

INDEX

- algorithm A_2 , 173
- characteristic function, 8
- classical scheme of allocation, 16
- complete description of distribution of the number of cycles, 192
- connected component, 23
- connectivity, 22
- critical graph, 91
- critical set, 125
- decomposable property, 23
- distribution function, 2
- equations involving permutations, 219
- equations of compound degree, 235
- equations of prime degree, 225
- factorial moment, 3
- feedback point, 124
- forest, 21
- forest of nonrooted trees, 30
- generalized scheme of allocation, 14
- generating function, 6
- graphs with components of two types, 70
- homogeneous system of equations, 125
- hypercycle, 126
- independent critical sets, 125
- inversion formula, 10
- length of the maximum cycle, 212
- limit distribution of the number of hypercycles, 164
- linearly independent solutions, 125
- local limit theorem, 10
- mathematical expectation, 3
- maximal span, 9
- maximum number of independent critical sets, 125, 135
- maximum size of components, 66
- maximum size of components of a random graph, 84
- maximum size of trees in a random forest, 48
- maximum size of trees in a random graph, 83
- maximum size of trees in a random graph from $\mathcal{A}_{n,T}$, 71
- mean, 3
- mean number of solutions in the equiprobable case, 132
- method of coordinate testing, 168
- multinomial distribution, 15
- multiplicity of a vertex in a set of hyperedges, 126

- nonequiprobable graph, 109
- normal distribution, 9
- number of components, 107, 144
- number of components in \mathcal{U}_n , 65
- number of cycles in a random permutation, 182, 183
- number of cycles of length r in a random permutation, 182
- number of forests, 31
- number of linearly independent solutions, 130
- number of nontrivial solutions, 131
- number of trees of fixed sizes, 71
- number of trees with r vertices, 42
- number of unicyclic components, 77, 81
- number of unicyclic graphs, 58
- number of vertices in the maximal unicyclic component, 81
- number of vertices in unicyclic components, 71, 77

- order of random permutation, 239
- order statistics, 17

- partition, 19
- permutations with restrictions on cycle lengths, 192
- Poisson distribution, 6
- probability, 1
- probability distribution, 2
- probability of consistency, 144
- probability of reconstruction of the true solution, 166
- probability space, 1
- problem of moments, 4
- process of sequential growth of the number of rows, 127

- random element, 1
- random forest, 21, 30
- random graph corresponding to random permutation, 181

- random graph of a random permutation, 182
- random graphs with independent edges, 100
- random matrices with independent elements, 126
- random pairwise comparisons, 164
- random partitions, 30
- random permutation, 28
- random variable, 1
- rank of matrix, 124
- rank of random sparse matrices, 135
- reconstructing the true solution, 165

- saddle-point method, 7, 221
- set of rooted trees, 21
- shift register, 123
- simple classification problem, 122
- single-valued mapping, 18
- statistical problem of testing the hypotheses H_0 and H_1 , 180
- subcritical graph, 91
- summation of independent random variables in $\text{GF}(2)$, 131
- supercritical graph, 91
- system of linear equations in $\text{GF}(2)$, 122
- system of random equations with distorted right-hand sides, 180
- system with at most two unknowns in each equation, 156

- threshold property, 156
- total number of components, 24
- total number of critical sets, 157
- total number of cycles, 102, 212
- total number of hypercycles, 158

- unicyclic graph, 58

- voting algorithm, 165

- weak convergence, 2
