.2.2 The mass of a galaxy	218
10.2.3 The growth of perturbations	220
<i>Appendix</i>	228
<i>Bibliography</i>	229
<i>Index</i>	236
