<i>Preface to Revised Edition</i>	<i>page</i> xiii
<i>Preface to First Edition</i>	xv
<b>1 Introduction</b>	<b>1</b>
<b>2 The Einstein Equivalence Principle and the Foundations of Gravitation Theory</b>	<b>13</b>
2.1 The Dicke Framework	16
2.2 Basic Criteria for the Viability of a Gravitation Theory	18
2.3 The Einstein Equivalence Principle	22
2.4 Experimental Tests of the Einstein Equivalence Principle	24
2.5 Schiff's Conjecture	38
2.6 The $THE\mu$ Formalism	45
<b>3 Gravitation as a Geometric Phenomenon</b>	<b>67</b>
3.1 Universal Coupling	67
3.2 Nongravitational Physics in Curved Spacetime	68
3.3 Long-Range Gravitational Fields and the Strong Equivalence Principle	79
<b>4 The Parametrized Post-Newtonian Formalism</b>	<b>86</b>
4.1 The Post-Newtonian Limit	87
4.2 The Standard Post-Newtonian Gauge	96
4.3 Lorentz Transformations and the PPN Metric	99
4.4 Conservation Laws in the PPN Formalism	105
<b>5 Post-Newtonian Limits of Alternative Metric Theories of Gravity</b>	<b>116</b>
5.1 Method of Calculation	116
5.2 General Relativity	121
5.3 Scalar-Tensor Theories	123
5.4 Vector-Tensor Theories	126
5.5 Bimetric Theories with Prior Geometry	130
5.6 Stratified Theories	135
5.7 Nonviable Theories	138

Table of Contents

[More information](#)

<i>Contents</i>	x
<b>6 Equations of Motion in the PPN Formalism</b>	142
6.1 Equations of Motion for Photons	143
6.2 Equations of Motion for Massive Bodies	144
6.3 The Locally Measured Gravitational Constant	153
6.4 N-Body Lagrangians, Energy Conservation, and the Strong Equivalence Principle	158
6.5 Equations of Motion for Spinning Bodies	163
<b>7 The Classical Tests</b>	166
7.1 The Deflection of Light	167
7.2 The Time-Delay of Light	173
7.3 The Perihelion Shift of Mercury	176
<b>8 Tests of the Strong Equivalence Principle</b>	184
8.1 The Nordtvedt Effect and the Lunar Eötvös Experiment	185
8.2 Preferred-Frame and Preferred-Location Effects: Geophysical Tests	190
8.3 Preferred-Frame and Preferred-Location Effects: Orbital Tests	200
8.4 Constancy of the Newtonian Gravitational Constant	202
8.5 Experimental Limits on the PPN Parameters	204
<b>9 Other Tests of Post-Newtonian Gravity</b>	207
9.1 The Gyroscope Experiment	208
9.2 Laboratory Tests of Post-Newtonian Gravity	213
9.3 Tests of Post-Newtonian Conservation Laws	215
<b>10 Gravitational Radiation as a Tool for Testing Relativistic Gravity</b>	221
10.1 Speed of Gravitational Waves	223
10.2 Polarization of Gravitational Waves	227
10.3 Multipole Generation of Gravitational Waves and Gravitational Radiation Damping	238
<b>11 Structure and Motion of Compact Objects in Alternative Theories of Gravity</b>	255
11.1 Structure of Neutron Stars	257
11.2 Structure and Existence of Black Holes	264
11.3 The Motion of Compact Objects: A Modified EIH Formalism	266
<b>12 The Binary Pulsar</b>	283
12.1 Arrival-Time Analysis for the Binary Pulsar	287
12.2 The Binary Pulsar According to General Relativity	303
12.3 The Binary Pulsar in Other Theories of Gravity	306
<b>13 Cosmological Tests</b>	310
13.1 Cosmological Models in Alternative Theories of Gravity	312
13.2 Cosmological Tests of Alternative Theories	316

<i>Contents</i>	xi
<b>14 An Update</b>	<b>320</b>
14.1 The Einstein Equivalence Principle	320
14.2 The PPN Framework and Alternative Metric Theories of Gravity	331
14.3 Tests of Post-Newtonian Gravity	332
14.4 Experimental Gravitation: Is there a Future?	338
14.5 The Rise and Fall of the Fifth Force	341
14.6 Stellar-System Tests of Gravitational Theory	343
14.7 Conclusions	352
<i>References</i>	353
<i>References to Chapter 14</i>	371
<i>Index</i>	375
