	Preface	page xi
	Index of main symbols	xiii
1	Introduction	1
1.1	The classical period	1
1.2	The idea of incompleteness	3
	1.2.1 Formalism	4
1.3	Extendibility	6
1.4	The maximality assumption	8
1.5	Singularities	9
	1.5.1 Singularity theorems	10
	1.5.2 The nature of singularities	13
2	The Riemann tensor	16
2.1	Families of curves	17
	2.1.1 Geodesic deviation	18
2.2	Holonomy aspects	20
	2.2.1 Triangular case	28
3	Boundary constructions	30
3.1	The b-boundary	31
	3.1.1 Horizontal lifts	31
	3.1.2 <i>b</i> -equivalence	32
	3.1.3 The bundle construction	34
3.2	Structure of the b-boundary	36
	3.2.1 Fibre degeneracy	36
	3.2.2 Complete degeneracy	39
	3.2.3 Robertson-Walker metrics	40
	3.2.4 <i>LM</i> -neighbourhood structure	41
	3.2.5 Applications	43
	3.2.6 Identifications of curves	44
	3.2.7 Past and future identification	45

viii	<i>Contents</i>	
3.3	Causal boundaries	45
3.4	The definition of a singularity	50
3.5	The A-boundary	50
	3.5.1 <i>General idea</i>	51
	3.5.2 <i>Detailed construction</i>	51
	3.5.3 <i>Identification of limits</i>	53
	3.5.4 <i>Extension through the A-boundary</i>	57
	3.5.5 <i>Extension of geometrical structures</i>	59
4	Existence theory and differentiability	60
4.1	Introduction	60
4.2	Differentiability	61
	4.2.1 <i>C^k-classes</i>	62
	4.2.2 <i>Sobolev classes</i>	64
4.3	Why Sobolev spaces?	66
	4.3.1 <i>Products</i>	68
	4.3.2 <i>Functions of a function</i>	71
4.4	Energy inequalities	73
4.5	Linking equations and geometry	79
	4.5.1 <i>Discussion</i>	83
4.6	Bounds on the metric in particular charts	84
	4.6.1 <i>Normal coordinates</i>	85
4.7	Distance-function coordinates	87
	4.7.1 <i>The normal to S</i>	88
	4.7.2 <i>The curvature of S</i>	89
	4.7.3 <i>Maximal geodesics</i>	92
4.8	Smoothing	94
5	The analytic extension problem	96
5.1	Mathematical preliminaries	96
	5.1.1 <i>The Calderón-Zygmund theorem</i>	99
5.2	Extensions of functions	99
	5.2.1 <i>The Calderon extension operator</i>	99
	5.2.2 <i>Hölder norms</i>	102
	5.2.3 <i>Sobolev norms</i>	104
	5.2.4 <i>Action of singular kernel</i>	105
5.3	The Poincaré lemma	107
5.4	Extension of geometry	109
	5.4.1 <i>Extension of the connection</i>	110
	5.4.2 <i>Extension of the metric</i>	112

<i>Contents</i>		ix
6	Attributes of singularities	115
6.1	Strengths of singularities	115
	6.1.1 <i>Extension strengths</i>	115
	6.1.2 <i>Limiting strengths</i>	116
6.2	Global hyperbolicity	119
	6.2.1 <i>Basic concepts</i>	119
	6.2.2 <i>Spaces of curves</i>	120
	6.2.3 <i>Further results</i>	122
	6.2.4 <i>Global hyperbolicity and singularities</i>	122
	6.2.5 <i>The strong cosmic censorship hypothesis</i>	123
	6.2.6 <i>The significance of global hyperbolicity</i>	124
6.3	Past hyperbolicity	125
	6.3.1 <i>Basic ideas</i>	125
	6.3.2 <i>The unfolding of a quasi-regular singularity</i>	125
	6.3.3 <i>Primordial singularities</i>	128
	6.3.4 <i>Dragging geodesics</i>	134
6.4	Past simplicity	135
	6.4.1 <i>Limiting Riemann sets</i>	136
	6.4.2 <i>Specialisation</i>	137
	6.4.3 <i>Measures of specialisation</i>	138
6.5	Holes	141
	6.5.1 <i>Initial concepts</i>	141
7	Extension theorems	145
7.1	Spherical symmetry	145
	7.1.1 <i>Definition of the problem</i>	145
	7.1.2 <i>Extension in null coordinates</i>	147
7.2	The future boundary of a globally hyperbolic space-time	150
7.3	Singularity theorem	151
7.4	Conclusions	152
8	Singularity strengths and censorship	154
8.1	The weak hypothesis	154
8.2	Strong curvature and extension	157
	8.2.1 <i>Curvature conditions</i>	158
	8.2.2 <i>Extensions</i>	164
	8.2.3 <i>Persistent curvature</i>	164
8.3	Counterexamples	166
	8.3.1 <i>Free particle matter</i>	166
	8.3.2 <i>Tolman-Bondi models</i>	169
